Ersatzteile für die POWER-MAX Reihe siehe Seite 604 · Spare parts for the POWER-MAX range see page 604

20 1010

POWER-MAX
HEAVY-DUTY 10

Hartmetall-bestückte Lochsäge, Nutzlänge 12 mm.
Komplett mit Schaft, Zentrierbohrer und Auswurfeder
Carbide tipped hole saw, drill depth 12 mm | 15/32".
Completely with shank, center drill and ejector spring

Machen Sie aus Ihrer Lochsäge ein Universal-Werkzeug für nahezu alle Maschinentypen. Wählen Sie aus dem Zubehör (siehe Seite 568-569) Ihren gewünschten Schaft.

Make from the hole saw a universal tool for almost all types of machines. Choose from the accessories (see page 568-569) your suitable shank.

EIGENSCHAFTEN · PROPERTIES

Handmaschinen · Handheld machines

|---------------------------------|---------------|-----------------------------------|
| Maximal empfohlener Ø | 120 mm | Maximum recommended Ø |
| Maximal empfohlene Schnitttiefe | 6 mm | Maximum recommended cutting depth |
| Maximal mögliche Schnitttiefe | 12 mm | Maximum possible cutting depth |

Stationäre und Kernbohrmaschinen Stationary and core drilling machines

| | | |
|---------------------------------|---------------|-----------------------------------|
| Maximal empfohlener Ø | 120 mm | Maximum recommended Ø |
| Maximal empfohlene Schnitttiefe | 10 mm | Maximum recommended cutting depth |
| Maximal mögliche Schnitttiefe | 12 mm | Maximum possible cutting depth |

Extra schwere Ausführung

- Bei allen Lochsägen sind Schaft und Bohrer austauschbar
- Schnelle Bohrkernentfernung durch Auswurfeder bei allen Durchmessern

Anwendungshinweis:

Bei größeren Materialstärken pro Arbeitsgang 2-3 mm bohren, danach jeweils Späne entfernen. Bei maximalen Schnitttiefen ist die Auswurfeder zu entfernen. Verwenden Sie bitte bei allen Metallen gutes Schneidöl (siehe ab Seite 1143).

Extra heavy construction

- All hole saws come with exchangeable shank and drill
- Quick removal of drilled core through ejector spring for all hole saws

Application note:

At thicker materials: Cut 2-3 mm per cutting process, remove chips afterwards. If drilling maximum cutting depth please remove the ejector spring. Use only good cutting oil for metals (see from page 1143).

€ 6,35

20 1440
€ 3,70

20 1114
€ 4,10

Unser neuer Zentrierbohrer mit verjüngter Spitze: Für ein noch verbessertes Anbohren ohne Verlaufen. Ankörnen ist überflüssig speziell für dünne Materialien bis 3 mm. Kompaktes Werkzeug (Zentrierbohrer ragt nur ca. 10 mm über den Lochsägekörper hinaus).

Our new tapered center drill: For an even better centering without running off. Center punching is not necessary. Especially developed for thin materials up to 3 mm. Compact tool (center drill protrudes only about 10 mm beyond the hole saw body).

Ø 61-120 mm 20 1137

Ersatz-Auswerferbohrer · Spare ejector drill

20 1527
€ 2,05

Funktionsweise:

- A. Das Werkstück ankörnen. Bei weichen Materialien wie Kunststoffen, Hölzern und Holzwerkstoffen kann ggf. auf das Ankörnen verzichtet werden.
- B. Setzen Sie den Auswerferbohrer 1 genau in die Mitte des Körnerpunktes an. Zu Beginn des Bohrprozesses wenig Druck (Vorschub) anwenden, bis die Lochsäge Minimum 0,5 mm Schnitttiefe erreicht hat. Die Lochsäge hat sich nun selbst zentriert. Der Vorschub kann erhöht werden.
- C. Eine Auswurffeder 2 im Schaft erzeugt Druck auf den Auswerferbohrer 1.
- D. Der Auswerferbohrer 1 wirft den Kern 4 nach dem Durchbohren aus. (Sollte der Kern nicht ausgeworfen werden, erhöhen Sie bitte den Federdruck am Auswerferbohrer durch drehen der Inbusschraube 3 im Uhrzeigersinn).

Vorteile:

1. Nach dem Bohren wird der Kern zuverlässig ausgeworfen.
2. Passt auf alle POWER-MAX Lochsägen ab Durchmesser 14 mm (Seite 564).
3. Da der Auswerferbohrer nicht das Material durchbohrt (wie sonst üblich bei Lochsägen mit Zentrierbohrern) entsteht ein kontinuierlicher Bohrvorgang.

Das unvermeidliche „Aufschlagen“ der Lochsäge nach dem Durchbrechen des Zentrierbohrers auf das Werkstück entfällt (Hauptgrund für Zahnbruch an der Lochsäge).

Operating mode:

- A. Center punch the work piece. Soft materials such as plastics, wood and wood based materials can possibly be done without the center punch.
- B. Place the ejector drill 1 in the middle of the center mark. Use little pressure (feed rate) until the hole saw reaches a minimum cutting depth of 0,5 mm. The hole saw in self-centered now. Feed rate can be increased.
- C. An ejector spring 2 which is installed in the arbor puts pressure on the ejector drill 1.
- D. The ejector drill 1 ejects the core 4 after drilling process. (If the core will not be ejected, please increase the spring pressure on the ejector drill by turning the Allen screw 3 clockwise).

Advantages:

1. After each drilling process the core will be ejected reliably.
2. Fits all POWER-MAX hole saw diameters from 14 mm (page 564).
3. Since the ejector drill does not drill through the material (as usual with hole saw with center drills), a continuous drilling operation is possible.

The inevitable "crashing" of the hole saw on the work piece after the break through of the center drill will be avoided (the main reason for tooth fracture at the hole saw).

ZUBEHÖR
ACCESSORIES

572

Machen Sie aus Ihrer Lochsäge ein Universal-Werkzeug für nahezu alle Maschinentypen. Wählen Sie aus dem Zubehör (siehe Seite 572-573) Ihren gewünschten Schaft.

Make from the hole saw a universal tool for almost all types of machines. Choose from the accessories (see page 572-573) your suitable shank.

EIGENSCHAFTEN · PROPERTIES

Handmaschinen · Handheld machines

| | | |
|---------------------------------|--------|-----------------------------------|
| Maximal empfohlener Ø | 100 mm | Maximum recommended Ø |
| Maximal empfohlene Schnitttiefe | 15 mm | Maximum recommended cutting depth |
| Maximal mögliche Schnitttiefe | 30 mm | Maximum possible cutting depth |

Stationäre und Kernbohrmaschinen Stationary and core drilling machines

| | | |
|---------------------------------|--------|-----------------------------------|
| Maximal empfohlener Ø | 120 mm | Maximum recommended Ø |
| Maximal empfohlene Schnitttiefe | 20 mm | Maximum recommended cutting depth |
| Maximal mögliche Schnitttiefe | 30 mm | Maximum possible cutting depth |

Extra schwere Ausführung

- Bei allen Lochsägen sind Schaft und Bohrer austauschbar
- Schnelle Bohrkernentfernung durch Auswurffeder bei Ø 17-120 mm
- Bohrkernentfernung ab Ø 14 mm möglich mit Power-Drill 4000 System s. Seite 568

Anwendungshinweis:

Bei Materialstärken über 6 mm ist mehrfaches Absetzen und Entfernen der Späne notwendig. Bei maximalen Schnitttiefen ist die Auswurffeder zu entfernen. Verwenden Sie bitte bei allen Metallen gutes Schneidöl (siehe ab Seite 1143).

Extra heavy construction

- All hole saws comes with exchangeable shank and drill
- Quick removal of drilled core through ejector spring for hole saws Ø 17-120 mm
- Quick removal of drilled core possible from Ø 14 mm see Power-Drill 4000 System see page 568

Application note:

For material thickness over 6 mm it is necessary to lift the drill and remove the chips several times. If drilling maximum cutting depth please remove the ejector spring. Use only good cutting oil for metals (see from page 1143).

POWER-DRILL 4000

Ersatz-Auswerferbohrer · Spare ejector drill

☑ \varnothing 14-120 mm 20 1530

• € 52,65

☑ 20 1531

• € 2,20

Funktionsweise:

- A. Das Werkstück ankörnen. Bei weichen Materialien wie Kunststoffen, Hölzern und Holzwerkstoffen kann ggf. auf das Ankörnen verzichtet werden.
- B. Setzen Sie den Auswerferbohrer 1 genau in die Mitte des Körnerpunktes an. Zu Beginn des Bohrprozesses wenig Druck (Vorschub) anwenden, bis die Lochsäge Minimum 0,5 mm Schnitttiefe erreicht hat. Die Lochsäge hat sich nun selbst zentriert. Der Vorschub kann erhöht werden.
- C. Eine Auswurfeder 2 im Schaft erzeugt Druck auf den Auswerferbohrer 1.
- D. Der Auswerferbohrer 1 wirft den Kern 4 nach dem Durchbohren aus. (Sollte der Kern nicht ausgeworfen werden, erhöhen Sie bitte den Federdruck am Auswerferbohrer durch drehen der Inbusschraube 3 im Uhrzeigersinn).

Vorteile:

1. Nach dem Bohren wird der Kern zuverlässig ausgeworfen.
2. Passt auf alle POWER-MAX Lochsägen ab Durchmesser 14 mm (Seite 564).
3. Da der Auswerferbohrer nicht das Material durchbohrt (wie sonst üblich bei Lochsägen mit Zentrierbohrern) entsteht ein kontinuierlicher Bohrvorgang.

Das unvermeidliche „Aufschlagen“ der Lochsäge nach dem Durchbrechen des Zentrierbohrers auf das Werkstück entfällt (Hauptgrund für Zahnbruch an der Lochsäge).

Operating mode:

- A. Center punch the work piece. Soft materials such as plastics, wood and wood based materials can possibly be done without the center punch.
- B. Place the ejector drill 1 in the middle of the center mark. Use little pressure (feed rate) until the hole saw reaches a minimum cutting depth of 0,5 mm. The hole saw in self-centered now. Feed rate can be increased.
- C. An ejector spring 2 which is installed in the arbor puts pressure on the ejector drill 1.
- D. The ejector drill 1 ejects the core 4 after drilling process. (If the core will not be ejected, please increase the spring pressure on the ejector drill by turning the Allen screw 3 clockwise).

Advantages:

1. After each drilling process the core will be ejected reliably.
2. Fits all POWER-MAX hole saw diameters from 14 mm (page 564).
3. Since the ejector drill does not drill through the material (as usual with hole saw with center drills), a continuous drilling operation is possible.

The inevitable “crashing” of the hole saw on the work piece after the break through of the center drill will be avoided (the main reason for tooth fracture at the hole saw).

| Steel | Stainless | Grey cast iron | Alu | Copper, brass, tin | Plastics GRP/CRP | Sandwich materials |
| < 1400 N | > 900 N | | > 10% Si | | | |

Ideal auch zum Bohren in Rohre

Also ideal for drilling into pipes

BEST SELLER

Zentrierbohrer TIALN beschichtet mit Kreuzschliff zum Anbohren ohne Verlauf (Ankörnen ist überflüssig)

Center drill TIALN coated comes with cross grinding for centering without running off (center punching not necessary)

20 1130A

POWER-MAX
SUPER HEAVY-DUTY 30

Hartmetall-bestückte Lochsäge, Nutzlänge 30 mm.
Nur Lochsägekörper
Carbide tipped hole saw, drill depth 30 mm | 1".
Hole saw body only

ZUBEHÖR
ACCESSORIES

576

Machen Sie aus Ihrer Lochsäge ein Universal-Werkzeug für nahezu alle Maschinentypen. Wählen Sie aus dem Zubehör (siehe Seite 576-577) Ihren gewünschten Schaft.

Make from the hole saw a universal tool for almost all types of machines. Choose from the accessories (see page 576-577) your suitable shank.

EIGENSCHAFTEN · PROPERTIES

Handmaschinen · Handheld machines

| | | |
|---------------------------------|--------------|-----------------------------------|
| Maximal empfohlener Ø | 40 mm | Maximum recommended Ø |
| Maximal empfohlene Schnitttiefe | 25 mm | Maximum recommended cutting depth |
| Maximal mögliche Schnitttiefe | 30 mm | Maximum possible cutting depth |

Stationäre und Kernbohrmaschinen Stationary and core drilling machines

| | | |
|---------------------------------|---------------|-----------------------------------|
| Maximal empfohlener Ø | 150 mm | Maximum recommended Ø |
| Maximal empfohlene Schnitttiefe | 30 mm | Maximum recommended cutting depth |
| Maximal mögliche Schnitttiefe | 30 mm | Maximum possible cutting depth |

Super schwere Ausführung

- Bei allen Lochsägen sind Schaft und Bohrer austauschbar
- Schnelle Bohrkernentfernung durch Auswurffeder bei Ø 19-150 mm
- Bohrkernentfernung ab Ø 14 mm möglich mit Power-Drill 4000 System s. Seite 572

Anwendungshinweis:

Bei Materialstärken über **15 mm** ist je nach Spanverlauf ggf. mehrfaches Absetzen und Entfernen der Späne notwendig. Bei maximalen Schnitttiefen ist die Auswurffeder zu entfernen. Verwenden Sie bitte bei allen Metallen gutes Schneidöl (siehe ab Seite 1143).

Super heavy construction

- All hole saws comes with exchangeable shank and drill
- Quick removal of drilled core through ejector spring for hole saws Ø 19-150 mm
- Quick removal of drilled core possible from Ø 14 mm see Power-Drill 4000 System see page 572

Application note:

For material thickness over **15 mm** it may be necessary (depending on the chip flow) to lift the drill and remove the chips several times. If drilling maximum cutting depth please remove the ejector spring. Use only good cutting oil for metals (see from page 1143).

POWER-MAX SUPER HEAVY-DUTY 30 20 1130

Hartmetall-bestückte Lochsäge, Nutzlänge 30 mm.
Komplett mit Schaft, Zentrierbohrer und Auswurffeder
Carbide tipped hole saw, drill depth 30 mm | 1".
Completely with shank, center drill and ejector spring

Ideal auch zum Bohren in Rohre

Also ideal for drilling into pipes

POWER-DRILL
4000

Ersatz-Auswerferbohrer · Spare ejector drill

Ø 14-120 mm 20 1530
€ 52,65

20 1531
€ 2,20

Funktionsweise:

- Das Werkstück ankörnen. Bei weichen Materialien wie Kunststoffen, Holzern und Holzwerkstoffen kann ggf. auf das Ankörnen verzichtet werden.
- Setzen Sie den Auswerferbohrer 1 genau in die Mitte des Körnerpunktes an. Zu Beginn des Bohrprozesses wenig Druck (Vorschub) anwenden, bis die Lochsäge Minimum 0,5 mm Schnitttiefe erreicht hat. Die Lochsäge hat sich nun selbst zentriert. Der Vorschub kann erhöht werden.
- Eine Auswurfeder 2 im Schaft erzeugt Druck auf den Auswerferbohrer 1.
- Der Auswerferbohrer 1 wirft den Kern 4 nach dem Durchbohren aus. (Sollte der Kern nicht ausgeworfen werden, erhöhen Sie bitte den Federdruck am Auswerferbohrer durch drehen der Inbusschraube 3 im Uhrzeigersinn).

Vorteile:

- Nach dem Bohren wird der Kern zuverlässig ausgeworfen.
- Passt auf alle POWER-MAX Lochsägen ab Durchmesser 14 mm (Seite 564).
- Da der Auswerferbohrer nicht das Material durchbohrt (wie sonst üblich bei Lochsägen mit Zentrierbohrern) entsteht ein kontinuierlicher Bohrvorgang.

Das unvermeidliche „Aufschlagen“ der Lochsäge nach dem Durchbrechen des Zentrierbohrers auf das Werkstück entfällt (Hauptgrund für Zahnbruch an der Lochsäge).

Operating mode:

- Center punch the work piece. Soft materials such as plastics, wood and wood based materials can possibly be done without the center punch.
- Place the ejector drill 1 in the middle of the center mark. Use little pressure (feed rate) until the hole saw reaches a minimum cutting depth of 0,5 mm. The hole saw in self-centered now. Feed rate can be increased.
- An ejector spring 2 which is installed in the arbor puts pressure on the ejector drill 1.
- The ejector drill 1 ejects the core 4 after drilling process. (If the core will not be ejected, please increase the spring pressure on the ejector drill by turning the Allen screw 3 clockwise).

Advantages:

- After each drilling process the core will be ejected reliably.
- Fits all POWER-MAX hole saw diameters from 14 mm (page 564).
- Since the ejector drill does not drill through the material (as usual with hole saw with center drills), a continuous drilling operation is possible.

The inevitable “crashing” of the hole saw on the work piece after the break through of the center drill will be avoided (the main reason for tooth fracture at the hole saw).

| Maximal empfohlener Ø | 40 mm | Maximum recommended Ø |
| Maximal empfohlene Schnitttiefe | 50 mm | Maximum recommended cutting depth |
| Maximal mögliche Schnitttiefe | 55 mm | Maximum possible cutting depth |

Super schwere Ausführung

- Bei allen Lochsägen sind Schaft und Bohrer austauschbar
- Schnelle Bohrkernentfernung durch Auswurffeder bei Ø 19-150 mm
- Bohrkernentfernung ab Ø 14 mm möglich mit Power-Drill 4000 System s. Seite 576

Anwendungshinweis:

Bei Materialstärken über **15 mm** ist je nach Spanverlauf ggf. mehrfaches Absetzen und Entfernen der Späne notwendig. Bei maximalen Schnitttiefen ist die Auswurffeder zu entfernen. Verwenden Sie bitte bei allen Metallen gutes Schneidöl (siehe ab Seite 1143).

Machen Sie aus Ihrer Lochsäge ein Universal-Werkzeug für nahezu alle Maschinentypen. Wählen Sie aus dem Zubehör (siehe Seite 580-581) Ihren gewünschten Schaft.

Make from the hole saw a universal tool for almost all types of machines. Choose from the accessories (see page 580-581) your suitable shank.

Stationäre und Kernbohrmaschinen Stationary and core drilling machines

| | | |
|---------------------------------|---------------|-----------------------------------|
| Maximal empfohlener Ø | 150 mm | Maximum recommended Ø |
| Maximal empfohlene Schnitttiefe | 55 mm | Maximum recommended cutting depth |
| Maximal mögliche Schnitttiefe | 55 mm | Maximum possible cutting depth |

Super heavy construction

- All hole saws comes with exchangeable shank and drill
- Quick removal of drilled core through ejector spring for hole saws Ø 19-150 mm
- Quick removal of drilled core possible from Ø 14 mm see Power-Drill 4000 System see page 576

Application note:

For material thickness over **15 mm** it may be necessary (depending on the chip flow) to lift the drill and remove the chips several times. If drilling maximum cutting depth please remove the ejector spring. Use only good cutting oil for metals (see from page 1143).

Ersatz-Auswerferbohrer · Spare ejector drill

Funktionsweise:

- Das Werkstück ankörnen. Bei weichen Materialien wie Kunststoffen, Holzern und Holzwerkstoffen kann ggf. auf das Ankörnen verzichtet werden.
- Setzen Sie den Auswerferbohrer 1 genau in die Mitte des Körnerpunktes an. Zu Beginn des Bohrprozesses wenig Druck (Vorschub) anwenden, bis die Lochsäge Minimum 0,5 mm Schnitttiefe erreicht hat. Die Lochsäge hat sich nun selbst zentriert. Der Vorschub kann erhöht werden.
- Eine Auswurfeder 2 im Schaft erzeugt Druck auf den Auswerferbohrer 1.
- Der Auswerferbohrer 1 wirft den Kern 4 nach dem Durchbohren aus. (Sollte der Kern nicht ausgeworfen werden, erhöhen Sie bitte den Federdruck am Auswerferbohrer durch drehen der Inbusschraube 3 im Uhrzeigersinn).

Vorteile:

- Nach dem Bohren wird der Kern zuverlässig ausgeworfen.
- Passt auf alle POWER-MAX Lochsägen ab Durchmesser 14 mm (Seite 564).
- Da der Auswerferbohrer nicht das Material durchbohrt (wie sonst üblich bei Lochsägen mit Zentrierbohrern) entsteht ein kontinuierlicher Bohrvorgang.

Das unvermeidliche „Aufschlagen“ der Lochsäge nach dem Durchbrechen des Zentrierbohrers auf das Werkstück entfällt (Hauptgrund für Zahnbruch an der Lochsäge).

Operating mode:

- Center punch the work piece. Soft materials such as plastics, wood and wood based materials can possibly be done without the center punch.
- Place the ejector drill 1 in the middle of the center mark. Use little pressure (feed rate) until the hole saw reaches a minimum cutting depth of 0,5 mm. The hole saw in self-centered now. Feed rate can be increased.
- An ejector spring 2 which is installed in the arbor puts pressure on the ejector drill 1.
- The ejector drill 1 ejects the core 4 after drilling process. (If the core will not be ejected, please increase the spring pressure on the ejector drill by turning the Allen screw 3 clockwise).

Advantages:

- After each drilling process the core will be ejected reliably.
- Fits all POWER-MAX hole saw diameters from 14 mm (page 564).
- Since the ejector drill does not drill through the material (as usual with hole saw with center drills), a continuous drilling operation is possible.

The inevitable "crashing" of the hole saw on the work piece after the break through of the center drill will be avoided (the main reason for tooth fracture at the hole saw).

| Maximal mögliche Schnitttiefe | 60 mm | Maximum possible cutting depth |

Vielzahn-Ausführung

(ECO-Wenigzahn-Ausführung siehe Art. 20 1150 Seite 596)
→ Schnelle Bohrkernentfernung durch Auswurffeder bei allen Durchmessern. Durch höhere Anzahl von Zähnen gegenüber den gängigen Konkurrenzmodellen saubere Schnittkanten und höchste Standzeiten.

Die ideale „ALLROUND“ Lochsäge für:

- Elektriker
 - Bauhandwerk
 - Zimmereien
 - Sanitär- und Heizungsbauer
 - Möbeltischlereien
 - Treppen- und Küchenstudios usw...
- Zum Bohren fast aller Materialien (siehe Anwendung)

Anwendungshinweis:

Bei Vollmaterial, Ne-Metalle über 15 mm ist je nach Spanverlauf ggf. mehrfaches Absetzen und Entfernen der Späne notwendig. Bei maximalen Schnitttiefen ist die Auswurffeder zu entfernen. Verwenden Sie bei allen Metallen gutes Schneidöl (siehe ab Seite 1143).

High number of teeth model

(Eco-less tooth model see article 20 1150 page 596)
→ Quick removal of drilled core through ejector spring for all hole saws. Higher number of teeth compared with common competing models guarantees clean cutting edges as well as a longer durability.

The ideal "ALLROUND" hole saw for:

- Electrician
- Carpenters and cabinet makers
- Furniture makers
- Plumbing and heating engineers
- Construction site applications
- Stairway and kitchen studios and similar...

Application note:

For full material, non-ferrous metal over 15 mm it may be necessary (depending on the chip flow) to lift the drill and remove the chips several times. If drilling maximum cutting depth please remove the ejector spring. Use only good cutting oil. For metal (see from page 1143).

POWER-MAX ALLROUND 60 20 1121

Hartmetall-bestückte Lochsäge, Nutzlänge 60 mm.
Komplett mit Schaft, Zentrierbohrer und Auswurffeder
Carbide tipped hole saw, drill depth 60 mm | 2".
Completely with shank, center drill and ejector spring

Ideal auch zum Bohren in Rohre

€ 10,70

SDS PLUS Ohne Hammer-Funktion anwenden Do not use hammer-function.

20 1115
€ 8,70

20 1127
€ 4,55

Hartmetall-bestückter Zentrierbohrer zum Bohren in Gasbeton- und Ytongsteinen, Tonziegel und Hohlblocksteinen.

Carbide tipped center drill for drilling in Ytong stones (auto-claved concrete blocks) clay bricks and hollow gauged brick/stones.

POWER-DRILL 4000

Ø 14-120 mm 20 1532
€ 64,50

Ersatz-Auswerferbohrer · Spare ejector drill

20 1533
€ 2,50

Funktionsweise:

- A. Das Werkstück ankörnen. Bei weichen Materialien wie Kunststoffen, Hölzern und Holzwerkstoffen kann ggf. auf das Ankörnen verzichtet werden.
- B. Setzen Sie den Auswerferbohrer 1 genau in die Mitte des Körnerpunktes an. Zu Beginn des Bohrprozesses wenig Druck (Vorschub) anwenden, bis die Lochsäge Minimum 0,5 mm Schnitttiefe erreicht hat. Die Lochsäge hat sich nun selbst zentriert. Der Vorschub kann erhöht werden.
- C. Eine Auswurfeder 2 im Schaft erzeugt Druck auf den Auswerferbohrer 1.
- D. Der Auswerferbohrer 1 wirft den Kern 4 nach dem Durchbohren aus. (Sollte der Kern nicht ausgeworfen werden, erhöhen Sie bitte den Federdruck am Auswerferbohrer durch drehen der Inbusschraube 3 im Uhrzeigersinn).

Vorteile:

1. Nach dem Bohren wird der Kern zuverlässig ausgeworfen.
2. Passt auf alle POWER-MAX Lochsägen ab Durchmesser 14 mm (Seite 564).
3. Da der Auswerferbohrer nicht das Material durchbohrt (wie sonst üblich bei Lochsägen mit Zentrierbohrern) entsteht ein kontinuierlicher Bohrvorgang.

Das unvermeidliche „Aufschlagen“ der Lochsäge nach dem Durchbrechen des Zentrierbohrers auf das Werkstück entfällt (Hauptgrund für Zahnbruch an der Lochsäge).

Operating mode:

- A. Center punch the work piece. Soft materials such as plastics, wood and wood based materials can possibly be done without the center punch.
- B. Place the ejector drill 1 in the middle of the center mark. Use little pressure (feed rate) until the hole saw reaches a minimum cutting depth of 0,5 mm. The hole saw in self-centered now. Feed rate can be increased.
- C. An ejector spring 2 which is installed in the arbor puts pressure on the ejector drill 1.
- D. The ejector drill 1 ejects the core 4 after drilling process. (If the core will not be ejected, please increase the spring pressure on the ejector drill by turning the Allen screw 3 clockwise).

Advantages:

1. After each drilling process the core will be ejected reliably.
2. Fits all POWER-MAX hole saw diameters from 14 mm (page 564).
3. Since the ejector drill does not drill through the material (as usual with hole saw with center drills), a continuous drilling operation is possible.

The inevitable "crashing" of the hole saw on the work piece after the break through of the center drill will be avoided (the main reason for tooth fracture at the hole saw).

EIGENSCHAFTEN · PROPERTIES

Handmaschinen · Handheld machines

| | | |
|---------------------------------|--------|-----------------------------------|
| Maximal empfohlener Ø | 180 mm | Maximum recommended Ø |
| Maximal empfohlene Schnitttiefe | 6 mm | Maximum recommended cutting depth |
| Maximal mögliche Schnitttiefe | 12 mm | Maximum possible cutting depth |

Stationäre und Kernbohrmaschinen Stationary and core drilling machines

| | | |
|---------------------------------|--------|-----------------------------------|
| Maximal empfohlener Ø | 200 mm | Maximum recommended Ø |
| Maximal empfohlene Schnitttiefe | 8 mm | Maximum recommended cutting depth |
| Maximal mögliche Schnitttiefe | 12 mm | Maximum possible cutting depth |

Leichtlauf Ausführung speziell für Handmaschinen

(selbstverständlich auch für stationäre Maschinen verwendbar)

Durch dünne Schnittbreite von nur 1,8-2,0 mm:

- wenig Schnittdruck
- schnelles und leichtgängiges Bohren
- exzellente Führung und Kontrolle während des Bohrvorgangs
- Schnelle Bohrkernentfernung durch Auswurfeder bei allen Durchmessern.

(Bei maximalen Schnitttiefen ist die Auswurfeder zu entfernen)

Anwendungshinweis:

Bei größeren Materialstärken pro Arbeitsgang 2-3 mm bohren, danach jeweils Späne entfernen. Verwenden Sie bitte bei allen Metallen gutes Schneidöl [siehe ab Seite 1143]

Smooth running version specifically for portable machines

(of course, also be used for stationary machines)

Because thin cutting width of only 1.8-2.0 mm:

- Low cutting pressure
- fast, smooth-running drilling
- excellent guidance and control during drilling
- Quick removal of drilled core through ejector spring for all hole saws. (If drilling maximum cutting depths please remove the ejector spring)

Application note:

At thicker materials: Cut 2-3 mm per cutting process, remove chips afterwards. Use only good cutting oil for metal [see from page 1143]

Hartmetall-bestückte Lochsäge, Nutzlänge 12 mm. Komplett mit Schaft, Zentrierbohrer und Auswurffeder
 Carbide tipped hole saw, drill depth 12 mm | 15/32". Completely with shank, center drill and ejector spring

EXTRA EASY-CUT 3

Hartmetall-bestückte Lochsäge, Nutzlänge 8 mm.
Komplett mit Schaft, Zentrierbohrer und Auswurffeder
Carbide tipped hole saw, drill depth 8 mm | 5/16".
Completely with shank, center drill and ejector spring

ANWENDUNG · APPLICATION

| | | | | | | |
|----------------|------------------------|----------------------------|------------|---|---|--|

| Stahl Steel | Edelstahl Stainless | Grauguss Grey cast iron | Alu Alu | Kupfer, Messing, Zinn Copper, brass, tin | Kunststoffe GFK/CFK Plastics GRP/CRP | Sandwich- Material Sandwich materials |
| < 1400 N | > 900 N | | > 10% Si | | | |

Verjüngter Zentrierbohrer zum Anbohren ohne Verlauf. Ankörnen ist überflüssig.

Tapered center drill for centering without running off. Center punching not necessary.

EIGENSCHAFTEN · PROPERTIES

Handmaschinen · Handheld machines

| | | |
|---------------------------------|-------|-----------------------------------|
| Maximal empfohlener Ø | 38 mm | Maximum recommended Ø |
| Maximal empfohlene Schnitttiefe | 5 mm | Maximum recommended cutting depth |
| Maximal mögliche Schnitttiefe | 8 mm | Maximum possible cutting depth |

Extra Leichtlauf Ausführung speziell für Akku-Bohrmaschinen
(selbstverständlich auch für elektrisch betriebene Maschinen)

Durch dünne Schnittbreite von 1,8 mm und 3 Zahn Technologie:
→ sehr wenig Schnittdruck für lange Akku Lebensdauer
→ schnelles und leichtgängiges Bohren aller Durchmesser auch bei begrenzter Akkuleistung
→ exzellente Führung und Kontrolle während des Bohrvorgangs
→ Schnelle Bohrkernentfernung durch Auswurffeder bei allen Durchmessern.
(Bei maximalen Schnitttiefen ist die Auswurffeder zu entfernen)

Anwendungshinweis:
Bei größeren Materialstärken pro Arbeitsgang 2-3 mm bohren, danach jeweils Späne entfernen. Verwenden Sie bitte bei allen Metallen gutes Schneidöl (siehe ab Seite 1143)

MINI-CUT

HSS-M2 + TIN beschichtete Lochsäge und Schweisspunktfräser, Nutzlänge 8 + 13 mm
HSS-M2 + TIN coated hole saws and spot weld cutter, drill depth 8 + 13 mm | 5/16" + 33/64"

ANWENDUNG · APPLICATION

| | | | | | | |
|----------|-----------|----------------|----------|-----------------------|---------------------|--------------------|
| | | | | | | |
| Stahl | Edelstahl | Grauguss | Alu | Kupfer, Messing, Zinn | Kunststoffe GFK/CFK | Sandwich-Material |
| Steel | Stainless | Grey cast iron | Alu | Copper, brass, tin | Plastics GRP/CRP | Sandwich materials |
| < 1100 N | > 900 N | | > 10% Si | | | |

Ø 6-20 mm = 8 mm
Ø 15/64"-25/32" = 5/16"
Ø 21-25 mm = 13 mm
Ø 53/64"-63/64" = 33/64"

TIN-GOLD Beschichtung für eine wesentliche Erhöhung der Standzeit auch bei Trockenbearbeitung (ohne/wenig Kühlung).

TiN-GOLD coating for considerably longer service life also when machining dry (no/little) cooling.

EIGENSCHAFTEN · PROPERTIES

HSS-M2 MINI-CUT Lochsäge für handgeführte Maschinen, Akku-Bohrmaschinen.

Das ideale Bohrwerkzeug für:

- Elektriker
- Sanitär- und Heizungsbauer
- Blechbearbeitung
- Wartungsinstallationen
- Automobile Blechbearbeitung (Schweißpunkte aufbohren)
- Und vieles mehr

Durch dünne Schnittbreite von nur 2,3 mm

- Sehr wenig Schnittdruck für lange Lebensdauer bei Arbeiten mit Akku-Bohrmaschinen.
- Keine Verformung dünner Bleche

Produziert extrem schnelle, saubere und nahezu gratfreie Bohrungen.

Bohrt in dünnste Bleche sowie Platten mit bis zu 13 mm Stärke.

Bohrt in Flachmaterial und Rohre aus:

- Edelstahl
- Stahl
- Guss
- Bunt- und Leichtmetalle
- Kunststoffe

HSS-M2 MINI-CUT hole saw for portable machines, cordless drills.

The ideal drilling tool for:

- Electrical installations
- Piping
- Conduit work
- Sheet metal fabrication
- Maintenance installation
- HVAC & PHCC
- Automotive aftermarket (removing spot welds)
- And many other industries

Because of thin cutting width of only 2,3 mm:

- Very little cutting pressure for long battery life if using cordless drilling machines.
- No deforming of thin sheet metals

Drills clean, almost burr-free holes in seconds.

Drills in extremely thin sheet metals as well as in blocks up to 13 mm thickness.

Drills in flat material as well as in tubes made of:

- Stainless steel
- Steel
- Cast iron
- Non ferrous metals
- Plastics

FUNKTIONSWEISE · OPERATING MODE

- Das Werkstück ankören. Es ist wichtig mit dem Körner einen starken Körnerpunkt zu setzen (speziell bei Handmaschinen).
 - Setzen Sie den Auswerferstift 1 genau in die Mitte des starken Körnerpunktes an. Zu Beginn des Bohrprozesses wenig Druck (Vorschub) verwenden, bis die Lochsäge ca. 0,5 mm Schnitttiefe erreicht hat. Der Bohrer hat sich nun selbst zentriert. Der Vorschub kann erhöht werden.
 - Eine Auswurffeder 2 im Schaft erzeugt Druck auf dem Auswerferstift 1.
 - Zum Einstellen der Schnitttiefe und Federdruck auf dem Auswerferstift drehen Sie die Inbusschraube mit dem Inbusschlüssel 3 im Uhrzeigersinn. (Einstellen der Schnitttiefe zum Anbohren von punktgeschweißten Blechen ist nur mit Halter Art. 21 0002 möglich).
 - Der Auswerferstift 1 wirft den Kern 4 nach dem Durchbohren aus.
- Center punch the work piece. It is important to set a strong center mark (especially if using handheld machines).
 - Place the ejector pin 1 exactly in the middle of the strong center mark. Use little pressure (feed-rate) until you reach approximately 0,5 mm cutting depth. The drill is self-centered now. Feed rate can be increased.
 - An ejector spring 2 which is installed in the arbor puts pressure on the ejector pin 1.
 - To adjust the cutting depth and spring force turn the Allen screw with the Allen key 3 clockwise (adjusting the cutting depth for drilling of spot welded sheets is only possible with arbor Art. 21 0002).
 - The ejector pin ejects the core 4 after drilling process.

ZUSAMMENBAU · ASSEMBLY

Halter Art. 21 0002 und Art. 21 0003 werden komplett mit allen Unterleg- und Distanzscheiben sowie passendem Inbusschlüssel geliefert
Arbor Art. 21 0002 and Art. 21 0003 are supplied with all washers, spacers and suitable allen key

21 0002
€ 13,20

Halter Arbor $\varnothing 6-20 \text{ mm}$

1 Flache Unterlegscheibe Flat washer
2 Konkave Distanzscheibe Concave spacer
3 Lochsäge Hole saw

Dieser Halter ist geeignet zum Lösen von punktgeschweißten Blechteilen. Die Frästiefe sowie Federdruck ist einstellbar.
This arbor is suitable for removing spot welds from sheet metal. Adjustable milling depth and spring force with setting screw.

Ersatzteile siehe Seite 531 · Spare parts see page 531

21 0003
€ 26,60

Halter Arbor $\varnothing 21-25 \text{ mm}$

1 Flache Unterlegscheibe Flat washer
2 Lochsäge Hole saw

ZUBEHÖR · ACCESSORIES

EIGENSCHAFTEN · PROPERTIES

BI-METALL Lochsägen sind die idealen Allround-Lochsägen für den Elektriker, Sanitär- und Heizungsbauer sowie Schlosser. Bohrt preiswert und schnell in Eisenbleche, NE-Metalle, Kunststoffe, Gipskarton und Hölzer. Halter mit Zentrierbohrer und Feder: Bei max. Schnitttiefe ist die Auswurfeder zu entfernen.

BI-METAL hole saws are the ideal all-round hole saws for electricians, plumbers, heating engineers and locksmiths. Drilling quickly and inexpensively in iron plates, non-ferrous metals, plastics, plasterboards and wood. Holder with center drill and spring: If drilling maximum cutting depth, please remove the ejector spring.

Für Durchmesser 35-305 mm mit neuem **Bohrkern-Schnellauswurfhalter**.

- Kein mühseliges entfernen des oftmals in der Lochsäge verbleibenden Bohrkerns.
- Zuverlässiger Auswurf aller Bohrkern **garantiert**.
- Selbst verklemmte/verkeilte Bohrkern werden zuverlässig ausgeworfen.
- Siehe Zubehör Halter Art. 20 1169 Seite 593

For diameter 35-305 mm with new **arbor for core quick-ejection**.

- No time-consuming removal of the core, which often remains in the hole saw.
- Reliable ejection of all cores **guaranteed**.
- Even jammed cores will be reliably ejected.
- See arbor art: 20 1169 page 593

ECO-Wenigzahn-Ausführung

(Vielzahn-Ausführung siehe Art. 20 1121 Seite 582-583)
Für Durchmesser 38-127 mm mit neuem **Bohrkern-Schnell-auswurfhalter**.
→ Kein mühseliges entfernen des oftmals in der Lochsäge verbleibenden Bohrkerns.
→ Zuverlässiger Auswurf aller Bohrkern **garantiert**.
→ Selbst verklemmte/verkeilte Bohrkern werden zuverlässig ausgeworfen.
→ Siehe Zubehör Halter Art. 20 1166 Seite 597

Für besonders schwere Arbeiten empfehlen wir ab 35 mm unseren HEAVY-DUTY Halter Art.: 20 1159
Bohrkern-Auswurf erfolgt über Feder am Zentrierbohrer.

Die ideale preiswerte „ALLROUND“ Lochsäge für:

- Elektriker
- Bauhandwerk
- Zimmereien
- Sanitär- und Heizungsbauer
- Möbeltischlereien
- Treppen- und Küchenstudios usw...

Anwendungshinweis:

Bei Vollmaterial, Ne-Metalle über 15 mm ist je nach Spanverlauf ggf. mehrfaches Absetzen und Entfernen der Späne notwendig. Bei maximalen Schnitttiefen ist die Auswurfeder zu entfernen. Verwenden Sie bei allen Metallen gutes Schneidöl (siehe ab Seite 1143).

Eco-low teeth model

(High teeth model see article 20 1121 page 582-583)
Für diameter 38-127 mm with new **arbor for core quick-ejection**.
→ No time-consuming removal of the core, which often remains in the hole saw.
→ Reliable ejection of all cores **guaranteed**.
→ Even jammed cores will be reliable ejected.
→ See arbor art: 20 1166 page 597

For heavy works we recommend up to 35 mm our HEAVY-DUTY arbor art: 20 1159
Core will be carried by a spring on the center drill.

The ideal "ALLROUND" hole saw for:

- Electrician
- Carpenters and cabinet makers
- Furniture makers
- Plumber and heating engineers
- Construction site applications
- Stairway and kitchen studios and similar...

For drilling almost all materials in coarse cut (see application)

Application note:

For solid non-ferrous metal over 15 mm it may be necessary (depending on the chip flow) to lift the drill and remove the chips several times. If drilling maximum cutting depth please remove the ejector spring. Use only good cutting oil. For metal (see from page 1143).

Achtung: Die Zollabmessungen entsprechen nicht exakt den mm Durchmessern · Attention: The inch sizes do not correspond exactly to the mm diameters

21 1500

DIAMOND GRIT

ZUBEHÖR · ACCESSORIES

EIGENSCHAFTEN · PROPERTIES

Schwere Ausführung mit solider Grundplatte

(Für ein Mehr an Stabilität sowie größerer Rundlauf- und Seitenschlagsgenauigkeit)

Die ideale Lochsäge für Bohrungen in schwierigsten, harten sowie abrasiven Materialien wie:

- Glasfaserverstärkte / Kohlefaserverstärkte Kunststoffe (GFK /CFK)
- Härteste keramische Fliesen
- Alle Sorten von Stein
- Porzellan
- Alle Sorten von Mauerwerk
- Glas

Heavy construction with solid base plate

(Gives a higher stability as well as concentric running exactness)

The ultimate hole saw for hard-to-cut materials such as:

- Glass fiber reinforced plastics / carbon fiber reinforced plastics (GRP / CRP)
- Hardest-ceramic tiles
- All kinds of stones
- Porcelain
- All types of masonry
- Glass

Anwendungshinweis:

Aufnahmen Art. 21 0026 Ø 14-30 mm sowie Art. 21 0030 Ø 14-30 mm werden mit dem langen Zentrierbohrer 6,35 × 80 mm Art. 21 0032 geliefert.

Dieser 80 mm lange Zentrierbohrer überragt die Lochsagen mit den Durchmessern:

- Ø 14-16 mm ca. 5 mm
- Ø 20-30 mm ca. 14 mm

(siehe Bild 1)

Application note:

Arbor Art. 21 0026 Ø 14-30 mm and arbor Art. 21 0030 Ø 14-30 mm comes with the long center drill (6,35 × 80 mm) Art. 21 0032.

This 80 mm long center drill rises above the hole saws with diameters:

- Ø 14-16 mm approx. 5 mm
- Ø 20-30 mm approx. 14 mm

(see picture 1)

Bei harten Materialien wie Fliesen, Porzellan, Stein usw. empfehlen wir daher bei Lochsagen Ø 20-30 mm den **kürzeren** Zentrierbohrer zu verwenden. Artikel 21 0046, Länge 70 mm.

Unbedingt empfehlenswert bei Fußbodenfliesen um ggf. die Fußboden-Heizungsschleifen mit dem längeren Zentrierbohrer nicht zu beschädigen. Aufnahmen Ø 32-152 mm kommen bereits mit dem kürzeren Zentrierbohrer (Art. 21 0046)

(siehe Bild 2)

For hard materials such as ceramic, porcelain, tiles, stone etc. do we therefore recommend from hole saw Ø 20-30 mm the **shorter** center drill article 21 0046, length 70 mm.

Highly recommended for drilling in floor tiles with underneath floor heating loops. The longer center drill could damage the heating loops. Arbor Ø 32-152mm comes already with the shorter center drill (Art. 21 0046)

(see picture 2)

Die Zentrierbohrer müssen nur zu Beginn des Bohrvorgangs verwendet werden. Nachdem die Lochsäge ca. 1 mm in das Material vorgedrungen ist, kann der Zentrierbohrer entfernt werden. Um übermäßige Hitzeentwicklung zu vermeiden, sollte mit Wasser gekühlt werden.

The center drill must be used only at the start of the drilling operation. After the hole saw has cut about 1 mm into the material, the center drill can be removed. Use water as a coolant to prevent heat build up on the cutting surface.

STUFENBOHRER & BLECHSCHÄLBOHRER

STEP DRILLS & TUBE AND SHEET DRILLS

Eines der umfangreichsten Lagerprogramme an Stufenbohrern & Blechschälbohrern.

- Erhältlich in den Durchmessern von 4-60 mm
- In 2 und 3 Schneiden
- Spiral genutet oder gerade genutet
- CBN-geschliffen
- BLUE-DUR oder TiN-GOLD-beschichtet

One of the most comprehensive stock range of step drills & tube and sheet drills.

- Available in diameters ranging from 4-60 mm
- In 2 and 3-cutting
- Spiral fluted or straight fluted
- CBN ground
- BLUE-DUR or TiN-GOLD-coated

EIGENSCHAFTEN · PROPERTIES

- 1** 3-Flächenschaft ergibt:
 - Hervorragende Drehmomentübertragung
 - Kein Durchrutschen im Bohrfutter
 - Somit deutlich höhere Schnittleistung
- 2** Alle Stufenbohrer & Blechschälbohrer erhältlich in der patentierten BLUE-DUR-Beschichtung oder in TiN-GOLD-Beschichtung. Beschichtungen erhöhen signifikant die Standzeiten. Unbedingt empfehlenswert bei schwierigen Materialien wie Edelstähle und bei Bohrungen ohne Kühlschmierstoffe.
- 3** Alle Stufenbohrer & Blechschälbohrer kommen mit eingelasierten Durchmessern in der Spirale.
- 4** Alle Stufenbohrer & Blechschälbohrer sind aus hochlegierten HSS-XE Stahl gefertigt für eine Härte bis zu 68 HRC. Dies ergibt höchste Verschleissfestigkeit und Standzeit.
- 5** Stufenbohrer & Blechschälbohrer sind auch Spiral-genutet lieferbar.
 - Ruhiges Schneidverhalten
 - Kein Verhaken im Material
 - Geringere Zerspanungskräfte
 - Weniger Gratbildung
 - Höhere Standzeiten

Selbstverständlich sind alle Stufenbohrer/Blechschälbohrer aus dem vollen Material CBN geschliffen.

- 1** 3-Flat shank for:
 - Excellent torque transmission
 - No slippage in the drill chuck
 - This results to superior cutting output
- 2** All step drills & sheets drills are available in the patented BLUE-DUR or TiN-GOLD-coating. Coatings significantly increase the service life. Strongly recommended for difficult materials such as stainless steels and if drilling without coolants.
- 3** All step drills & sheet drills comes lasered with diameters in the spiral.
- 4** All step drills & sheet drills are made of high-alloy steel HSS-XE for a hardness up to 68 HRC. This results in high wear resistance and service life.
- 5** Step drills & sheet drills are also available spiral-fluted for:
 - Smooth cutting behavior
 - No sticking in the material
 - Low cutting forces
 - less burrs on the work piece
 - longer service life

Of course, all step drills & sheet drills are CBN ground from solid material.

EIGENSCHAFTEN · PROPERTIES

HSS-XE Stahl + BLUE-DUR beschichtet

Gefertigt aus hochlegierten Spezialstahl "XE" für wesentlich höhere Standzeit gegenüber HSS-Stähle. BLUE-DUR Beschichtung für eine nochmalige wesentliche Erhöhung der Standzeit auch bei Trockenbearbeitung (ohne/wenig Kühlung).

Die tiefgeschliffene spiralförmige Spannut bietet hohe Laufruhe und Schnittleistung. Die Späne werden wie bei einem Spiralbohrer sauber abtransportiert. Ideal für dickere Bleche ab 2 mm.

HSS-XE steel + BLUE-DUR coated

Made of high-alloyed special steel „XE“ for considerably longer service life than HSS-Steel. BLUE-DUR coating for a further substantial increase in service life also when machining dry (no/less cooling).

The CBN ground and spiral flutes guarantee smooth running and high cutting performance. The chip flow is optimized and removed easily as with a twist drill. Ideal for thicker sheets from 2 mm.

HSS-XE Stahl + TiN-GOLD-beschichtet

Gefertigt aus hochlegierten Spezialstahl "XE" für wesentlich höhere Standzeit gegenüber HSS-Stähle. TiN-GOLD-Beschichtung für eine nochmalige wesentliche Erhöhung der Standzeit auch bei Trockenbearbeitung (ohne/wenig Kühlung).

Die tiefgeschliffenen Spannuten mit 3 Schneiden bieten nochmals höhere Laufruhe bei fühlbar weicherem Schnitt und hoher Schnittleistung. Hervorragend bei dünnen Blechen.

HSS-XE steel + TiN-GOLD-coated

Made of high-alloyed special steel „XE“ for considerably longer service life than HSS-Steel. TiN-GOLD-coating for a further substantial increase in service life also when machining dry (no/less cooling).

The deep-ground flutes with 3 cutting edges guarantee extremely smooth running, noticeable softer cutting and high cutting performance. Excellent for thin sheet metal.

5

6

7

8

9

Index

Zum Bohren in Kabelabzweigkästen, Installationsdosen, Verteilergehäusen, Hausanschlusskästen, Klemmkästen, Schaltschränke, usw.

Wichtig: Das seit Jahrzehnten bekannte Pg-System (Pg 7 – Pg 48) wird auf das internationale metrische System umgestellt (M 12 – M 63).

Karnasch XE-Stahl Stufenbohrer mit Spirale und BLUE-DUR-Beschichtung decken das gesamte Spektrum der Gehäuseöffnungen nach der neuen Norm M 12 – M 40 ab. Die Stufenbohrer haben jeweils eine kurze (3 mm oder 4 mm) Bohrstufe für die Kabeldurchlässe in dünnwandige Gehäuse (Wandstärke max. 3 mm sowie 4 mm) sowie eine lange (6 mm) Bohrstufe für Gewindekernlöcher in Verteilerschränken (Wandstärke max. 5,5 mm).

For drilling in junction boxes, installation sockets, distributor body, service entrance boxes, terminal boxes, electrical cabinets, etc.

Important: The PG system (Pg 7 – Pg 48) known for decades is converted to the international metric system (M 12 – M 63).

Karnasch XE steel step drills with spiral and BLUE-DUR coating cover the entire spectrum of body openings according to the new M 12 – M 40 standard. The step drills have a short drill step (3 mm or 4 mm) for cable outlets in thin-walled bodies (wall thickness max. 3 mm as well as 4 mm) and a long drill step (6 mm) for tapping drill holes in distribution boxes (wall thickness max. 5.5 mm).

Schneide 1 ist mit metrischen Durchmessern gekennzeichnet. Schneide 2 ist mit Zoll Durchmessern gekennzeichnet.

Achtung: In Umstellung mit Inch Markierung. Falls unbedingt benötigt bitte vorab anfragen ob bereits lieferbar.

HSS-XE steel + TiN-GOLD-coated

Made of high-alloyed special steel „XE“ for considerably longer service life than HSS-Steel. TiN-GOLD-coating for a further substantial increase in service life also when machining dry (no/less cooling).

Flute 1 is marked with metric diameters. Flute 2 is marked with inch diameters.

Note: In conversion with Inch marking. If absolutely needed please ask in advance if already available.

EIGENSCHAFTEN · PROPERTIES

HSS-XE Stahl

Gefertigt aus hochlegierten Spezialstahl "XE" für wesentlich höhere Standzeiten gegenüber HSS-Stähle.

Schneide 1 ist mit metrischen Durchmessern gekennzeichnet. Schneide 2 ist mit Zoll Durchmessern gekennzeichnet.

Achtung: In Umstellung mit Inch Markierung. Falls unbedingt benötigt bitte vorab anfragen ob bereits lieferbar.

EIGENSCHAFTEN · PROPERTIES

HSS-XE Stahl + TiN-GOLD-beschichtet

Gefertigt aus hochlegierten Spezialstahl "XE" für wesentlich höhere Standzeit gegenüber HSS-Stähle. TiN-GOLD-Beschichtung für eine nochmalige wesentliche Erhöhung der Standzeit auch bei Trockenbearbeitung (ohne/wenig Kühlung).

Die tiefgeschliffene spiralförmige Spannutt bietet hohe Laufruhe und Schnittleistung. Die Späne werden wie bei einem Spiralbohrer sauber abtransportiert.

Schneide 1 ist mit metrischen Durchmessern gekennzeichnet. Schneide 2 ist mit Zoll Durchmessern gekennzeichnet.

Achtung: In Umstellung mit Inch Markierung. Falls unbedingt benötigt bitte vorab anfragen ob bereits lieferbar.

HSS-XE steel + TiN-GOLD-coated

Made of high-alloyed special steel „XE“ for considerably longer service life than HSS-Steel. TiN-GOLD-coating for a further substantial increase in service life also when machining dry (no/less cooling).

The CBN ground and spiral flutes guarantee smooth running and high cutting performance. The chip flow is optimized and removed easily as with a twist drill.

Flute 1 is marked with metric diameters. Flute 2 is marked with inch diameters.

Note: In conversion with Inch marking. If absolutely needed please ask in advance if already available.

Vollhartmetall Gewindebohrer-Ausbohrer

Solid carbide drills to remove jammed taps

Schnittwerte für Tisch- und Ständerbohrmaschinen

Schmierung: Trocken oder Nass.

Achtung: bei Bearbeitung mit Schmierung besteht Verklebungsgefahr

Drehzahl: 1000–1500 U/min

Bedienungsanleitung

1. Das Werkstück muss sehr stabil eingespannt werden
2. Den überstehenden Teil des Gewindebohrers mit dem Werkstück plan machen
3. Zentrieren des Gewindeausbruchbohrers durch mehrmaliges „An-tippen“. Beim Zentrieren auf einer CNC Maschine, einen geringen Vorschub wählen
4. Der Ausbohrvorgang kann auf einer NC-Maschine mit Schmierung (Achtung: verklebungsgefahr), sowie von Hand auf einer Tisch- oder Ständerbohrmaschine durchgeführt werden. Mehrmaliges entfernen der Späne ist bei allen Maschinen zwingend notwendig.
5. Verbleibende Späne nach dem Ausbohrvorgang mit Druckluft entfernen.
6. Mit einem neuen Gewindebohrer das Gewinde erneut schneiden.
7. Nach der Gewindefertigstellung mit einem Gewindelehrdorn die Maßhaltigkeit prüfen.

Mit einem Gewindeausbruchbohrer können ca. 1–5 Gewinde ausgebohrt werden.

Ein Nachschleifen von Gewindeausbruchbohrern ist nicht rentabel.

Durch den Sechskantschaft kann der Gewindeausbruchbohrer auch in normale Drei- oder Vierbackenfutter eingespannt werden.

Bei richtigem Einsatz wird bei allen Materialien, auch Cu und Al sowie gehärteten Materialien das Kernloch nicht beschädigt.

Cutting data for bench drilling and column drilling machine

Lubrication: Dry or wet (risk of stick together with lubrication)

Speed: 1000–1500 r/min

Operation instruction

1. The workpiece has to be clamped very solid and safe.
2. The overlapping part on the tap has to be made plane with the workpiece.
3. Centering of the drill by multiple tip-centering. In case of tip-centering with NC machine please choose a lower cutting speed.
4. The remove of tap can be made with an NC machine with lubrication (Attention: risk of stick together) also by hand with a bench drilling or column
5. Remove of remaining chippings with compressed air or with a scriber.
6. New thread cutting with a new tap.
7. After finishing the new thread please test the size accuracy.

1–5 taps can be remove with one drill to remove jammed taps. Regrinding of drills to remove jammed taps is not economical. Due to the hexagon this drill can also be clamped in normal three-or-four-jaw chucks.

In case of correct use the core hole will not be damaged in all materials, also in Cu or Al and hardened materials.

KEGELSENKER COUNTERSINKS

Bei Karnasch Hochleistungs-Kegelsenkern werden die Spannuten prinzipiell CBN-geschliffen. **Dies garantiert:** Hervorragende Spanabfuhr / ratterfreies Arbeiten / riefenfreie Oberfläche / beste Zentriereigenschaften.

The flutes of Karnasch high-performance countersinkers are always CBN ground. **This guarantees:** Excellent chip clearance / chatter-free working / scratch-free surface / best centering.

EIGENSCHAFTEN · PROPERTIES

Schafttoleranz h8
Shank tolerance h8

3-Flächenschaft ergibt:

- Hervorragende Drehmomentübertragung
- Kein Durchrutschen im Bohrfutter
- Somit deutlich höhere Schnittleistung

*** ACHTUNG:** In Umstellung. Noch nicht bei allen Artikeln lieferbar. Falls unbedingt benötigt, bitte vorab anfragen ob bereits lieferbar.

RAPID-CUT Kegelsenker Art. 20 1760 / 20 1765 Seite 652-653 bereits komplett mit 3-Flächenschaft.

Hartmetall-Kegelsenker Art. 20 1755 werden mit zylindrischen Schaft geliefert. Diese Senker werden hauptsächlich in der HIGH-TECH Zerspanung auf CNC-Maschinen mit Schrumpffutter eingesetzt. Hierfür eignet sich nur der zylindrische Schaft.

3-flat shank for:

- Excellent torque transmission
- No slippage in the drill chuck
- This results to superior cutting output

*** Note:** In conversion. Not yet available for all countersinks. If absolutely needed, please ask in advance if already available.

RAPID-CUT countersinks Art. 20 1760 / 20 1765 page 652-653 already completely with 3-flat shank.

Tungsten carbide countersinks Art. 20 1755 comes with cylindrical shank. This countersink type is used mostly on CNC-machines with shrinking chucks. Shrinking chucks works only with cylindrical shank.

Jeder Durchmesser erhält an seinem Umfang einen Freiwinkel.

Ergebnis:

Der größte Schneidendurchmesser ist somit ebenfalls immer der höchste Punkt.

Each diameter receives its own relief angle.

Result:

The cutting edge is also always the highest point.

Axialer CBN Hinterschliff.

Ergebnis:

Sauberer Schnitt bei geringer Wärmeentwicklung.

Axial relief produces by CBN grinding leads to a smooth and low-heat cut.

Entsprechend des Durchmessers radial angepasster CBN-Hinterschliff.

Ergebnis:

Die Schneide ist immer der höchste Punkt im Durchmesser.

According to the diameter radially-adjusted CBN ground relief.

Result:

The cutting edge is always the highest point of the diameter.

CBN-tiefgeschliffene Spannuten ergeben im Gegensatz zu gefrästen Spannuten wesentlich höhere Gratfreiheit und Schärfe. Daraus resultiert eine deutlich höhere Schnittleistung und Standzeit.

CBN deep-ground flutes leads (unlike milled grooves) to significantly smoother and sharper cutting edges. This result is: Higher cutting performance and tool life.

EIGENSCHAFTEN · PROPERTIES

HSS-XE Stahl

Gefertigt aus hochlegiertem Spezialstahl "XE" für wesentlich höhere Standzeiten gegenüber HSS-Stähle.

60° Kegelsenker sind besonders geeignet zum Ansenken von Gewindekernlöchern und für Ansenkungen im Werkzeug- und Vorrichtungsbau.

Zum Senken in folgende Materialien:

- Edelstähle (V2A)
- Stahl
- Guss
- Bunt- und Leichtmetalle

3-Flächenschaft ergibt:

- Hervorragende Drehmomentübertragung
- Kein Durchrutschen im Bohrfutter
- Somit deutlich höhere Schnittleistung

HSS-XE steel

Made of high-alloyed special steel „XE“ for considerably longer service life than HSS-steel.

60° countersinks are particularly suitable for countersinking in threaded core holes and countersinking in the tool making / jig making industry.

For countersinking in materials:

- High-alloyed chromium steel such as stainless (V2A)
- Steel
- Cast iron
- Non ferrous metals

3-flat shank for:

- Excellent torque transmission
- No slippage in the drill chuck
- This results to superior cutting output

EIGENSCHAFTEN · PROPERTIES

HSS-XE Stahl + BLUE-TEC beschichtet

Gefertigt aus hochlegiertem Spezialstahl "XE" für wesentlich höhere Standzeiten gegenüber HSS-Stähle.
 BLUE-TEC Beschichtung für eine nochmalige wesentliche Erhöhung der Standzeit auch bei Trockenbearbeitung (lohne/wenig Kühlung)

60° Kegelsenker sind besonders geeignet zum Ansenken von Gewindekernlöchern und für Ansenkungen im Werkzeug- und Vorrichtungsbau.

Zum Senken in folgende Materialien:

- Edelstähle (V2A / V4A)
- Stahl
- Guss
- Bunt- und Leichtmetalle

3-Flächenschaft ergibt:

- Hervorragende Drehmomentübertragung
- Kein Durchrutschen im Bohrfutter
- Somit deutlich höhere Schnittleistung

HSS-XE steel + BLUE-TEC coated

Made of high-alloyed special steel „XE“ for considerably longer service life than HSS-steel.

BLUE-TEC coating for a further substantial increase in service life also when machining dry (no/less cooling)

60° countersinks are particularly suitable for countersinking in threaded core holes and countersinking in the tool making / jig making industry.

For countersinking in materials:

- High-alloyed chromium steel such as stainless (V2A / V4A)
- Acid resistant steel
- Steel
- Cast iron
- Non ferrous metals

3-flat shank for:

- Excellent torque transmission
- No slippage in the drill chuck
- This results to superior cutting output

Der Kegelsenker wird geliefert mit:

- 4 Stück Hartmetall-Einsätze beschichtet inkl. 4 TORX Befestigungsschrauben sowie 1 TORX Befestigungsschlüssel komplett montiert.
- Die dreieckigen Einsätze sind drehbar. Somit sind alle 3 Schneidflächen einsetzbar für 3-fache Standzeit.
- **Passende Führungsstifte siehe unten.**

The countersinks comes inclusive:

- 4 pieces carbide inserts coated incl. 4 TORX mounting screws and 1 TORX wrench. Fully assembled.
- The triangular inserts are rotatable. This means that all 3 cutting surfaces can be used for 3 times more lifetime.
- **Suitable pilots pins see below.**

EIGENSCHAFTEN · PROPERTIES

Hartmetall-bestückt für höchste Standzeiten auch bei schwierigsten Materialien.

Ideal zum Senken in:

- Abrasive und harte Stähle über 1000 N/mm²
- Grauguss (GG) über 240 HB
- Rost- und säurebeständige Stähle
- Titan- und Titanlegierungen
- Alle weiteren Stähle, Guss und Leichtmetalle wo höchste Standzeiten erwünscht sind.

Tungsten Carbide tipped for maximum tool life, even in most difficult materials.

For countersinking in:

- Abrasive and hard steel with a strength of over 1000 N/mm²
- Grey cast iron over 240 HB
- High-alloyed chromium steel such as stainless (V2A / V4A)
- Acid resistant steel
- Titanium and titanium alloys
- All further steel sorts, cast iron, non ferrous metals where maximum tool life are desired.

Die Führungsstifte ergeben hervorragende Stabilität und Genauigkeit. Sollte ohne Führungsbohrer gearbeitet werden, bitte den Kegelsenker 100% mittig zur Bohrung ausrichten.

The pilots gives great stability and accuracy. If drilling without pilots, please take care, that the countersink is adjusted absolutely centrally to the drilled hole.

EIGENSCHAFTEN · PROPERTIES

HSS-XE Stahl

Gefertigt aus hochlegiertem Spezialstahl "XE" für wesentlich höhere Standzeiten gegenüber HSS-Stähle.

Zum Senken in folgende Materialien:

- Edelstähle (V2A)
- Stahl
- Guss
- Bunt- und Leichtmetalle

3-Flächenschaft ergibt:

- Hervorragende Drehmomentübertragung
- Kein Durchrutschen im Bohrfutter
- Somit deutlich höhere Schnittleistung

HSS-XE steel

Made of high-alloyed special steel „XE“ for considerably longer service life than HSS-steel.

For countersinking in materials:

- High-alloyed chromium steel such as stainless (V2A)
- Steel
- Cast iron
- Non ferrous metals

3-flat shank for:

- Excellent torque transmission
- No slippage in the drill chuck
- This results to superior cutting output

EIGENSCHAFTEN · PROPERTIES

HSS-XE Stahl + BLUE-TEC beschichtet

Gefertigt aus hochlegiertem Spezialstahl "XE" für wesentlich höhere Standzeiten gegenüber HSS-Stähle.
 BLUE-TEC Beschichtung für eine nochmalige wesentliche Erhöhung der Standzeit auch bei Trockenbearbeitung (ohne/wenig Kühlung)

Zum Senken in folgende Materialien:

- Edelstähle (V2A / V4A)
- Stahl
- Guss
- Bunt- und Leichtmetalle

3-Flächenschaft ergibt:

- Hervorragende Drehmomentübertragung
- Kein Durchrutschen im Bohrfutter
- Somit deutlich höhere Schnittleistung

HSS-XE steel + BLUE-TEC coated

Made of high-alloyed special steel „XE“ for considerably longer service life than HSS-steel.
 BLUE-TEC coating for a further substantial increase in service life also when machining dry (no/less cooling)

For countersinking in materials:

- High-alloyed chromium steel such as stainless (V2A / V4A)
- Acid resistant steel
- Steel
- Cast iron
- Non ferrous metals

3-flat shank for:

- Excellent torque transmission
- No slippage in the drill chuck
- This results to superior cutting output

EIGENSCHAFTEN · PROPERTIES

ASP-Pulverstahl + BLUE-TEC beschichtet

Gefertigt aus pulvermetallurgischen Schnellarbeitsstahl. Für wesentlich höhere Standzeiten gegenüber HSS-XE Stahl.
BLUE-TEC Beschichtung für eine nochmalige wesentliche Erhöhung der Standzeit auch bei Trockenbearbeitung (ohne/wenig Kühlung)

Zum Senken in folgende Materialien:

- Edelstähle (V2A / V4A)
- Rost- und säurebeständige Stähle
- Titan und Titanlegierungen
- Alle weiteren Stähle, Guss und Leichtmetalle
... wenn hohe Standzeiten erforderlich sind.

3-Flächenschaft ergibt:

- Hervorragende Drehmomentübertragung
- Kein Durchrutschen im Bohrfutter
- Somit deutlich höhere Schnittleistung

ASP-Powder steel + BLUE-TEC coated

Made of powder metallurgy high speed steel. For considerably longer service life than HSS-XE steel.
BLUE-TEC coating for a further substantial increase in service life also when machining dry (no/less cooling)

For countersinking in materials:

- High-alloyed chromium steel such as stainless (V2A / V4A)
- Acid resistant steel
- Titanium and titanium alloys
- All further steel sorts, cast iron,
... non ferrous metals where high tool life are desired.

3-flat shank for:

- Excellent torque transmission
- No slippage in the drill chuck
- This results to superior cutting output

Vollhartmetall + BLUE-TEC beschichtet

Gefertigt aus Vollhartmetall für höchste Standzeiten auch bei schwierigsten Materialien.
BLUE-TEC Beschichtung für eine nochmalige wesentliche Erhöhung der Standzeit auch bei Trockenbearbeitung (ohne/wenig Kühlung)
Ø 4,3-11,5 mm komplett aus Vollhartmetall
Ø 12,4-31 mm Schaft gelötet

Zum Senken in folgende Materialien:

- Abrasive und harte Stähle über 1000 N/mm²
- Grauguss (GG) über 240 HB
- Rost- und säurebeständige Stähle
- Titan und Titanlegierungen
- Alle weiteren Stähle, Guss und Leichtmetalle ... wenn höchste Standzeiten erforderlich sind.

Vollhartmetall-Kegelsenker Art. 20 1755 werden mit zylindrischem Schaft geliefert. Diese Senker werden hauptsächlich in der HIGH-TECH Zerspantung auf CNC-Maschinen mit Schrumpffutter eingesetzt. Hierfür eignet sich nur der zylindrische Schaft.

Achtung:

Vollhartmetallkegelsenker sollten nur auf CNC Maschinen verwendet werden.

Solid carbide + BLUE-TEC coated

Made of solid carbide for maximum tool life, even in most difficult materials. BLUE-TEC coating for a further substantial increase in service life also when machining dry (no/less cooling)
Ø 4,3-11,5 mm solid carbide
Ø 12,4-31 mm brazed shank

For countersinking in materials:

- Abrasive and hard steel with a strength of over 1000 N/mm²
- Grey cast iron over 240 HB
- High-alloyed chromium steel such as stainless (V2A / V4A)
- Acid resistant steel
- Titanium and titanium alloys
- All further steel sorts, cast iron, non ferrous metals ... where maximum tool life are desired.

Solid carbide countersinks Art. 20 1755 comes with cylindrical shank. This countersink type is used mostly on CNC-machines with shrinking chucks. Shrinking chucks works only with cylindrical shank.

Attention:

Solid carbide countersinks should be only used on CNC machines.

EIGENSCHAFTEN · PROPERTIES

Vollhartmetall + BLUE-TEC beschichtet, 4 + 5 Schneiden, für schwerste zerspanbare Materialien

BLUE-TEC Beschichtung für eine nochmalige wesentliche Erhöhung der Standzeit auch bei Trockenbearbeitung (ohne/wenig Kühlung)
Ø 10,4 mm komplett aus Vollhartmetall
Ø 12,4-31,0 mm Schaft gelötet

Zum Senken in folgende Materialien:

- Gehärtete Stähle bis 1400 N/mm²
- Stähle bis zu 60 HRC
- Rost- und Säurebeständige Stähle über 900 N/mm²
- Alle Gussarten
- Graphit, Kohle- und Glasfaserverbundstoffe
- Exotische Materialien über 850 N/mm² wie Nimonic, Inconel, Hastelloy
- Hervorragend auch für Hardox 500 geeignet

Vollhartmetall-Kegelsenker Art. 40 3045 werden mit zylindrischem Schaft geliefert. Diese Senker werden hauptsächlich in der HIGH-TECH Zerspanung auf CNC-Maschinen mit Schrumpffutter eingesetzt. Hierfür eignet sich nur der zylindrische Schaft.

Achtung:

Vollhartmetall-Kegelsenker sollten nur auf CNC Maschinen verwendet werden.

Solid carbide + BLUE-TEC coated, 4 + 5 cuts for difficult machine materials

BLUE-TEC coating for a further substantial increase in service life also when machining dry (no/less cooling)
Ø 10,4 mm solid carbide
Ø 12,4-31,0 mm brazed shank

For countersinking in materials:

- Hardened steel up to 1400 N/mm²
- Steel up to 60 HRC
- Acid resistant steel
- All cast iron types
- Graphite, carbon- and glass fibre reinforced plastics
- Exotic materials over 850 N/mm² such as nimonic, Inconel, hastelloy
- Excellent also for hardox 500

Solid carbide countersinks Art. 40 3045 comes with cylindrical shank.

This countersink type is used mostly on CNC-machines with shrinking chucks. Shrinking chucks works only with cylindrical shank.

Attention:

Solid carbide countersinks should be only used on CNC machines.

EIGENSCHAFTEN · PROPERTIES

HSS-XE Stahl

Gefertigt aus hochlegiertem Spezialstahl "XE" für wesentlich höhere Standzeiten gegenüber HSS-Stähle.

RAPID-CUT speziell entwickelt für automatischen und schnellen Vorschub. Optimierte Zerspanungsgeometrie + 3 Flächen-schliff des Schaftes führen zu:

- bis zu 30% schnelleres Senken
- bis zu 40% höhere Standzeiten

Ideal zum Senken in:

- Edelstähle V2A
- Stahl
- Guss
- Bunt- und Leichtmetalle

3-Flächenschaft ergibt:

- Hervorragende Drehmomentübertragung
- Kein Durchrutschen im Bohrfutter
- Somit deutlich höhere Schnittleistung

HSS-XE steel

Made of high-alloyed special steel „XE“ for considerably longer service life than HSS-steel.

RAPID-CUT specially developed for automatic and quick feed. Optimized cutting geometry + 3 flat sections of the shank leads to:

- up to 30% faster sinking than conventional countersinks
- up to 40% higher service life

Excellent for countersinking in:

- Stainless steel V2A
- Steel
- Cast iron
- Non ferrous metals

3-flat shank for:

- Excellent torque transmission
- No slippage in the drill chuck
- This results to superior cutting output

EIGENSCHAFTEN · PROPERTIES

HSS-XE Stahl

Gefertigt aus hochlegiertem Spezialstahl „XE“ für wesentlich höhere Standzeiten gegenüber HSS-Stähle.

Zum Senken in folgende Materialien:

- Edelstähle (V2A)
- Stahl
- Guss
- Bunt- und Leichtmetalle

3-Flächenschaft ergibt:

- Hervorragende Drehmomentübertragung
- Kein Durchrutschen im Bohrfutter
- Somit deutlich höhere Schnittleistung

HSS-XE steel

Made of high-alloyed special steel „XE“ for considerably longer service life than HSS-steel.

For countersinking in materials:

- High-alloyed chromium steel such as stainless (V2A)
- Steel
- Cast iron
- Non ferrous metals

3-flat shank for:

- Excellent torque transmission
- No slippage in the drill chuck
- This results to superior cutting output

EIGENSCHAFTEN · PROPERTIES

HSS-XE Stahl + BLUE-TEC beschichtet

Gefertigt aus hochlegiertem Spezialstahl „XE“ für wesentlich höhere Standzeiten gegenüber HSS-Stähle.
 BLUE-TEC Beschichtung für eine nochmalige wesentliche Erhöhung der Standzeit auch bei Trockenbearbeitung (ohne/wenig Kühlung)

Zum Senken in folgende Materialien:

- Edelstähle (V2A / V4A)
- Stahl
- Guss
- Bunt- und Leichtmetalle

3-Flächenschaft ergibt:

- Hervorragende Drehmomentübertragung
- Kein Durchrutschen im Bohrfutter
- Somit deutlich höhere Schnittleistung

HSS-XE steel + BLUE-TEC coated

Made of high-alloyed special steel „XE“ for considerably longer service life than HSS-steel.
 BLUE-TEC coating for a further substantial increase in service life also when machining dry (no/less cooling)

For countersinking in materials:

- High-alloyed chromium steel such as stainless (V2A / V4A)
- Acid resistant steel
- Steel
- Cast iron
- Non ferrous metals

3-flat shank for:

- Excellent torque transmission
- No slippage in the drill chuck
- This results to superior cutting output

Der Kegelsenker wird geliefert mit:

- 4 Stück Hartmetall-Einsätze beschichtet inkl. 4 TORX Befestigungsschrauben sowie 1 TORX Befestigungsschlüssel komplett montiert.
- Die dreieckigen Einsätze sind drehbar. Somit sind alle 3 Schneidflächen einsetzbar für 3-fache Standzeit.
- **Passende Führungsstifte siehe unten.**

The countersinks comes inclusive:

- 4 pieces carbide inserts coated incl. 4 TORX mounting screws and 1 TORX wrench. Fully assembled.
- The triangular inserts are rotatable. This means that all 3 cutting surfaces can be used for 3 times more lifetime.
- **Suitable pilots pins see below.**

Passende Morsekonusaufnahmen
siehe Seite 521-523
Suitable morse taper see page 521-523

EIGENSCHAFTEN · PROPERTIES

Hartmetall-bestückt für höchste Standzeiten auch bei schwierigsten Materialien.

Ideal zum Senken in:

- Abrasive und harte Stähle über 1000 N/mm²
- Grauguss (GG) über 240 HB
- Rost- und säurebeständige Stähle
- Titan- und Titanlegierungen
- Alle weiteren Stähle, Guss und Leichtmetalle wo höchste Standzeiten erwünscht sind.

Tungsten carbide tipped for maximum tool life, even in most difficult materials.

For countersinking in:

- Abrasive and hard steel with a strength of over 1000 N/mm²
- Grey cast iron over 240 HB
- High-alloyed chromium steel such as stainless (V2A / V4A)
- Acid resistant steel
- Titanium and titanium alloys
- All further steel sorts, cast iron, non ferrous metals where maximum tool life are desired.

Die Führungsstifte ergeben hervorragende Stabilität und Genauigkeit. Sollte ohne Führungsbohrer gearbeitet werden, bitte den Kegelsenker 100% mittig zur Bohrung ausrichten.

The pilots gives great stability and accuracy. If drilling without pilots, please take care, that the countersink is adjusted absolutely centrally to the drilled hole.

HSS-XE Stahl

Gefertigt aus hochlegiertem Spezialstahl "XE" für wesentlich höhere Standzeiten gegenüber HSS-Stähle.

Zum Senken in folgende Materialien:

- Edelstähle (V2A)
- Stahl
- Guss
- Bunt- und Leichtmetalle

3-Flächenschaft ergibt:

- Hervorragende Drehmomentübertragung
- Kein Durchrutschen im Bohrfutter
- Somit deutlich höhere Schnittleistung

HSS-XE steel

Made of high-alloyed special steel „XE“ for considerably longer service life than HSS-steel.

For countersinking in materials:

- High-alloyed chromium steel such as stainless (V2A)
- Steel
- Cast iron
- Non ferrous metals

3-flat shank for:

- Excellent torque transmission
- No slippage in the drill chuck
- This results to superior cutting output

EIGENSCHAFTEN · PROPERTIES

HSS-XE Stahl + BLUE-TEC beschichtet

Gefertigt aus hochlegiertem Spezialstahl "XE" für wesentlich höhere Standzeiten gegenüber HSS-Stähle.
 BLUE-TEC Beschichtung für eine nochmalige wesentliche Erhöhung der Standzeit auch bei Trockenbearbeitung (ohne/wenig Kühlung)

Zum Senken in folgende Materialien:

- Edelstähle (V2A / V4A)
- Stahl
- Guss
- Bunt- und Leichtmetalle

3-Flächenschaft ergibt:

- Hervorragende Drehmomentübertragung
- Kein Durchrutschen im Bohrfutter
- Somit deutlich höhere Schnittleistung

HSS-XE steel + BLUE-TEC coated

Made of high-alloyed special steel „XE“ for considerably longer service life than HSS-steel.
 BLUE-TEC coating for a further substantial increase in service life also when machining dry (no/less cooling)

For countersinking in materials:

- High-alloyed chromium steel such as stainless (V2A / V4A)
- Acid resistant steel
- Steel
- Cast iron
- Non ferrous metals

3-flat shank for:

- Excellent torque transmission
- No slippage in the drill chuck
- This results to superior cutting output

EIGENSCHAFTEN · PROPERTIES

HSS-XE Stahl

Gefertigt aus hochlegiertem Spezialstahl "XE" für wesentlich höhere Standzeiten gegenüber HSS-Stähle.

Zum Senken in folgende Materialien:

- Edelstähle (V2A)
- Stahl
- Guss
- Bunt- und Leichtmetalle

Verwendung: Zum Versenken von Innensechskant-Schrauben DIN 912, 6912, 7984 und Zylinderschrauben ISO 1207 (DIN 84)

HSS-XE steel

Made of high-alloyed special steel „XE“ for considerably longer service life than HSS-steel.

For countersinking in materials:

- High-alloyed chromium steel such as stainless (V2A)
- Steel
- Cast iron
- Non ferrous metals

Application: For countersinking allen screws DIN 912, 6912, 7984 and cylindrical head screws ISO 1207 (DIN 84)

HSS-XE Stahl

Gefertigt aus hochlegiertem Spezialstahl "XE" für wesentlich höhere Standzeiten gegenüber HSS-Stähle.

Zum Senken in folgende Materialien:

- Edelstähle (V2A)
- Stahl
- Guss
- Bunt- und Leichtmetalle

Bohr- und Senkstufe sind jeweils mit eigenen Span-Nuten und Führungsfasen gefertigt. Dadurch mehrmaliges Nachschleifen möglich.

HSS-XE steel

Made of high-alloyed special steel „XE“ for considerably longer service life than HSS-steel.

For countersinking in materials:

- High-alloyed chromium steel such as stainless (V2A)
- Steel
- Cast iron
- Non ferrous metals

Drill and counterbore each with its own chip flutes and guide chamfers. This means it can be reground many times.

40 1010

Bohr- und Senkstufe sind jeweils mit eigenen Span-Nuten und Führungsfasen gefertigt. Dadurch mehrmaliges Nachschleifen möglich.
 Drill and counterbore each with its own chip flutes and guide chamfers. This means it can be reground many times.

EIGENSCHAFTEN · PROPERTIES

HSS-XE Stahl + TITAN-TEC beschichtet
 Gefertigt aus hochlegiertem Spezialstahl „XE“ für wesentlich höhere Standzeiten gegenüber HSS-Stähle.
 TITAN-TEC Beschichtung für eine nochmalige wesentliche Erhöhung der Standzeit auch bei Trockenbearbeitung (ohne/wenig Kühlung)

- Zum Senken in folgende Materialien:**
- Edelstähle (V2A / V4A)

Verwendung: Besonders geeignet für NC-Maschinen, da hohe Positionsgenauigkeit, beste Zentriereigenschaft und sehr stabil. Das vorherige Zentrieren kann deshalb oft entfallen. Sehr stabile und enge Rundlauf-toleranzen zwischen Bohr- und Senkdurchmesser garantieren exakte Fluchtung. Für Schrauben-Durchgangslöcher nach DIN-ISO 273 und Senkungen nach DIN 74, Blatt 1, Form A, Gütegrad fein. Für Schrauben nach ISO 2009, 2010, 7046, 7047 (DIN 963, 964, 965, 966).

Use: Particular suitable for NC machines due to high positional accuracy, excellent centering properties and great sturdiness. The preceding centering operation can thus often be omitted. Very sturdy and tight concentricity tolerances between drill Ø and counterbore Ø guarantee exact alignment. For through holes for screws to DIN-ISO 273 and countersinks to DIN 74, sheet 1 form A fine grade. For screws to ISO 2009, 2010, 7046, 7047 (DIN 963, 964, 965, 966)

40 1050

Verwendung: Bohrung und Senkung werden in einem Arbeitsgang genau fluchtend zueinander gefertigt. Daher sehr stabile und enge Rundlauf-toleranzen.

Besonders geeignet für NC-Maschinen, da hohe Positionsgenauigkeit, beste Zentriereigenschaft und sehr stabil. Das vorherige Zentrieren kann deshalb oft entfallen. Für Gewindekernlochbohrungen nach DIN 336 Blatt 1 mit Ansenkung 90°. Der nachfolgende Gewindebohrer schneidet dadurch nicht an der scharfen Bohrkante an.

Use: Hole and countersink are produced in one operation and precisely aligned. Therefore very sturdy and tight concentricity tolerances. Particular suitable for NC machines due to high positional accuracy, excellent centering properties and great sturdiness. The preceding centering operation can thus often be omitted. For thread tapping drill holes to DIN 336 sheet 1 with 90° countersink. In the following operation, the tap therefore does not have to cut into the sharp edge of the hole

40 1070

Verwendung: Bohrung und Senkung werden in einem Arbeitsgang genau fluchtend zueinander gefertigt. Daher sehr stabile und enge Rundlauf toleranzen.

Besonders geeignet für NC-Maschinen, da hohe Positionsgenauigkeit, beste Zentriereigenschaft und sehr stabil. Das vorherige Zentrieren kann deshalb oft entfallen. Für Gewindekernlochbohrungen nach DIN 336 Blatt 1 mit Ansenkung 90°. Der nachfolgende Gewindebohrer schneidet dadurch nicht an der scharfen Bohrkante an.

Use: Hole and countersink are produced in one operation and precisely aligned. Therefore very sturdy and tight concentricity tolerances. Particular suitable for NC machines due to high positional accuracy, excellent centering properties and great sturdiness. The preceding operation can thus often be omitted. For thread tapping drill holes to DIN 336 sheet 1 with 90° countersink. In the following operation, the tap therefore does not have to cut into the sharp edge of the hole

HSS-XE + TITAN-TEC Kurzstufenbohrer mit langer Bohrstufe für Durchgangsloch 90°
HSS-XE + TITAN-TEC stub subland drill with long drilling step for through holes

40 2070

Verwendung: Für Schrauben- und Durchgangslöcher nach DIN-ISO 273 und Senkungen nach DIN 74 Blatt 1 Form A, Ausführung mittel. Für Schrauben nach ISO 2009, 2010, 7046, 7047 (DIN 963, 964, 966). Besonders geeignet für Bohrungen mit gleichzeitiger Ansenkung in Profilmaterial.

Use: For through holes for screws DIN-ISO 273 and countersinks to DIN 74, sheet 1 form A, medium grade. For screws to ISO 2009, 2010, 7047 (DIN 963, 964, 966). Especially suitable for holes with simultaneous countersinking in profile material.

Durchgangsloch mit Senkung für Schraubenkopf in einem Arbeitsgang gebohrt.

Through hole with counterbore for screw head drilled in one operation.

HP-3 **BEST SELLER** VALUETOOL 690-703

Die am meisten verwendete Universalverzahnung

The most widely used universal cutting style

- Hohe Zerspanleistung durch Kreuzverzahnung:
 - Ruhiger Lauf
 - Kurze Späne
- Für alle Stahlsorten wie:
 - Gusseisen
 - Stahl < 60 HRC
 - Edelstahl (INOX)
 - Nickelbasis- und Titanlegierungen
- Auch Kupfer, Messing, Bronze
- High cutting action through cross cutting style
 - Smooth operation
 - Short chips
- For use on all ferrous metals such as:
 - Cast iron
 - Steel < 60 HRC
 - Stainless steel (INOX)
 - Nickel basis and titanium alloy
- Also copper, brass, bronze

HP-2 704-712

Die am meisten verwendete Einfachverzahnung

The most widely used single cutting style

- Hohe Zerspanleistung mit guter Oberflächengüte
- Für alle Stahlsorten wie:
 - Gusseisen
 - Stahl < 60 HRC
 - Edelstahl (INOX)
 - Nickelbasis- und Titanlegierungen
- Auch Kupfer, Messing, Bronze
- High cutting action with good surface finish
- For use on all ferrous metals such as:
 - Cast iron
 - Steel < 60 HRC
 - Stainless steel (INOX)
 - Nickel basis and titanium alloy
- Also copper, brass, bronze

HP-4 714-721

Feine Kreuzverzahnung

Fine cross cutting style

- Exzellente Kontrolle (auch an schwierig zugänglichen Stellen)
 - Ruhiger Lauf · Kurze Späne
 - Gute Oberflächengüte
- Mittlere Zerspanleistung
- Für alle Stahlsorten wie:
 - Bis zu extra harten Stählen ca. 70 HRC
 - Gusseisen · Edelstahl (INOX)
 - Hochwarmfeste Werkstoffe wie z.B. Nickel-Basis + Kobalt Basislegierungen
- Excellent control (also at difficult to reach positions)
 - Smooth operation · Short chips
 - Good surface finish
- Medium cutting action
- For all kinds of steel: Up to extra hard steel approx. 70 HRC · Cast iron · Stainless steel (INOX) · Heat-resistant substances, such as e.g. nickel based + cobalt based alloys

HP-6 746-752

Extrem grobe Kreuzverzahnung

Extremely rough cross cutting style

- Extrem hoher Materialabtrag (Schruppen)
- Für alle Stahlsorten wie:
 - Gusseisen
 - Stahl < 60 HRC
- Auch für Kupfer, Messing, Bronze
- Für den harten Schruppeinsatz wie z.B. auf Werften, Gießereien entwickelt.
- Extremely fast metal removal (roughing)
- For all ferrous metals, such as:
 - Cast iron
 - Steel < 60 HRC
- Also for copper, brass, bronze
- Developed for use in tough roughing conditions, such as, e.g., on shipyards, foundries.

HP-9 754-760

Speziell für Edelstahl. Extrem hohe Zerspanleistung

Epecially for stainless steel. Extremely high machining output.

- Extrem hohe Zerspanleistung und Standzeit für alle austenitischen, rost- und säurebeständigen Stähle.
- Nickelbasis und Titanlegierungen (Drehzahl reduzieren um Funkenbildung zu vermeiden)
- Hochwertige Oberflächengüte
- Keine Anlauffarben am Werkstück durch geringe Wärmeentwicklung
- Extremely high machining output and service life for all austenitic, rust- and acid-resilient steels.
- Nickel basis and titanium alloy (reduce speed to avoid sparking)
- High-quality surface.
- No annealing colours at the workpiece due to low heat development.

HP-8 762-768

Speziell für Stahl und Stahlguss. Extrem hohe Zerspanleistung

Epecially for steel and cast steel. Extremely high machining output

- Bis zu 60% höhere Zerspanleistung im Vergleich zu herkömmlichen Kreuzverzahnungen.
- Hohe Aggressivität erzeugt große Späne mit hervorragender Spanabfuhr.
- Keine Anlauffarben am Werkstück durch geringe Wärmeentwicklung
- Up to 60% higher machining output as compared to conventional cross cut.
- High aggressiveness produces large chips with outstanding chip removal.
- No annealing colours at the workpiece due to low heat development.

HP-7

722-729

Für grobe Zerspantung und höchsten Materialabtrag von:

For coarse cutting and highest material removal from:

- Alulegierungen
- Leichtmetalle
- Weiche Buntmetalle (NE-Metalle)
- Kunststoffe
- Faserverstärkte Kunststoffe GFK/CFK
- Aluminum alloy
- Light metals
- Soft copper and copper alloys (non-ferrous metals)
- Plastics
- Fibre-reinforced plastic (GFK/CFK)

HP-1

730-737

Für Superlegierungen. Extrem robuste Kreuzverzahnung

For super alloys. Extremely robust cross cutting style

- Schlagunempfindlichkeit (Zahnausbrüche, Abplatzungen, Kopfbrüche werden minimiert)
- Exzellente Kontrolle und Laufruhe
- Mittlere bis hohe Zerspantung
- Speziell für schwierigste Superlegierungen + Edelstähle wie: Titan, Inconel, Hastelloy, Waspaloy, Duplex, Amanox usw.
- Anwendungsbeispiel: Bearbeitung von Flugzeug Turbinenschaufeln, Gasturbinen
- Impact resistance (tooth breakages, chipping, head breakages are minimised)
- Excellent control and quiet running
- Medium to high cutting action
- Especially for the most difficult super alloys + stainless steel, such as: Titanium, Inconel, Hastelloy, Waspaloy, Duplex, Amanox, etc.
- Application example: Working aeroplane turbine blades, gas turbines

HP-5

738-744

Extrem feine Einfachverzahnung

Extremely fine single cutting style

- Exzellente Oberflächengüte
- Vorzugsweise für feines Entgraten von allen Stahlsorten wie:
 - Bis zu extra harten Stählen ca. 70 HRC
 - Gusseisen
 - Edelstahl (INOX)
 - Hochwärmefeste Werkstoffe wie z.B. Nickel-Basis + Kobalt-Basis + Kobalt-Basis Legierungen
- Exzellente surface finish
- Preferred for fine deburring all ferrous metals, such as:
 - Up to extra hard steel approx. 70 HRC
 - Cast iron
 - Stainless steel (INOX)
 - Heat resistant substances, such as, e.g. nickel based + cobalt based alloys

HP-7-Mini

729

Minifrässtifte in feiner Aluverzahnung

Mini-Burrs in fine Alu cutting style

- Einsatzgebiete:
 - Feinmechanik
 - Werkzeugbau
- Applications:
 - Precision engineering
 - Tool manufacture

HP-1-Mini Ø3 mm

737

Für Superlegierungen. Extrem robuste Kreuzverzahnung

For super alloys. Extremely robust cross cutting style

- Schlagunempfindlichkeit (Zahnausbrüche, Abplatzungen, Kopfbrüche werden minimiert)
- Exzellente Kontrolle und Laufruhe
- Mittlere bis hohe Zerspantung
- Speziell für schwierigste Superlegierungen + Edelstähle wie: Titan, Inconel, Hastelloy, Waspaloy, Duplex, Amanox usw.
- Anwendungsbeispiel: Bearbeitung von Flugzeug, Turbinenschaufeln, Gasturbinen
- Impact resistance (tooth breakages, chipping, head breakages are minimised)
- Excellent control and quiet running
- Medium to high cutting action
- Especially for the most difficult super alloys + stainless steel, such as: Titanium, Inconel, Hastelloy, Waspaloy, Duplex, Amanox, etc.
- Application example: Working aeroplane turbine loops, gas turbines

HP-11-Micro

770-774

Extrem feine Kreuzverzahnung

Extremely fine cross cutting style

- **Exzellent für die:** Feinbearbeitung · Extrem feine Putzarbeiten · Korrekturen im Werkzeug- und Formenbau · Schleifen/Schärfen von Schnittwerkzeugen
- **Eigenschaften:** Gutes Abtragverhalten · Vibrationsarm · Exzellente Kontrolle/Führung im Handeinsatz · Hohe Oberflächengüte
- **Vorteile:** Es können nahezu alle Werkstoffe bis zu einer Härte von 70 HRC bearbeitet werden. **In diesem Bereich werden üblicherweise Keramik-Schleifstifte verwendet.** Die neue Micro-Verzahnung garantiert:
 - Keine Geometrieänderung durch Abnutzung/Verschleiß gegenüber Schleifstifte.
 - Wesentlich höheren Materialabtrag sowie Standzeit gegenüber Schleifstifte

HP-6

746-752

Extrem grobe Kreuzverzahnung
Extremely rough cross cutting style

ANWENDUNG · APPLICATION

| | | | | | | | | | |
|--------------------|--|----------------------------|----------------------------|-----------------------|----------------------|----------------------|--|----------------|---|
| Stahl Steel | Gehärteter Stahl Hardened steel | Edelstahl Stainless | Gusseisen Cast iron | Titan Titanium | Cermet Cermet | Nickel Nickel | Kupfer, Kupferlegierungen Copper, copper alloys | Alu Alu | Kunststoffe GFK/CFK Plastics GRP/CRP |
| ✓ | | ✓ | ✓ | ✓ | | ✓ | ✓ | | |

- Extrem hoher Materialabtrag (Schruppen)
 - Für alle Stahlsorten wie:
 - Gusseisen
 - Stahl < 60 HRC
 - Auch für Kupfer, Messing, Bronze
 - Für den harten Schruppeinsatz wie z.B. auf Werften, Gießereien entwickelt.
- Extremely fast metal removal (roughing)
 - For all ferrous metals, such as:
 - Cast iron
 - Steel < 60 HRC
 - Also for copper, brass, bronze
 - Developed for use in tough roughing conditions, such as, e.g., on shipyards, foundries.

754-760

Speziell für Edelstahl. Extrem hohe Zerspanleistung
Especially for stainless steel. Extremely high machining output.

ANWENDUNG · APPLICATION

| | | | | | | | | | |
|--------------------|--|----------------------------|----------------------------|-----------------------|----------------------|----------------------|--|----------------|---|
| Stahl Steel | Gehärteter Stahl Hardened steel | Edelstahl Stainless | Gusseisen Cast iron | Titan Titanium | Cermet Cermet | Nickel Nickel | Kupfer, Kupferlegierungen Copper, copper alloys | Alu Alu | Kunststoffe GFK/CFK Plastics GRP/CRP |
| | | ✓ | | ✓ | | | | | |

- Extrem hohe Zerspanleistung und Standzeit für alle austenitischen, rost- und säurebeständigen Stähle.
 - Nickelbasis und Titanlegierungen (Drehzahl reduzieren um Funkenbildung zu vermeiden)
 - Hochwertige Oberflächengüte
 - Keine Anlauffarben am Werkstück durch geringe Wärmeentwicklung
- Extremely high machining output and service life for all austenitic, rust- and acid-resilient steels.
 - Nickel basis and titanium alloy (reduce speed to avoid sparking)
 - High-quality surface.
 - No annealing colours at the workpiece due to low heat development.

HP-8

762-768

Speziell für Stahl und Stahlguss. Extrem hohe Zerspanleistung
Especially for steel and cast steel. Extremely high machining output

ANWENDUNG · APPLICATION

| | | | | | | | | | |
|--------------------|--|----------------------------|----------------------------|-----------------------|----------------------|----------------------|--|----------------|---|
| Stahl Steel | Gehärteter Stahl Hardened steel | Edelstahl Stainless | Gusseisen Cast iron | Titan Titanium | Cermet Cermet | Nickel Nickel | Kupfer, Kupferlegierungen Copper, copper alloys | Alu Alu | Kunststoffe GFK/CFK Plastics GRP/CRP |
| ✓ | ✓ | | ✓ | | | | | | |

- Bis zu 60% höhere Zerspanleistung im Vergleich zu herkömmlichen Kreuzverzahnungen.
 - Hohe Aggressivität erzeugt große Späne mit hervorragender Spanabfuhr.
 - Keine Anlauffarben am Werkstück durch geringe Wärmeentwicklung
- Up to 60% higher machining output as compared to conventional cross cut.
 - High aggressiveness produces large chips with outstanding chip removal.
 - No annealing colours at the workpiece due to low heat development.

✓ OPTIMAL
 OPTIMAL
 ✓ GUT
 GOOD

Exzellente für die:

- Feinbearbeitung
- Extrem feine Putzarbeiten
- Korrekturen im Werkzeug- und Formenbau
- Schleifen/Schärfen von Schnittwerkzeugen

Eigenschaften:

- Gutes Abtragverhalten
- Vibrationsarm
- Exzellente Kontrolle/Führung im Handeinsatz
- Hohe Oberflächengüte

Vorteile:

Es können nahezu alle Werkstoffe bis zu einer Härte von 70 HRC bearbeitet werden.

In diesem Bereich werden üblicherweise Keramik-Schleifstifte verwendet.

- Die neue Micro-Verzahnung garantiert:
 - Keine Geometrieänderung durch Abnutzung/ Verschleiß gegenüber Schleifstifte.
 - Wesentlich höheren Materialabtrag sowie Standzeit gegenüber Schleifstifte

Excellent for:

- Finishing
- Extremely fine cleaning work
- Corrections in tool and mould construction
- Grinding/sharpening of cutting tools

Characteristics:

- Good stock removal
- Low vibrations
- Excellent control and guidance under handheld conditions.
- High surface quality

Advantages:

Micro-cut can be used for work on almost all materials up to a hardness of 70 HRC.

In this area usually mounted points are used.

- Unlike with mounted points, there is no change in geometry due to wear and tear.
- Unlike with mounted points, there is much higher performance, surface quality and lifetime

- Hohe Zerspanleistung durch Kreuzverzähnung:
 - Ruhiger Lauf
 - Kurze Späne
- Für alle Stahlsorten wie:
 - Gusseisen
 - Stahl < 60 HRC
 - Edelstahl (INOX)
 - Nickelbasis- und Titanlegierungen
- Auch Kupfer, Messing, Bronze

- High cutting action through cross cutting style
 - Smooth operation
 - Short chips
- For use on all ferrous metals such as:
 - Cast iron
 - Steel < 60 HRC
 - Stainless steel (INOX)
 - Nickel basis and titanium alloy
- Also copper, brass, bronze

Der revolutionäre Zylinder-Radius Frässtift siehe Seite 694/695
The revolutionary cylinder-radius burr see page 694/695

Das einzigartige **CYLINDER+RADIUS** Design verwandelt den herkömmlichen Zylinder Frässtift in ein Hightech Werkzeug.

Diese neue Entwicklung erfüllt die höchsten Herstellungsstandards für alle Arten der Anwendung in der Industrie, darunter speziell auch für die Luft- und Raumfahrtindustrie.

Das spezielle Radius-Design an der Spitze des Zylinders vermeidet Zahnbruch und erhöht wesentlich die Standzeit.

Durch Radiusdesign:

- kein Verkanten / Abrutschen in das Werkstück.
- Beschädigungen von teuren Werkzeugen werden vermieden.

Durch Kreuzverzahnung:

- exzellente Kontrolle und Führung beim Entgratvorgang.

Eigenschaften und Vorteile:

Der Radius an der Spitze des Fräasers ergibt:

- verbesserte Nutzenstabilität durch verrundete Kanten.
- Der Radius ermöglicht eine bessere Kontrolle während des Schleifvorgangs.
- Die Rundung verhindert das Verkanten / Abrutschen in das Werkstück.
- Erzeugung eines Radius' auf dem Werkstück
- Rundung reduziert Bruch an der Schnittkante des Fräasers.

The **CYLINDER+RADIUS** unique design transforms the conventional cylinder burr into a hightech tool.

The new development meets the highest manufacturing standards for all kind of industries, especially the aerospace industry.

The radius design at the top of the cylinder provides an extended tool life avoiding teeth breakage.

This unique design with its **double cut** will improve operator control, reduce the size of chips and prevent damage to expensive parts.

Features and benefits:

Radius at the top of the cylinder results:

- Offers improved flute strength at the start of the burr.
- The radius provides better control of the burr.
- Prevents digging into work piece at the intersecting point.
- Produces a cylinder radius on the work piece.
- Reduces flute chipping at the intersecting point.

✓ OPTIMAL
OPTIMAL
✓ GUT
GOOD

- Hohe Zerspanleistung mit guter Oberflächengüte
- Für alle Stahlsorten wie:
 - Gusseisen
 - Stahl < 60 HRC
 - Edelstahl (INOX)
 - Nickelbasis- und Titanlegierungen
- Auch Kupfer, Messing, Bronze

- High cutting action with good surface finish
- For use on all ferrous metals such as:
 - Cast iron
 - Steel < 60 HRC
 - Stainless steel (INOX)
 - Nickel basis and titanium alloy
- Also copper, brass, bronze

BLUE-TEC-beschichtet
BLUE-TEC-coated

Die für Frässtifte optimierte und patentierte BLUE-TEC-Beschichtung ergibt einzigartige Standzeiten und Performance in allen Stahlsorten.

Patented BLUE-TEC coating, specifically designed for burrs, gives outstanding tool life and excellent performance on all metals.

| Werkstoffgruppen | | | Bearbeitung | Schnittgeschwindigkeit (m/min) |
|------------------|---|---|--|--------------------------------|
| Stahl, Stahlguss | Ungehärtete, nicht vergütete Stähle bis 1200 N/mm ² (< 38 HRC) | Baustähle, Kohlenstoffstähle, Werkzeugstähle, unlegierte Stähle, Einsatzstähle, Stahlguss | Grobes Zerpanen mit hohem Materialabtrag | 450-600 |
| | Gehärtete, vergütete Stähle über 1200 N/mm ² (> 38 HRC) | Werkzeugstähle, Vergütungsstähle, legierte Stähle, Stahlguss | | 250-350 |
| Edelstahl (INOX) | Rost- und säurebeständige Stähle | Austenitische und ferritische Edelstähle | Grobes Zerpanen mit hohem Materialabtrag | 250-350 |
| NE-Metalle | Harte NE-Metalle | Bronze, Titan/Titanlegierungen, harte Alulegierungen (hoher Si-Anteil) | Grobes Zerpanen mit hohem Materialabtrag | 250-350 |
| | Hochwarmfeste Werkstoffe | Nickelbasis- und Kobaltbasislegierungen (Triebwerk- und Turbinenbau) | | 300-450 |
| Gusseisen | Graues Gusseisen, weißes Gusseisen | Gusseisen mit Lamellengraphit EN-GJL (GG), mit Kugelgraphit/Späroguss EN-GJS (GGG), weißer Temperguss EN-GJMW (GTW), schwarzer Temperguss EN-GJMB (GTS) | Grobes Zerpanen mit hohem Materialabtrag | 450-600 |

| Material groups | | | Application | Cutting speed m/min |
|------------------------|---|---|--|---------------------|
| Steel, cast steel | Non-hardened, non-heat treated steels up to 1200 N/mm ² (< 38 HRC) | Construction steels, carbon steels, tool steels, non-alloyed steels, case-hardened steels, cast steels | Coarse machining with high stock removal | 450-600 |
| | Hardened, heat-treated steels exceeding 1200 N/mm ² (> 38 HRC) | Tool steels, tempering steels, alloyed steel, cast steels | | 250-350 |
| Stainless steel (INOX) | Rust and acid-resistant steels | Austenitic and ferritic stainless steels | Coarse machining with high stock removal | 250-350 |
| Non-ferrous metals | Hard-non-ferrous metals | Bronze, titanium/titanium alloys, hard alu-alloys (high Si content) | Coarse machining with high stock removal | 250-350 |
| | High-temperature resistant materials | Nickel based alloys, cobalt based alloys (aircraft engine and turbine construction) | | 300-450 |
| Cast iron | Grey cast iron, white cast iron | Cast iron with flake graphite EN-GJL, with nodular graphite cast iron EN-GJS, white annealed cast iron EN-GJMW, black cast iron EN-GJMB | Coarse machining with high stock removal | 450-600 |

| Schnittgeschwindigkeit • Cutting speed (m/min) | | | | | | | |

✓ OPTIMAL
OPTIMAL

✓ GUT
GOOD

- Exzellente Kontrolle (Auch an schwierig zugänglichen Stellen)
 - Ruhiger Lauf
 - Kurze Späne
 - Gute Oberflächengüte
- Mittlere Zerspanleistung
- Für alle Stahlsorten wie:
 - Bis zu extra harten Stählen ca. 70 HRC
 - Gusseisen
 - Edelstahl (INOX)
 - Hochwärmefeste Werkstoffe wie z.B. Nickel-Basis + Kobalt Basislegierungen
- Excellent control (also at difficult to reach positions)
 - Smooth operation
 - Short chips
 - Good surface finish
- Medium cutting action
- For all kinds of steel:
 - Up to extra hard steel approx. 70 HRC
 - Cast iron
 - Stainless steel (INOX)
 - Heat-resistant substances, such as e.g. nickel based + cobalt based alloys

BLUETEC
BESCHICHTET
COATED

BLUE-TEC-beschichtet
BLUE-TEC-coated

Die für Frässtifte optimierte und patentierte BLUE-TEC-Beschichtung ergibt einzigartige Standzeiten und Performance in allen Stahlsorten.

Patented BLUE-TEC coating, specifically designed for burrs, gives outstanding tool life and excellent performance on all metals.

| Werkstoffgruppen | | | Bearbeitung | Schnittgeschwindigkeit (m/min) |
|------------------|---|---|---|--------------------------------|
| Stahl, Stahlguss | Ungehärtete, nicht vergütete Stähle bis 1200 N/mm ² (< 38 HRC) | Baustähle, Kohlenstoffstähle, Werkzeugstähle, unlegierte Stähle, Einsatzstähle, Stahlguss | Feines Zerspanen = mittlerer Materialabtrag | 650-750 |
| | Gehärtete, vergütete Stähle über 1200 N/mm ² (> 38 HRC) | Werkzeugstähle, Vergütungsstähle, legierte Stähle, Stahlguss | | 450-600 |
| Edelstahl (INOX) | Rost- und säurebeständige Stähle | Austenitische und ferritische Edelstähle | Feines Zerspanen = mittlerer Materialabtrag | 450-600 |
| NE-Metalle | Harte NE-Metalle | Bronze, Titan/Titanlegierungen, harte Alulegierungen (hoher Si-Anteil) | Feines Zerspanen = mittlerer Materialabtrag | 450-600 |
| | Hochwarmfeste Werkstoffe | Nickelbasis- und Kobaltbasislegierungen (Triebwerk- und Turbinenbau) | | |
| Gusseisen | Graues Gusseisen, weißes Gusseisen | Gusseisen mit Lamellengraphit EN-GJL (GG), mit Kugelgraphit/Späroguss EN-GJS (GGG), weißer Temperguss EN-GJMW (GTW), schwarzer Temperguss EN-GJMB (GTS) | Feines Zerspanen = mittlerer Materialabtrag | 650-750 |

| Material groups | | | Application | Cutting speed m/min |
|------------------------|---|---|---------------------------------------|---------------------|
| Steel, cast steel | Non-hardened, non-heat treated-steels up to 1200 N/mm ² (< 38 HRC) | Construction steels, carbon steels, tool steels, non-alloyed steels, case-hardened steels, cast steels | Fine machining = medium stock removal | 650-750 |
| | Hardened, heat-treated steels exceeding 1200 N/mm ² (> 38 HRC) | Tool steels, tempering steels, alloyed steel, cast steels | | 450-600 |
| Stainless steel (INOX) | Rust and acid-resistant steels | Austenitic and ferritic stainless steels | Fine machining = medium stock removal | 450-600 |
| Non-ferrous metals | Hard-non-ferrous metals | Bronze, titanium/titanium alloys, hard alu-alloys (high Si content) | Fine machining = medium stock removal | 450-600 |
| | High-temperature resistant materials | Nickel based alloys, cobalt based alloys (aircraft engine and turbine construction) | | |
| Cast iron | Grey cast iron, white cast iron | Cast iron with flake graphite EN-GJL, with nodular graphite cast iron EN-GJS, white annealed cast iron EN-GJMW, black cast iron EN-GJMB | Fine machining = medium stock removal | 650-750 |

| Schnittgeschwindigkeit • Cutting speed (m/min) | | | | |
|--|--|--------|---------|---------|
| | 450 | 600 | 650 | 750 |
| ∅ (mm) | Drehzahlen (min ⁻¹) • Rotational speed (rpm) | | | |
| 2 | 72.000 | 95.000 | 104.000 | 120.000 |
| 3 | 48.000 | 64.000 | 68.000 | 80.000 |

BLACK-TEC-beschichtet
BLACK-TEC-coated

Karnasch BLACK-TEC-Beschichtung wurde speziell für NE-Metalle entwickelt (Verzahnung HP-7) hervorragende Reib- und Gleiteigenschaften verringern die Bildung von Aufbauschneiden.

Karnasch BLACK-TEC coating is specifically designed for non-ferrous metals (Cut HP-7). Low friction and excellent chip clearance characteristics reduce clogging of the flutes.

| Werkstoffgruppen | | | Bearbeitung | Schnittgeschwindigkeit (m/min) |
|-------------------------------|---|---|--|--------------------------------|
| NE-Metalle | Weiche NE- Metalle | Alulegierungen, Messing, Kupfer, Zink | Grobes Zerspanen = Hoher Materialabtrag | 600 - 1100 |
| | | | Feines Zerspanen = Geringer Materialabtrag | 900 - 1100 |
| | Harte NE- Metalle | Bronze, Titan, harte Alulegierungen (hoher Si-Anteil) | Grobes Zerspanen = Hoher Materialabtrag | 600 - 1100 |
| | | | Feines Zerspanen = Geringer Materialabtrag | 900 - 1100 |
| Kunststoff, andere Werkstoffe | Faserverstärkte Kunststoffe (GFK/CFK) thermoplastische Kunststoffe, Hartgummi | Grobes Zerspanen = Hoher Materialabtrag | 500 - 1100 | |
| | | Feines Zerspanen = Geringer Materialabtrag | 500 - 1100 | |

| Material groups | | | Application | Cutting speed m/min |
|---------------------------|--|---|---------------------------------------|---------------------|
| Non-ferrous metals | Soft non-ferrous metals | Alu alloys, brass copper, zinc | Coarse machining = high stock removal | 600 - 1100 |
| | | | Fine machining = low stock removal | 900 - 1100 |
| | Hard non-ferrous metals | Bronze, titanium, hard aluminum alloys, (high Si content) | Coarse machining = high stock removal | 600 - 1100 |
| | | | Fine machining = low stock removal | 900 - 1100 |
| Plastics, other materials | Fibre-reinforced plastic (GFK/CFK) thermoplastics, hard rubber | Coarse machining = high stock removal | 500 - 1100 | |
| | | Fine machining = low stock removal | 500 - 1100 | |

Index

Einsatzgebiete:
Zu bearbeitende Werkstoffe:
Drehzahlempfehlung:

Feinmechanik, Werkzeugbau
Alulegierungen, Leichtmetalle, Buntmetalle, Kunststoffe
ca. 70.000 U/min

Applications:
For use on:
Recommended operating speed:

Precision engineering, tool manufacture
Aluminum alloys, light metals, copper and copper alloys, plastics
approx. 70,000 RPM

HP-1

Für Superlegierungen. Extrem robuste Kreuzverzahnung
 For super alloys. Extremely robust cross cutting style

ANWENDUNG · APPLICATION

| | | | | | | | | | | |
|---|---|---|---|--|---|--|---|---|--|--|
|  Stahl Steel |  Gehärteter Stahl Hardened steel |  Edelstahl Stainless |  Gusseisen Cast iron |  Titan Titanium |  Cermet Cermet |  Nickel Nickel |  Kupfer, Kupferlegierungen Copper, copper alloys |  Alu Alu |  Kunststoffe GFK/CFK Plastics GRP/CRP | <input checked="" type="checkbox"/> OPTIMAL OPTIMAL |
| <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> GUT GOOD |

- Schlagunempfindlichkeit (Zahnausbrüche, Ablätzungen, Kopfbrüche werden minimiert)
 - Exzellente Kontrolle und Laufruhe
 - Mittlere bis hohe Zerspanleistung
 - Speziell für schwierigste Superlegierungen + Edelstähle wie: Titan, Inconel, Hastelloy, Waspaloy, Duplex, Amanox usw.
- Anwendungsbeispiel: Bearbeitung von Flugzeug Turbinenschaufeln, Gasturbinen

- Impact resistance (tooth breakages, chipping, head breakages are minimised)
 - Excellent control and quiet running
 - Medium to high cutting action
 - Especially for the most difficult super alloys + stainless steel, such as: Titanium, Inconel, Hastelloy, Waspaloy, Duplex, Amanox, etc.
- Application example: Working aeroplane turbine blades, gas turbines

BLUE-TEC-beschichtet
 BLUE-TEC-coated

Die für Frässtifte optimierte und patentierte BLUE-TEC-Beschichtung ergibt einzigartige Standzeiten und Performance in allen Stahlsorten.

Patented BLUE-TEC coating, specifically designed for burrs, gives outstanding tool life and excellent performance on all metals.

| Werkstoffgruppen | | | Bearbeitung | Schnittgeschwindigkeit (m/min) |
|--|---|---|---|--------------------------------|
| Schwierigste Legierungen Superlegierungen | Titan, Inconel, Hastelloy, Waspaloy, Duplex, Amanox Udimet, Nicrofer, Conicro, René | Motoren-, Turbinen- und Triebwerksbau Energietechnik, Luft- und Raumfahrt Öl- und Gasindustrie, Gasturbinen | grobes Zerspanen = hoher bis mittlerer Materialabtrag | 250-350 |
| Edelstahl (INOX) | Rost- und säurebeständige Stähle | Austenitische und ferritische Edelstähle | grobes Zerspanen = hoher bis mittlerer Materialabtrag | 250-350 |
| Stahl, Stahlguss | Ungehärtet, nicht vergütete Stähle bis 1200 N/mm ² (<38 HRC) | Baustähle, Kohlenstoffstähle, Werkzeugstähle, unlegierte Stähle, Einsatzstähle, Stahlguss | grobes Zerspanen = hoher bis mittlerer Materialabtrag | 450-600 |
| | Gehärtete, vergütete Stähle über 1200 N/mm ² (>38 HRC) | Werkzeugstähle, Vergütungsstähle, legierte Stähle, Stahlguss | | 250-350 |
| Gusseisen | Graues Gusseisen, weißes Gusseisen | Gusseisen mit Lamellengraphit EN-GJL (GG), mit Kugelgraphit/ Sphäroguss EN-GJS (GGG), weißer Temperguss EN-GJMW (GTW), schwarzer Temperguss EN-GJMB (GTS) | grobes Zerspanen = hoher bis mittlerer Materialabtrag | 450-600 |

| Material groups | | | Application | Cutting speed m/min |
|---------------------------------|---|--|---|---------------------|
| difficult alloys superalloys | Titan, Inconel, Hastelloy, Waspaloy, Duplex, Amanox Udimet, Nicrofer, Conicro, René | Engines, aircraft engine and turbine construction, energy technology, aerospace oil and gas industry, gas turbines | Coarse machining = high to medium stock removal | 250-350 |
| Stainless steel (INOX) | Rust and acid-resistant steels | Austenitic and ferritic stainless steels | Coarse machining = high to medium stock removal | 250-350 |
| Steel cast steel | Non-hardened, non-heat treated steels up to 1200 N/mm ² (<38 HRC) | Construction steels, carbon steels, tool steels, non-alloyed steels, case-hardened steels, cast steels | Coarse machining = high to medium stock removal | 450-600 |
| | Hardened, heat treated steels exceeding 1200 N/mm ² (>38 HRC) | tool steels, tempering steels, alloyed steels, cast steels | | 250-350 |
| Cast iron | Grey cast iron, white cast iron | Cast-iron with flake graphite EN-GJL (GG), with nodular graphite cast iron EN-GJS (GGG), white anneales cast iron EN-GJMW (GTW), black cast iron EN-GJMB (GTS) | Coarse machining = high to medium stock removal | 450-600 |

✓ OPTIMAL
OPTIMAL

✓ GUT
GOOD

- Exzellente Oberflächengüte
- Vorzugsweise für feines Entgraten von allen Stahlsorten wie:
 - Bis zu extra harten Stählen ca. 70 HRC
 - Gusseisen
 - Edelstahl (INOX)
 - Hochwarmfeste Werkstoffe wie z.B. Nickel-Basis + Kobalt-Basis + Kobalt-Basis Legierungen

- Excellent surface finish
- Preferred for fine deburring all ferrous metals, such as:
 - Up to extra hard steel approx. 70 HRC
 - Cast iron
 - Stainless steel (INOX)
 - Heat resistant substances, such as, e.g. nickel based + cobalt based alloys

BLUETEC
BESCHICHTET
COATED

BLUE-TEC-beschichtet
BLUE-TEC-coated

Die für Frässtifte optimierte und patentierte BLUE-TEC-Beschichtung ergibt einzigartige Standzeiten und Performance in allen Stahlsorten.

Patented BLUE-TEC coating, specifically designed for burrs, gives outstanding tool life and excellent performance on all metals.

| Werkstoffgruppen | | | Bearbeitung | Schnittgeschwindigkeit (m/min) |
|------------------|---|---|---|--------------------------------|
| Stahl, Stahlguss | Ungehärtete, nicht vergütete Stähle bis 1200 N/mm ² (< 38 HRC) | Baustähle, Kohlenstoffstähle, Werkzeugstähle, unlegierte Stähle, Einsatzstähle, Stahlguss | Feines Zerspanen = mittlerer Materialabtrag | 650-750 |
| | Gehärtete, vergütete Stähle über 1200 N/mm ² (> 38 HRC) | Werkzeugstähle, Vergütungsstähle, legierte Stähle, Stahlguss | | 450-600 |
| Edelstahl (INOX) | Rost- und säurebeständige Stähle | Austenitische und ferritische Edelstähle | Feines Zerspanen = mittlerer Materialabtrag | 450-600 |
| NE-Metalle | Harte NE-Metalle | Bronze, Titan/Titanlegierungen, harte Alulegierungen (hoher Si-Anteil) | Feines Zerspanen = mittlerer Materialabtrag | 450-600 |
| | Hochwarmfeste Werkstoffe | Nickelbasis- und Kobaltbasislegierungen (Triebwerk- und Turbinenbau) | | |
| Gusseisen | Graues Gusseisen, weißes Gusseisen | Gusseisen mit Lamellengraphit EN-GJL (GG), mit Kugelgraphit/Späroguss EN-GJS (GGG), weißer Temperguss EN-GJMW (GTW), schwarzer Temperguss EN-GJMB (GTS) | Feines Zerspanen = mittlerer Materialabtrag | 650-750 |

| Material groups | | | Application | Cutting speed m/min |
|------------------------|---|---|---------------------------------------|---------------------|
| Steel, cast steel | Non-hardened, non-heat treated-steels up to 1200 N/mm ² (< 38 HRC) | Construction steels, carbon steels, tool steels, non-alloyed steels, case-hardened steels, cast steels | Fine machining = medium stock removal | 650-750 |
| | Hardened, heat-treated steels exceeding 1200 N/mm ² (> 38 HRC) | Tool steels, tempering steels, alloyed steel, cast steels | | 450-600 |
| Stainless steel (INOX) | Rust and acid-resistant steels | Austenitic and ferritic stainless steels | Fine machining = medium stock removal | 450-600 |
| Non-ferrous metals | Hard-non-ferrous metals | Bronze, titanium/titanium alloys, hard alu-alloys (high Si content) | Fine machining = medium stock removal | 450-600 |
| | High-temperature resistant materials | Nickel based alloys, cobalt based alloys (aircraft engine and turbine construction) | | |
| Cast iron | Grey cast iron, white cast iron | Cast iron with flake graphite EN-GJL, with nodular graphite cast iron EN-GJS, white annealed cast iron EN-GJMW, black cast iron EN-GJMB | Fine machining = medium stock removal | 650-750 |

| Schnittgeschwindigkeit • Cutting speed (m/min) | | | | |
|--|--|--------|---------|---------|
| | 450 | 600 | 650 | 750 |
| ∅ (mm) | Drehzahlen (min ⁻¹) • Rotational speed (rpm) | | | |

✓ OPTIMAL
OPTIMAL
✓ GUT
GOOD

- Extrem hoher Materialabtrag (Schuppen)
- Für alle Stahlsorten wie:
 - Gusseisen
 - Stahl < 60 HRC
- Auch für Kupfer, Messing, Bronze
- Für den harten Schruppeinsatz wie z.B. auf Werften, Gießereien entwickelt.
- Extremely fast metal removal (roughing)
- For all ferrous metals, such as:
 - Cast iron
 - Steel < 60 HRC
- Also for copper, brass, bronze
- Developed for use in tough roughing conditions, such as, e.g., on shipyards, foundries.

BLUE-TEC-beschichtet
BLUE-TEC-coated

Die für Frässtifte optimierte und patentierte BLUE-TEC-Beschichtung ergibt einzigartige Standzeiten und Performance in allen Stahlsorten.

Patented BLUE-TEC coating, specifically designed for burrs, gives outstanding tool life and excellent performance on all metals.

| Werkstoffgruppen | | | Bearbeitung | Schnittgeschwindigkeit (m/min) |
|------------------|---|---|---|--------------------------------|
| Stahl, Stahlguss | Ungehärtete, nicht vergütete Stähle bis 1200 N/mm ² (< 38 HRC) | Baustähle, Kohlenstoffstähle, Werkzeugstähle, unlegierte Stähle, Einsatzstähle, Stahlguss | Grobes Zerspanen = hoher Materialabtrag mit Schlagbelastung | 250 - 600 |
| | Gehärtete, vergütete Stähle über 1200 N/mm ² (> 38 HRC) | Werkzeugstähle, Vergütungsstähle, legierte Stähle, Stahlguss | | 250 - 350 |
| NE-Metalle | Hochwarmfeste Werkstoffe | Nickelbasis- und Kobaltbasislegierungen, (Triebwerk- und Turbinenbau) | Grobes Zerspanen = hoher Materialabtrag mit Schlagbelastung | 250 - 450 |
| Gusseisen | Graues Gusseisen, weißes Gusseisen | Gusseisen mit Lamellengraphit EN-GJL (GG), mit Kugelgraphit/ Sphäroguss EN-GJS (GGG), weißer Temperguss EN-GJMW (GTW), schwarzer Temperguss EN-GJMB (GTS) | Grobes Zerspanen = hoher Materialabtrag mit Schlagbelastung | 250 - 600 |

| Material groups | | | Application | Cutting speed m/min |
|--------------------|---|--|--|---------------------|
| Steel cast steel | Non-hardened, non-heat treated steels up to 1200 N/mm ² (< 38 HRC) | Construction steels, carbon steels, tool steels, non-alloyed steels, case-hardened steels, cast steels | Coarse machining = high stock removal with impact load | 250 - 600 |
| | Hardened, heat treated steels exceeding 1200 N/mm ² (> 38 HRC) | tool steels, tempering steels, alloyed steels, cast steels | | 250 - 350 |
| Non-Ferrous metals | High-temperature resistant materials | Nickel based alloys (aircraft engine and turbine construction) | Coarse machining = high stock removal with impact load | 250 - 450 |
| Cast iron | Grey cast iron, white cast iron | Cast-iron with flake graphite EN-GJL (GG), with nodular graphite cast iron EN-GJS (GGG), white annealed cast iron EN-GJMW (GTW), black cast iron EN-GJMB (GTS) | Coarse machining = high stock removal with impact load | 250 - 600 |

| Schnittgeschwindigkeit • Cutting speed (m/min) | | | | |
|--|--|--------|--------|--------|
| | 250 | 500 | 600 | 900 |

HP-9

Speziell für Edelstahl. Extrem hohe Zerspanleistung

Epecially for stainless steel. Extremely high machining output.

ANWENDUNG · APPLICATION

| | | | | | | | | | |
|---|---|---|---|--|---|--|---|---|--|
|  Stahl Steel |  Gehärteter Stahl Hardened steel |  Edelstahl Stainless |  Gusseisen Cast iron |  Titan Titanium |  Cermet Cermet |  Nickel Nickel |  Kupfer, Kupferlegierungen Copper, copper alloys |  Alu Alu |  Kunststoffe GFK/CFK Plastics GRP/CRP |
|---|---|---|---|--|---|--|---|---|--|

✓ OPTIMAL
OPTIMAL
✓ GUT
GOOD

- Extrem hohe Zerspanleistung und Standzeit für alle austenitischen, rost- und säurebeständigen Stähle.
- Nickelbasis und Titanlegierungen (Drehzahl reduzieren um Funkenbildung zu vermeiden)
- Hochwertige Oberflächengüte
- Keine Anlauffarben am Werkstück durch geringe Wärmeentwicklung

- Extremely high machining output and service life for all austenitic, rust- and acid-resilient steels.
- Nickel basis and titanium alloy (reduce speed to avoid sparking)
- High-quality surface.
- No annealing colours at the workpiece due to low heat development.

- Bis zu 60% höhere Zerspanleistung im Vergleich zu herkömmlichen Kreuzverzahnungen.
- Hohe Aggressivität erzeugt große Späne mit hervorragender Spanabfuhr.
- Keine Anlauffarben am Werkstück durch geringe Wärmeentwicklung

- Up to 60% higher machining output as compared to conventional cross cut.
- High aggressiveness produces large chips with outstanding chip removal.
- No annealing colours at the workpiece due to low heat development.

Extrem feine Kreuzverzahnung Extremely fine cross cutting style

ANWENDUNG · APPLICATION

| | | | | | | | | | | |
|---|---|---|---|--|---|--|---|---|--|--|
|  Stahl Steel |  Gehärteter Stahl Hardened steel |  Edelstahl Stainless |  Gusseisen Cast iron |  Titan Titanium |  Cermet Cermet |  Nickel Nickel |  Kupfer, Kupferlegierungen Copper, copper alloys |  Alu Alu |  Kunststoffe GFK/CFK Plastics GRP/CRP | <input checked="" type="checkbox"/> OPTIMAL <input checked="" type="checkbox"/> GUT GOOD |
|---|---|---|---|--|---|--|---|---|--|--|

- Exzellent für die: Feinbearbeitung · Extrem feine Putzarbeiten · Korrekturen im Werkzeug- und Formenbau · Schleifen/ Schärfen von Schnittwerkzeugen
- Eigenschaften: Gutes Abtragverhalten · Vibrationsarm · Exzellente Kontrolle/Führung im Handeinsatz · Hohe Oberflächengüte
- Vorteile: Es können nahezu alle Werkstoffe bis zu einer Härte von 70 HRC bearbeitet werden.
In diesem Bereich werden üblicherweise Keramik-Schleifstifte verwendet.
Die neue Micro-Verzahnung garantiert:
 - Keine Geometrieänderung durch Abnutzung/Verschleiß gegenüber Schleifstifte.
 - Wesentlich höheren Materialabtrag sowie Standzeit gegenüber Schleifstifte
- Excellent for: Finishing · Extremely fine cleaning work · Corrections in tool and mould construction · Grinding/ sharpening of cutting tools
- Characteristics: Good stock removal · Low vibrations · Excellent control and guidance under handheld conditions. High surface quality
- Advantages: Micro-cut can be used for work on almost all materials up to a hardness of 70 HRC.
In this area usually mounted points are used.
- Unlike with mounted points, there is no change in geometry due to wear and tear.
- Unlike with mounted points, there is much higher performance, surface quality and lifetime

BLUE-TEC-beschichtet
BLUE-TEC-coated

Die für Frässtifte optimierte und patentierte BLUE-TEC-Beschichtung ergibt einzigartige Standzeiten und Performance in allen Stahlsorten.

Patented BLUE-TEC coating, specifically designed for burrs, gives outstanding tool life and excellent performance on all metals.

| Werkstoffgruppen | | | Bearbeitung | Schnittgeschwindigkeit (m/min) |
|------------------|---|---|---|--------------------------------|
| Stahl, Stahlguss | Ungehärtete, nicht vergütete Stähle bis 1200 N/mm ² (< 38 HRC) | Baustähle, Kohlenstoffstähle, Werkzeugstähle, unlegierte Stähle, Einsatzstähle, Stahlguss | Feines Zerspanen = mittlerer Materialabtrag | 650-750 |
| | Gehärtete, vergütete Stähle über 1200 N/mm ² (> 38 HRC) | Werkzeugstähle, Vergütungsstähle, legierte Stähle, Stahlguss | | 450-600 |
| Edelstahl (INOX) | Rost- und säurebeständige Stähle | Austenitische und ferritische Edelstähle | Feines Zerspanen = mittlerer Materialabtrag | 450-600 |
| NE-Metalle | Harte NE-Metalle | Bronze, Titan/Titanlegierungen, harte Alulegierungen (hoher Si-Anteil) | Feines Zerspanen = mittlerer Materialabtrag | 450-600 |
| | Hochwarmfeste Werkstoffe | Nickelbasis- und Kobaltbasislegierungen (Triebwerk- und Turbinenbau) | | |
| Gusseisen | Graues Gusseisen, weißes Gusseisen | Gusseisen mit Lamellengraphit EN-GJL (GG), mit Kugelgraphit/Späroguss EN-GJS (GGG), weißer Temperguss EN-GJMW (GTW), schwarzer Temperguss EN-GJMB (GTS) | Feines Zerspanen = mittlerer Materialabtrag | 600-750 |

| Material groups | | | Application | Cutting speed m/min |
|------------------------|---|---|---------------------------------------|---------------------|
| Steel, cast steel | Non-hardened, non-heat treated-steels up to 1200 N/mm ² (< 38 HRC) | Construction steels, carbon steels, tool steels, non-alloyed steels, case-hardened steels, cast steels | Fine machining = medium stock removal | 650-750 |
| | Hardened, heat-treated steels exceeding 1200 N/mm ² (> 38 HRC) | Tool steels, tempering steels, alloyed steel, cast steels | | 450-600 |
| Stainless steel (INOX) | Rust and acid-resistant steels | Austenitic and ferritic stainless steels | Fine machining = medium stock removal | 450-600 |
| Non-ferrous metals | Hard-non-ferrous metals | Bronze, titanium/titanium alloys, hard alu-alloys (high Si content) | Fine machining = medium stock removal | 450-600 |
| | High-temperature resistant materials | Nickel based alloys, cobalt based alloys (aircraft engine and turbine construction) | | |
| Cast iron | Grey cast iron, white cast iron | Cast iron with flake graphite EN-GJL, with nodular graphite cast iron EN-GJS, white annealed cast iron EN-GJMW, black cast iron EN-GJMB | Fine machining = medium stock removal | 600-750 |

*11 5021 043 / 11 5022 043

*11 5021 046 / 11 5022 046

* Davon 15 mm verzahnt | Of which 15 mm teathed

- * Durch Verjüngung eines Ø 6 mm Frässtiftes auf Ø 3 mm oder Ø 4 mm wird die Arbeitszeit um ca. die Hälfte reduziert, da weniger Material zerspant werden muss.
- Durch Ø 6 mm Schaft wesentlich bruchunempfindlicher als durchgehend Ø 3 mm oder Ø 4 mm Schaft
- Bei Ø 3 mm, 4 mm, 6 mm kann mit der gleichen Ø 6 mm Spannzange gearbeitet werden.
- Die Kernziehschutzblende muss in der Regel wegen des geringen Fräskopf-Durchmessers nicht zerstört werden.

- * By tapering of a 6 mm burr to Ø 3 mm or Ø 4 mm working time is reduced by about half, because less material needs to be machined.
- Because of its 6 mm shank, significantly less susceptible to breakage than continuous Ø 3 mm or Ø 4 mm shank
- At Ø 3 mm, Ø 4 mm the same collet can be used for Ø 6 mm
- Because of the limited diameter of the burr head, the core drawing tray may not be disturbed

Vollhartmetall-Bohrfräser der neuesten Generation. Öffnet Schließzylinder in Rekordzeit. Beste Ergebnisse werden mit Geradschleifer erzielt (siehe Seite 1110/1111). Aufbohrungen sind mit Bohrmaschinen/Akku-Bohrmaschinen möglich.

In Verbindung mit Frässtiften (Seite 776) ergibt sich die ideale Werkzeugkombination.

Mit dem Bohrfräser wird der Zylinder in kürzester Zeit geradlinig aufgebohrt. In der Regel sollte der Schließzylinder nun bereits zu schließen sein. Falls nicht, z.B. bei besonderen Bohrschutzsicherungen, wird die Bohrung mit einem Frässtift (siehe Seite 777) seitlich erweitert.

Solid carbide drill of the newest generation. Opens locking cylinders in record time. Best results are achieved with straight grinders (see page 1110/1111). Also drilling with drilling/battery drills. Together with burrs (page 776), the ideal tool combination is achieved. With the drill, the cylinder is drilled in a straight line in the shortest possible time. Usually, the locking cylinder can already be closed now. If not, e.g., in case of special drill prevention, the borehole is sideways expanded with a burr (see page 777).

Film
Movie

Zu verwenden mit einer Bohrmaschine/starke Akku-Bohrmaschine. Mit dieser Lochsäge ist es möglich, die vor dem Kern liegende, gehärtete Stirnplatte dieses speziellen Hochsicherheitszylinders zu durchdringen um anschließend den Kern herausziehen zu können.

Werkzeugmerkmale:

- 4 x HM-Zähne Ø 15,2
- Gefederte Stiftführung (6,8 mm) zur Zentrierung im Schließkanal
- Tiefenanschlag

To be used with a drilling machine/strong battery drill. With this holesaw it is possible to penetrate the hardened front plate of this special high security locking cylinder that sits in front of the core and then to retrieve the core.

Properties of the tool:

- 4 x T.C.T. teeth Ø 15.2
- Sprung pin guide (6.8 mm) for centring in the locking channel
- Depth stop

Diese Frässtifte sind geeignet zum Umrissfräsen, Besäumen, Nuten und Bohren der großen Bandbreite von Faserverstärkten Kunststoffen (Fiberglas, GFK CFK). Weiterhin für MMC, Metal Matrix Composites = schwer zerspanbare abrasive Verbundstoffe wie z.B. Leiterplatten, Verbindungen wie Keramik mit Glasfaser, Graphit, Carbon.

These routers are for contouring, grooving, drilling of a wide range of GFK, CFK, fiberglass reinforced plastics, as well as MMC (Metal Matrix Composites). MMC material such as printed circuit boards, composites such as ceramic with glass fiber, graphite, carbon etc.

Sollten höchste Standzeiten erwünscht sein, empfehlen wir eine Diamantbeschichtung. Auf Anfrage.

If highest lifetime is required do we recommend a diamond coating. On request.

MINI-UNI

Einsatzgebiete: Feinmechanik, Schmuckindustrie, Turbinenbau, Werkzeugbau
Zu bearbeitende Werkstoffe: Edelstähle, Buntmetalle, Zinkdruckguss, weiche Keramiken, Titanlegierungen
Drehzahlempfehlung: ca. 70.000 U/min

Applications: Precision engineering, jewellery industry, turbine manufacture, tool manufacture
For use on: stainless steel, copper and copper alloys, zinc pressure die castings soft ceramics, titanium alloys
Recommended operating speed: +/- 70,000 RPM

Die Kombination aus den gängigsten Kopfformen wie Zylinder ZYA + ZYB, Walzenrund WRC, Rundbogen RBF, Spitzbogen SPG, Rundkegel KEL, Winkel KSJ + KSK mit dem einzigartigen **COMBI+CURVE Führungs-Rundungs-Entgratungssystem** ergeben folgende Vorteile:

- Ideal zum schnellen Kantenverrunden.
- Die Kanten werden nicht einfach flach abgeschrägt, sondern erhalten durch das einzigartige **Führungs-Rundungs-Entgratungssystem** eine saubere Rundung.
- Der **COMBI+CURVE** zentriert sich selbst, immer mittig zur Kante.
- Durch die einzigartige Selbstzentrierung ist ein Abgleiten oder Ver-rutschen an scharfen Kanten nahezu unmöglich.
- Somit besteht eine deutlich bessere Kontrolle und garantiert einen einfachen und schnellen Materialabtrag.

Anwendbar in den verschiedensten Materialien wie: Gusseisen, Stahl < 60 HRC, Edelstahl (INOX), Nickelbasis- und Titanlegierungen, sowie Kupfer, Messing und Bronze

The combination of the most used head shapes as cylinder ZYA + ZYB, ball nosed cylinder WRC, ball nosed tree RBF, tree SPG, ball nosed cone KEL, countersink KSJ + KSK with the unique **COMBI+CURVE guiding-rounding-deburring system** result the following advantages:

- The ideal tool for extremely fast chamfering. The edges are not simply bevelled, but by the unique guiding-rounding-deburring system smoothly rounded.
- **COMBI+CURVE guiding-rounding-deburring system** always centres itself on the centre of the edge.
- Slipping off the edge is almost impossible. This gives best control and guarantees faster and easier removal of material.

Can be used on a wide variety of material e.g. cast iron, steel < 60 HRC, stainless steel (INOX), nickel-based and titanium alloys, copper, brass and bronze.

CURVE

Der Radius an der Spitze des Frässtifts dient als Führung und Abstützung. Beschädigungen am Werkstück werden vermieden.

The radius at the front of the burr serves as a guide and a support. Damage to the workpiece can thus be avoided.

KARNASCH PROFESSIONAL TOOLS WORLDWIDE

The rapid progress of technology always poses new challenges to companies from the metal-processing industry. It is more important for these companies to have future-oriented and reliable partner by their side who will not settle for targets achieved but provides impulses for new developments.

KARNASCH Professional Tools has offered an innovative and diverse product range and professional service towards its customers in more than 50 countries. The amount of know-how in our products becomes evident in daily use. Equipped with an extraordinary performance capacity, our products convince customers from all industries and around the world. Our past distinction will continue in future with ever-new product innovations as well. You may continue to count on our excellent service.

PRODUKTBESCHREIBUNG:

Die neuen COMBI+FORM Frässtifte bieten ein Maß an noch nie zuvor gesehener Vielseitigkeit.

COMBI+FORM Frässtifte sind hervorragend geeignet zum Nachbearbeiten vom komplexen Werkstücken. Durch die Zusammenführung von verschiedenen Formen, werden Rüstkosten minimiert. Zeitaufwendige Werkzeugwechsel, Kauf weiterer Formen wird vermieden. Entgraten, Kanten-, sowie verschiedenartigste Multifunktionsarbeiten sind mit nur einem Werkzeug möglich.

Die COMBI+FORM Frässtifte sind geeignet für eine Vielzahl von Metallen und Stahlsorten wie: Gusseisen, Stahl <60 HRC, Edelstahl (INOX), Nickelbasis- und Titanlegierungen, Kupfer, Messing und Bronze

PRODUCT DESCRIPTION:

COMBI+FORM versatility to suit almost any application

Just like any multi-tool in the DIY sector, there is now high performance multipurpose burrs for the industry. The COMBI+FORM line has been developed to reduce downtime and cover multi-application processes for metal removal. These exclusive new shapes will cover your deburring, edging and blending work in one simple burr solution. This range is ideal for complex parts where different shapes are required. The COMBI+FORM will maximise your productivity.

Features and benefits

- Reduced downtime for end user
- Special tooth geometry manufactured using the latest CNC machines
- The highest quality sintered tungsten carbide is used to ensure consistent performance
- A versatile burr to be used on a wide range of materials and processes

Can be used on a wide variety of material e.g. cast iron, steel <60 HRC, stainless steel (INOX), nickel-based and titanium alloys, copper, brass and bronze

Anwendungsbeispiele / Application examples

Reifenreparatur

Frässtifte für exakte Schadensbearbeitung an Radial und Diagonalreifen.

Geeignet für Reparaturen an Autoreifen, LKW Reifen, Reifen für Fahrzeuge in der Landwirtschaft sowie Baufahrzeugreifen.

Die speziell angepasste Schneidgeometrie ermöglicht eine saubere und Professionelle Bearbeitung des Lochkanals.

Vorgehensweise – Bearbeiten des Lochkanals

Mit einem Vorstecher ist der Verlauf des Lochkanals von innen nach außen festzustellen. Somit wird die Schadensgröße innen und außen am Reifen gemessen (max. 6 mm).

Der Lochkanal wird mit einem **passenden Frässtift** zuerst von innen nach außen und dann von außen nach innen bearbeitet und gesäubert.

Hierbei ist besonders darauf zu achten, dass der Schadenskanal genau durchdrungen wird, ohne den Schaden zu vergrößern, intakte Cordseile nicht verletzt werden und eine Aufweitung/Lösung des umliegenden Gewebes vermieden wird.

Werden hierbei weiterreichende Schäden wie Rostbildung oder Lösung festgestellt, muss der Reifen einer nochmaligen Prüfung auf die Reparaturfähigkeit mit vorgefertigten Reparaturkörpern unterzogen werden.

Tyre repair

Rotating mills for precise damage processing at radial and diagonal tyres.

Suitable for repairs to car tyres, truck tyres, tyres for agricultural vehicles and construction vehicle tyres.

The specifically adjusted cutting geometry permits clean and professional processing of the hole channel.

Procedure – Processing the hole channel

The course of the hole channel from the inside out is to be determined with a pricking awl. This measures the damage size on the inside and the outside of the tyre (max. 6 mm).

The hole channel is first processed and cleaned with a **matching rotating mill** from the inside outwards and then from the outside inwards.

For this, it must be particularly observed that the damage channel is penetrated precisely without enlarging the damage, that intact cord ropes are not damaged and that expansion/loosening of the surrounding tissue is avoided.

If further damage such as rust formation or loosening is found, the tyre must be inspected again for the possibility of repair with prefabricated repair elements.

Index

Deckel abnehmbar.
Wird dadurch auch zu
einem Tisch-Display.

Removable cover.
Becomes a Display.

Kunststoffkoffer und Display
leer. Zum selbst bestücken bis
138 Stück.

Plastic case and display. Can
be equipped with 138 pieces.

Robuster Kunststoffkoffer mit Tragegriff und Display in einem.

Ideal für den harten Einsatz auf der Baustelle.
Alle Frässtifte gesichert von außen durch schlagfesten Kunststoff.
Alle Frässtifte gesichert von innen durch festen Sitz in einer pass-
genauen Bohrung. Die Köpfe können **nicht** aufeinanderschlagen.

Mit bis zu 138 Stück Frässtifte zu bestücken.
Daher ebenfalls hervorragend geeignet als **Tisch-Display (Deckel
abnehmbar)** oder Lagerung Ihrer gängigsten Frässtifte.

Wählen Sie aus unserem Gesamtsortiment Frässtifte mit Schaft
6 oder 8 mm. Die Gesamtlänge (L1) des Frässtifts sollte 86 mm
nicht überschreiten. **Wir beraten Sie gerne über die gängigsten
Frässtifte.**

Bei Bestellung eines voll bestückten Koffers (138 Stück) ist der
Koffer gratis. Sie bezahlen nur den Inhalt.

Robust plastic case with carry handle and display in one.

Ideal for hard use on the construction site.
All rotary burrs secured from the outside by impact-resilient plastic.
All rotary burrs secured from the inside by tight fit in a precisely
fitting bore. The heads **cannot** touch.

Can be equipped with 138 rotary mills. It is also suitable as **table
display (lid removable)** with our most popular rotary mills.

Choose rotary burrs with a 6 or 8 mm shaft from our overall rotary
burrs range. The overall length (L1) of the rotary burr should not
exceed 86 mm. **We will gladly advise you about the most common
rotary burrs.**

When ordering a fully equipped case (138 pieces), the **case** is
enclosed **for free**. You only need to pay for the contents.

Festlegung der Schnittgeschwindigkeit Vc
 Determination of cutting speed Vc

$$Vc \text{ (m/min)} = \frac{D \cdot \pi \cdot n}{1000}$$

- fz (mm/z) = Vorschub pro Zahn · Feed per tooth
- D (mm) = Sägendurchmesser · Saw blade diameter
- Z = Anzahl der Zähne · Number of teeth
- n (min⁻¹) = Drehzahl · rpm

Festlegung der Vorschubgeschwindigkeit Vf
 Determination of feed rate Vf

$$Vf \text{ (mm/min)} = fz \cdot n \cdot Z$$

Festlegung der Drehzahl n
 Determination of revolution speed n

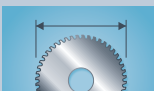

$$n \text{ (min}^{-1}\text{)} = \frac{Vc \cdot 1000}{D \cdot \pi}$$

Hochleistungs-Kreissägeblätter für Stahl, Edelstahl, Schienen
High-Performance circular saw blades for steel, stainless steel, rails

10 7050

✓ OPTIMAL · OPTIMAL ✓ GUT · GOOD ✓ MÖGLICH · POSSIBLE

| | | | |
|---|---|-----------|-----------------|
| ✓ |  | Baustahl | Mild steel |
| ✓ |  | Edelstahl | Stainless steel |
| ✓ |  | Schienen | Rails |

ANWENDUNG · APPLICATION

Zum Sägen von Stahl, Edelstahl, Eisenbahnschienen. Profile und Vollmaterial.
Erhältlich von Durchmesser 250 mm bis 2250 mm.

For cutting steel, stainless steel, rails. Profiles and solid material.
Available from diameter 250 mm to 2250 mm.

FÜR DIE ABGABE EINES ANGEBOTES BENÖTIGEN WIR FOLGENDE ANGABEN:

Abmessung, Stückzahl, DIN-Normbezeichnung des zu sägenden Materials, die Abmessung des zu sägenden Materials, Vorschub, Maschinentyp. Falls vorhanden Zeichnung der Schneidengeometrie oder Musterblatt.

WE REQUIRE THE FOLLOWING INFORMATION FOR DELIVERY OF AN ORDER:

Dimensions, Quantity, DIN standard designation of the material to be cut, the dimensions of the material to be cut, Feed, machine type, diagram of the cutting geometry or sample blade, if available.

SPR

- > Universalverzahnung für Profile und Vollmaterial
- > Universal toothing for profiles and solid material

TFB

- > Spezialverzahnung für Vollmaterial
- > Special toothing for solid material

MASCHINE · MACHINE

Für Kreissägeautomaten / stabile Maschinen wie z.B. FRAMAG, LINSINGER, MFL auf denen HM-Bestückte Kreissägeblätter eingesetzt werden können.

- Material muss vibrationsfrei gespannt sein
- Umfangsgeschwindigkeit für Vollmaterial je nach Materialgüte 80-140 m/min erforderlich
Stufenlos regelbarer Vorschub von 0,2-0,4 m/min
- Umfangsgeschwindigkeit bei Profile: Je nach Profil- oder Rohrstärke 110-160 m/min erforderlich
Stufenlos regelbarer Vorschub von 0,2-0,8 m/min.

For circular saw machines / stable production machines such as FRAMAG, LINSINGER, MFL on which carbide tipped circular saw blades can be installed.

- The material has to be fixed without causing vibrations
- Rotational speed for solid material depending on the material quality 80-140 m/min required
Infinitely adjustable feed rate of 0.2-0.4 m/min
- Rotational speed for profiles: Depending on the profile or tube thickness 110-160 m/min required
Infinitely adjustable feed rate of 0.2-0.8 m/min.

Determination of cutting speed Vc

BEMERKUNG · COMMENT

Die Kreissägen in dieser Rubrik sind nicht für die Serienfertigung von Stahlabschnitten konzipiert. Diese Sägen sind ideal um schnell nahezu alle Materialien zu sägen wie: Stahl, Nichteisenmetalle, Kunststoffe, Sandwich und Verbundmaterial. Also ideal als Baustellensäge sowie für den Laden- und Messebauer. Um Stahl in Serie/Produktion zu sägen, empfehlen wir Kreissägen siehe Seiten 886-889

The Circular Saws in this Category are not designed for the mass production of steel sections. These saws are ideal for fast cuts in almost any material such as: Steel, non-ferrous metals, plastics, composites and sandwich material. The perfect saws for the building site as well as for store and stand builders. If steel is to be cut in series / production, we recommend our circular saws see page 886-889

Baustahl · Edelstahl · Dünobleche · Sandwichmaterial

| Art. Ø mm | Type | Anwendung · Application | |
|---|---|---|-----|
| 10 7100 Ø mm 136-500  | Dry-Cutter Baustähle | Schwerpunkt ist das Trennen von Profilmaterial sowie Bleche bis ca. 6 mm Wandstärke | 892 |
| | Dry-Cutter mild steel | The focus is on cutting profile material and sheet metals up to 6 mm wall thickness | |
| 10 7130 Ø mm 136-355  | Dry-Cutter Baustähle "Einweg" | Schwerpunkt ist das Trennen von Profilmaterial sowie Bleche bis ca. 6 mm Wandstärke | 893 |
| | Dry-Cutter mild steel "throw away" BEST SELLER | The focus is on cutting profile material and sheet metals up to 6 mm wall thickness | |
| 10 7150 Ø mm 136-355  | Super Dry-Cutter Baustähle | Schwerpunkt ist das Trennen von Profilmaterial sowie Blechen. Profilmaterial Wandstärke ab 3 mm bis 8 mm sowie Bleche ab 3 mm bis 10 mm. | 894 |
| | Super Dry-Cutter mild steel | The focus is on cutting profile material and sheet metal. Profile material from 3 mm up to 8 mm wall thickness and sheet metal from 3 mm up to 10 mm thickness. | |
| 10 7300 Ø mm 136-500  | Dry-Cutter Edelstahl | Schwerpunkt ist das Trennen von Profilmaterial sowie Bleche aus Edelstahl bis ca. 4 mm Wandstärke | 896 |
| | Dry-Cutter stainless | The focus is cutting of profile material and sheets of stainless steel up to no more than 4 mm wall thickness | |
| 10 7400 Ø mm 136-500  | Dry-Cutter Sandwich | Schwerpunkt ist das Trennen von Dünblech bis ca. 3 mm sowie Sandwichmaterialien, Fassadenprofile u.ä. | 897 |
| | Dry-Cutter sandwich BEST SELLER | The focus is on cutting thin sheet up to approx. 3 mm and sandwich materials, façade profiles, etc. | |
| 10 8055 Ø mm 120-500  | Winkelschleifer + Brutal Einweg-Sägeblätter | Brutal Einweg-Sägeblätter zum Sägen „fast“ aller Materialien. Ideal für Bau und Handwerk | 899 |
| | Angle Grinder + Brutal disposable saw blades BEST SELLER | Brutal disposable saw blades for sawing "almost" any material. Ideal for construction and crafts | |

10 7100

Dry-Cutter Baustähle
Dry-Cutter mild steel

MASCHINE · MACHINE

Für Handkreissägen, Tauchsägen, Kapp- und Gehrungssägen, Radialarmsägen, Tisch- und Formatkreissägen, akkubetriebene Maschinen und passend ebenfalls für sogenannte DRY-CUTTER Maschinen mit reduzierten Drehzahlen wie zum Beispiel: JEPSON, RIDGID, ELU, RYOBI...

For portable machines, cross-cut saws, panel and sizing saws, mitre saws, table and radial arms saws, battery-driven saws and suitable also for so-called DRY CUTTER machines with reduced speeds such as: Jepson, RIDGID, ELU, RYOBI...

Bei Stahl ist es vorteilhaft mit reduzierten Drehzahlen (min^{-1}) zu arbeiten (siehe Tabelle unten). Die Verwendung von Schneidspray oder Mecutwachs erhöht wesentlich die Standzeit (Schneidöle siehe ab Seite 1144).

For steel, it is beneficial to work at reduced speeds (see table below). Use of cutting spray or Mecut wax increases the service life (coolants see from page 1144)

Ø 136-150 mm = 4000-3600 min^{-1} /rpm

Ø 160-200 mm = 3500-3000 min^{-1} /rpm

Ø 210-250 mm = 2800-1900 min^{-1} /rpm

Ø 260-330 mm = 1800-1500 min^{-1} /rpm

Ø 350-400 mm = 1400-1000 min^{-1} /rpm

Ø 420-500 mm = 900-700 min^{-1} /rpm

Bitte achten Sie unbedingt auf absolut feste und vibrationsfreie Befestigung des Werkstücks. Nichtbeachtung führt zu Zahnbruch/erhöhtem Verschleiß. Empfehlungen hierzu siehe Seite 895.

Please pay attention to absolutely stable/complete and vibration-free clamping of the work piece. Failure to observe leads to tooth breakage/increased wear. Recommendations can be found on page 895.

Trennen von Dünnschicht bis ca. 3 mm Wandstärke sowie Sandwichmaterial siehe Art. 10 7400 Seite 897

Trennen von Edelstahl bis ca. 4 mm siehe Art. 10 7300 Seite 896

Trennen von Aluprofilen/Alublechen siehe Art. 10 8000 Seite 902 / Art. 11 1100 Seite 911 / Art. 11 1120 Seite 913

Trennen von Holz, Kunststoffen, NE-Metallen wie Alu, Baustähle siehe Art. 10 8055 Seite 899

Cutting thin sheet up to approx. 3 mm wall thickness and sandwich material: see item 10 7400 page 897

Cutting stainless steel up to approx. 4 mm: see item 10 7300 page 896

Cutting of aluminum profiles/sheets: see item 10 8000 page 902 / item 11 1100 page 911 / item 11 1120 page 913

Cutting of wood, plastics, non-ferrous metals like aluminum, mild steels: see item 10 8055 page 899

✓ OPTIMAL · OPTIMAL ✓ GUT · GOOD ✓ MÖGLICH · POSSIBLE

| | | | |
|---|--|--|--|
| ✓ | | Baustahl | Mild steel |
| ✓ | | Ne-Metall wie Alu, Messing, Kupfer | Non ferrous materials like alu, copper, brass |
| ✓ | | Dünnschicht, Sandwichmaterial, Verbundstoffe | Thin iron sheets, sandwich material, composites |
| ✓ | | Kunststoffe, Plexiglas, Duro- und Thermoplaste | Plastics, plexiglass, acrylics, duro- and thermoplastics |

ANWENDUNG · APPLICATION

Schwerpunkt ist das Trennen von Profilmaterial sowie Bleche bis ca. 6 mm Wandstärke. Die höhere Zähnezahl ist bis ca. 3 mm Wandstärke geeignet. Für noch höhere Standzeiten siehe unsere neuen **Super Dry-Cutter Baustähle** Blätter. (Art. 10 7150 / Seite 894).

Sie suchen ein besondere gutes Preis-Leistungsverhältniss dieser Blätter? Sie haben einen hohen Verbrauch an Blättern und wollen / können die Blätter nicht nachschleifen? Dann ist unsere **BESTSELLER** Reihe das richtige für Sie. Siehe nächste Seite.

The focus is on cutting profile material and sheet metals up to 6 mm wall thickness. The higher number of teeth is suitable up to 3 mm thickness. For higher service lives see our new **Super Dry-Cutter mild steel** blades. (Art. 10 7150 / page 894).

Are you looking for a special price-performance ratio for this blades? You have a high consumption of this blades and do not want or cannot regrind them? Then our **BESTSELLER** series is right for you. See next page.

MASCHINE · MACHINE

Für Handkreissägen, Tauchsägen, Kapp- und Gehrungssägen, Radialarmsägen, Tisch- und Formatkreissägen, akkubetriebene Maschinen und passend ebenfalls für sogenannte DRY-CUTTER Maschinen mit reduzierten Drehzahlen wie zum Beispiel: JEPSON, RIDGID, ELU, RYOBI...

For portable machines, cross-cut saws, panel and sizing saws, mitre saws, table and radial arms saws, battery-driven saws and suitable also for so-called DRY CUTTER machines with reduced speeds such as: Jepson, RIDGID, ELU, RYOBI...

Bei Stahl ist es vorteilhaft mit reduzierten Drehzahlen (min⁻¹) zu arbeiten (siehe Tabelle unten). Die Verwendung von Schneidspray oder Mecutwachs erhöht wesentlich die Standzeit (Schneidöle siehe ab Seite 1144).

For steel, it is beneficial to work at reduced speeds (see table below). Use of cutting spray or Mecut wax increases the service life (coolants see from page 1144)

- Ø 136-150 mm = 4000-3600 min⁻¹/rpm
- Ø 160-200 mm = 3500-3000 min⁻¹/rpm
- Ø 210-250 mm = 2800-1900 min⁻¹/rpm
- Ø 260-330 mm = 1800-1500 min⁻¹/rpm
- Ø 350-400 mm = 1400-1000 min⁻¹/rpm

Bitte achten Sie unbedingt auf absolut feste und vibrationsfreie Befestigung des Werkstücks. Nichtbeachtung führt zu Zahnbruch/erhöhtem Verschleiß. Empfehlungen hierzu siehe Seite 895.

Please pay attention to absolutely stable/complete and vibration-free clamping of the work piece. Failure to observe leads to tooth breakage/increased wear. Recommendations can be found on page 895.

Trennen von Dünnschicht bis ca. 3 mm Wandstärke sowie Sandwichmaterial siehe Art. 10 7400 Seite 897

Cutting thin sheet up to approx. 3 mm wall thickness and sandwich material: see item 10 7400 page 897

Trennen von Edelstahl bis ca. 4 mm siehe Art. 10 7300 Seite 896

Cutting stainless steel up to approx. 4 mm: see item 10 7300 page 896

Trennen von Aluprofilen/Alublechen siehe Art. 10 8000 Seite 902 / Art. 11 1100 Seite 911 / Art. 11 1120 Seite 913

Cutting of aluminum profiles/sheets: see item 10 8000 page 902 / item 11 1100 page 911 / item 11 1120 page 913

Trennen von Holz, Kunststoffen, NE-Metallen wie Alu, Baustähle siehe Art. 10 8055 Seite 899

Cutting of wood, plastics, non-ferrous metals like aluminum, mild steels: see item 10 8055 page 899

| ✓ | | Ne-Metall wie Alu, Messing, Kupfer | Non ferrous materials like alu, copper, brass |
| ✓ | | Dünnschicht, Sandwichmaterial, Verbundstoffe | Thin iron sheets, sandwich material, composites |
| ✓ | | Kunststoffe, Plexiglas, Duro- und Thermoplaste | Plastics, plexiglass, acrylics, duro- and thermoplastics |

ANWENDUNG · APPLICATION

Schwerpunkt ist das Trennen von Profilmaterial sowie Bleche bis ca. 6 mm Wandstärke. Die höhere Zähnezahl ist bis ca. 3 mm Wandstärke geeignet. Für noch höhere Standzeiten.

Blätter der DRY-CUTTER Serien werden oftmals stark beansprucht. Durch Zahnbruch oder zu starker Abstumpfung ist ein Nachschärfen oftmals nicht mehr möglich. Hier ist unsere BESTSELLER Serie eine Alternative als „EINWEGKREISSÄGEBLÄTTER“.

The focus is on cutting profile material and sheet metals up to 6 mm wall thickness. The higher number of teeth is suitable up to 3 mm thickness. For higher service lives.

Blades of the DRY-CUTTER series are often heavily used. A re-sharpening is due to tooth breakage or excessive blunting often no longer possible. Here is our BESTSELLER series an alternative as "THROW-AWAY" blades

| ✓ |  | Baustahl | Mild steel |
|---|---|----------|------------|

ANWENDUNG · APPLICATION

Schwerpunkt ist das Trennen von Profilmaterial sowie Blechen. Profilmaterial Wandstärke ab 3 mm bis 8 mm sowie Bleche ab 3 mm bis 10 mm. Hierfür verwenden Sie bitte die Abmessungen 305 mm mit 60 Zähnen, 355 mm mit 80 Zähnen.

Bei den restlichen Abmessungen empfehlen wir Profilmaterial ab 2 mm bis 6 mm Wandstärke, sowie Bleche ab 2 mm bis 8 mm.

Durch **CERMET**-Zähne (Keramik) **verdoppelt sich die Standzeit** gegenüber der DRY-CUTTER BAUSTÄHLE, Ausführung Art. 10 7100 Seite 892.

Speziell bei **CERMET** ist auf absolut feste und vibrationsfreie Befestigung des Werkstückes zu achten. Dies ist ebenfalls wichtig für alle unsere DRY-CUTTER Modelle Art. 10 7100, 10 7130, 10 7300, 10 7400. Siehe hierzu auch nächste Seite „Empfehlungen zum spannen verschiedener Profile.“

The focus is on cutting profile material and sheet metal. Profile material from 3 mm up to 8 mm wall thickness and sheet metal from 3 mm up to 10 mm thickness. Please use here the dimension 305 mm with 60 teeth and 355 mm with 80 teeth.

For all the remaining dimension we recommend: Profile material from 2 mm up to 6 mm wall thickness and sheet metal from 2 mm up to 8 mm thickness.

CERMET teeth (ceramics) approx. **doubles the service life** as compared to our Dry-Cutter mild steel Art. 10 7100 page 892.

CERMET blades needs stable, complete and vibration-free clamping of the work piece. This is also important for all DRY-CUTTER versions such as Article 10 7100, 10 7130, 10 7300 and 10 7400.

See here our recommendation next page "Tips for cutting different shapes".

Film Movie

Empfehlung zum Trennen von Profilen in verschiedenen Formen für alle Dry-Cutter Sägeblätter
Recommendations for cutting different shapes for all Dry-Cutter saw blades

10 7100 10 7130 10 7150
10 7300 10 7400

Dünne Profile welche nur unzureichend befestigt/eingespannt sind fangen an zu vibrieren. Der Schnitt wird unsauber und ungenau. Die Standzeit des Blattes wird wesentlich verringert. Das Blatt kann sogar komplett zerstört werden. Abstützmaterial kann helfen diese Risiken zu vermeiden.

Thin materials and incomplete clamping can cause vibration and deflection which shortens the blade life at a tremendous level. Use of supportive material can reduce these risks.

Dünne Rohre · Thin pipes

Nur leicht befestigt/gespannt um das Material nicht zu verbiegen
Clamped lightly so material is not squeezed

Material vibriert während dem sägen
Material vibrates during cutting

Stabilisiert mit Abstützmaterial
Stabilized with supportive material

Abstützmaterial reduziert das Risiko das Blatt zu beschädigen.
Having supportive material can reduce the risk of damaging the blade.

Rundes Vollmaterial oder Rohre · Round bars or pipes

Rundes Vollmaterial oder Rohre können sich während des Sägevorgangs drehen, obwohl sie korrekt befestigt/eingespannt sind. Dies kann kontrolliert werden indem eine Markierung auf das Material angebracht wird. Dreht sich das Material, wird die Standzeit des Blattes erheblich reduziert oder das Blatt kann komplett zerstört werden. Bitte mit Abstützmaterial arbeiten.

Round bars or pipes can move during cutting, even with correct clamping. This can be checked by a "marking" onto the material. If the material is moving, the blade is likely to be damaged.

Dünne Profile eine Seite offen · Thin open ended materials

Keine stabile Befestigung
Unstable clamping

Die mit Pfeilen markierte Stellen fangen an zu vibrieren
The parts below the arrow will vibrate during cutting

Stabilisiert mit 2 Teilen Abstützmaterial
Stabilized with 2 supportive materials

Winkelleisten · Angle bar

Schenkel nach unten legen und von der Winkelseite anfangen zu sägen.
The material is face down and the cutting starts from the angle side.

Blatteintrittswinkel · Blade entrance

Sägen auf dem flachen Teil
Entering from flat surface

Sägebeginn von der Ecke
Entering from the corner
Abstützmaterial
Supportive material

Der Eintrittswinkel des Blattes hat ebenfalls einen starken Einfluss auf die Standzeit. Das Werkstück sowie das Blatt sollten so eingestellt sein, dass der erste Schnitt des Blattes an dem kleinsten Kontaktpunkt des Werkstückes beginnt.
The blade entrance point effects the blade life. The material and blade should be set to consider the best contact point.

MASCHINE · MACHINE

Für Handkreissägen, Tauchsägen, Kapp- und Gehrungssägen, Radialarmsägen, Tisch- und Formatkreissägen, akkubetriebene Maschinen und passend ebenfalls für sogenannte DRY-CUTTER Maschinen mit reduzierten Drehzahlen wie zum Beispiel: JEPSON, RIDGID, ELU, RYOBI...

For portable machines, cross-cut saws, panel and sizing saws, mitre saws, table and radial arms saws, battery-driven saws and suitable also for so-called DRY CUTTER machines with reduced speeds such as: JEPSON, RIDGID, ELU, RYOBI...

- Ø 136-150 mm = 4000-3600 min⁻¹/rpm
- Ø 160-200 mm = 3500-3000 min⁻¹/rpm
- Ø 210-250 mm = 2800-1900 min⁻¹/rpm
- Ø 260-330 mm = 1800-1500 min⁻¹/rpm
- Ø 350-400 mm = 1400-1000 min⁻¹/rpm
- Ø 420-500 mm = 900-700 min⁻¹/rpm

Bei Stahl ist es vorteilhaft mit reduzierten Drehzahlen (min⁻¹) zu arbeiten (siehe Tabelle oben). Die Verwendung von Schneidspray oder Mecutwachs erhöht wesentlich die Standzeit (Schneidöle siehe ab Seite 1144).

Bitte achten Sie unbedingt auf absolut feste und vibrationsfreie Befestigung des Werkstücks. Nichtbeachtung führt zu Zahnbruch/erhöhtem Verschleiß. Empfehlungen hierzu siehe Seite 895.

For steel, it is beneficial to work at reduced speeds (see table above). Use of cutting spray or Mecut wax increases the service life (coolants see from page 1144).

Please pay attention to absolutely stable/complete and vibration-free clamping of the work piece. Failure to observe leads to tooth breakage/increased wear. Recommendations can be found on page 895.

MASCHINE · MACHINE

Für Handkreissägen, Tauchsägen, Kapp- und Gehrungssägen, Radial-armsägen, Tisch- und Formatkreissägen, akkubetriebene Maschinen und passend ebenfalls für sogenannte DRY-CUTTER Maschinen mit reduzierten Drehzahlen wie zum Beispiel: JEPSON, RIDGID, ELU, RYOBI...

For portable machines, cross-cut saws, panel and sizing saws, mitre saws, table and radial arms saws, battery-driven saws and suitable also for so-called DRY CUTTER machines with reduced speeds such as: JEPSON, RIDGID, ELU, RYOBI...

- Ø 136-150 mm = 4000-3600 min⁻¹ /rpm
- Ø 160-200 mm = 3500-3000 min⁻¹ /rpm
- Ø 210-250 mm = 2800-1900 min⁻¹ /rpm
- Ø 260-330 mm = 1800-1500 min⁻¹ /rpm
- Ø 350-400 mm = 1400-1000 min⁻¹ /rpm
- Ø 420-500 mm = 900-700 min⁻¹ /rpm

Bei Stahl ist es vorteilhaft mit reduzierten Drehzahlen (min⁻¹) zu arbeiten (siehe Tabelle oben). Die Verwendung von Schneidspray oder Mecutwachs erhöht wesentlich die Standzeit (Schneidöle siehe ab Seite 1144).

Bitte achten Sie unbedingt auf absolut feste und vibrationsfreie Befestigung des Werkstücks. Nichtbeachtung führt zu Zahnbruch/erhöhtem Verschleiß. Empfehlungen hierzu siehe Seite 895.

For steel, it is beneficial to work at reduced speeds (see table above). Use of cutting spray or Mecut wax increases the service life (coolants see from page 1144).

Please pay attention to absolutely stable/complete and vibration-free clamping of the work piece. Failure to observe leads to tooth breakage/increased wear. Recommendations can be found on page 895.

| ✓ | | Dünnscheibe, Sandwichmaterial, Verbundstoffe | Thin iron sheets, sandwich material, composites |
| ✓ | | Baustahl | Mild steel |
| ✓ | | Ne-Metall wie Alu, Messing, Kupfer | Non ferrous materials like alu, copper, brass |
| ✓ | | Kunststoffe, Plexiglas, Duro- und Thermoplaste | Plastics, plexiglass, acrylics, duro- and thermoplastics |

ANWENDUNG · APPLICATION

Schwerpunkt ist das Trennen von dünnwandigen Blechen/Profilen aus Baustahl bis zu 3 mm Wandstärke. Hervorragend für Sandwichmaterialien mit dünnen Deckschichten aus Stahl/Alu/Kunststoffen von ca. 0,2-1 mm.

Weiterhin gut geeignet zum Trennen von Blechen/Profilen aus Ne-Metallen (Alu, Kupfer, Messing) und Kunststoffen bis ca. 5 mm Wandstärke.

Bitte achten Sie unbedingt auf absolut feste und vibrationsfreie Befestigung des Werkstücks. Nichtbeachtung führt zu Zahnbruch/erhöhtem Verschleiß. Empfehlungen hierzu siehe Seite 895.

Focus is on the cutting thin-walled sheet metal/steel profiles up to 3 mm wall thickness. Great for sandwich materials with thin layers of steel/aluminum/plastics of about 0.2-1 mm.

Also highly suitable for cutting sheets/profiles from non-ferrous metals (Aluminum, copper, brass) and plastics up to 5 mm wall thickness.

Please pay attention to absolutely stable/complete and vibration-free clamping of the work piece. Failure to observe leads to tooth breakage/increased wear. Recommendations can be found on page 895.

Blätter 120 mm passen für Winkelschleifer 115 + 125 mm.

Blade diameter 120 mm suitable for angle grinder diameter 115-125 mm.

Verwendung in Europa nur erlaubt mit Schutzhaube (wird komplett mit Spindelmutter, Stirnlochschlüssel, Absaugstutzen und Bedienungsanleitung geliefert).

Use in Europe only permitted with protection cover (delivered completely with spindle nut, open-faced spanner, exhaust socket and operating instructions).

ANWENDUNG · APPLICATION

Brutal Einweg-Sägeblätter zum Sägen „fast“ aller Materialien. Ideal für Bau und Handwerk. Durch geringe Schnittbreite wenig Schnittverlust sowie Schnittwiderstand. Daher auch ideal für Akku-Maschinen.

Niedrigste Zähnezahl: Zum schnellen Trennen aller Arten von Hölzern (auch mit Nägeln, Klammern), Kunststoffen, NE-Metallen. Grober Schnitt.

Mittlere Zähnezahl: Zum Trennen aller angegebenen Materialien. Mittlere Schnittgüte (Zum Trennen von Baustählen, NE-Metalle empfehlen wir die höchste Zähnezahl).

Höchste Zähnezahl: Zum Trennen aller angegebenen Materialien. Vorzugsweise für alle Metalle, wie Baustähle, Alu und andere NE-Metalle.

Brutal disposable saw blades for sawing "almost" any material. Ideal for construction and crafts. The low cutting width leads to little cutting wastage and cutting resistance. Therefore also ideal for battery-powered machines.

Lowest tooth number: For fast cutting of all kinds of woods (also with nails, clamps, plastics, non-ferrous metals). Coarse cut.

Medium tooth number: For cutting of all specified materials. Medium cutting quality (for cutting of mild steels, non-ferrous metals, we recommend the highest number of teeth).

Highest tooth number: For cutting of all specified materials. Preferably for all metals like mild steels, aluminum and other non-ferrous metals.

Schnittgeschwindigkeit in m/s · Cutting speed in m/s

① NE-Metalle
Non ferrous metals

② Sicherheitsgrenze
Safety limits

Festlegung der Schnittgeschwindigkeit Vc
Determination of cutting speed Vc

$$Vc (m/s) = \frac{D \cdot \pi \cdot n}{60 \cdot 1000}$$

Festlegung der Vorschubgeschwindigkeit Vf
Determination of feed rate Vf

$$Vf (m/min) = \frac{fz \cdot n \cdot Z}{1000}$$

Festlegung der Drehzahl n
Determination of revolution speed n

$$n (min^{-1}) = \frac{Vc \cdot 1000 \cdot 60}{D \cdot \pi}$$

Vc (m/s) = Schnittgeschwindigkeit · Cutting speed

Vf (m/min) = Vorschubgeschwindigkeit · Feed rate

fz (mm/z) = Vorschub pro Zahn · Feed per tooth

D (mm) = Sägendurchmesser · Saw blade diameter

n (min⁻¹) = Drehzahl · rpm

Z = Anzahl der Zähne · Number of teeth

Aluminium · Kupfer · Messing · Bronze

Aluminum · Copper · Brass · Bronze

| ✓ | | Gasbetonsteine | Autoclaved aerated concrete blocks |

ANWENDUNG · APPLICATION

Das ideale Blatt für den Ladenbau, Messebau, Renovierungsarbeiten. Für eine Vielzahl von Materialien wie: Ne-Metalle, Kunststoffe, Plexiglas, Spanplatten, Thermofassadenplatten.

Weitere Alu-Negativ Blätter siehe Art. 11 1100 Seite 911, Art. 11 1120 Seite 913 sowie Art. 11 1130 Seite 915.

The ideal blade for shop construction, trade fair construction, renovation work. For many materials such as: non-ferrous metals, plastics, plexiglas, chipboard, thermo façade plates.

Other aluminum negative sheets: see item 11 1100 page 911, item 11 1120 page 913, and item 11 1130 page 915.

ANWENDUNG · APPLICATION

Plattenaufteilung und Kappschnitte in Profile, Platten, Blöcke, Stangen aus NE-Metalle wie Aluminium, Messing, Kupfer sowie Kunststoffe (z.B. Fensterprofile).

Durch positiven Schnittwinkel vorzugsweise für automatischen Vorschub und dickere Wandstärken. (Auch manueller Vorschub möglich)

Sie wünschen:
Höhere Schnittwerte?
Weniger Verschleiß?
Weniger Verschleiß/Energieverbrauch der Maschine?
Bei Handgeführten Maschinen sowie manuellem Vorschub wesentlich weniger Kraftaufwand?
Siehe Aluminium Positiv Dünnschnitt. Artikel 11 1050 Seite 907.

Spezialausführungen für eloxiertes oder lackiertes Aluminium auf Anfrage.

Sizing and cross cutting profiles, plates, blocks and rods made of aluminum, brass, copper and plastics (e.g. window profiles).

Due to positive cutting angle preferably for automatic feed and thicker walls. (Manual feed is also possible)

You want:
Higher cutting values?
Less waste?
Less wear/energy consumption of the machine?
With hand-held machines and manual feed much less effort?
See aluminum positive thin-cut. Type 11 1050 page 907.

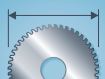

Special design for anodized or lacquered aluminum on request.

ANWENDUNG · APPLICATION

Plattenaufteilung und Kappschnitte in Profile, Platten, Blöcke, Stangen aus NE-Metalle wie Aluminium, Messing, Kupfer sowie Kunststoffe.

Durch dünne Schnittbreite:

- Höhere Schnittwerte
- Weniger Verschnitt
- Weniger Verschleiß/Energieverbrauch der Maschine
- Bei Handgeführten Maschinen sowie manuellem Vorschub wesentlich weniger Kraftaufwand

Durch positiven Schnittwinkel vorzugsweise für automatischen Vorschub. (Auch manueller Vorschub möglich)

Sie wünschen:

- Nahezu gratfreie Fertigschnittqualität auch an der Unterseite (Austritt) des Werkstücks?
- Hervorragende Schnittgüte an den Schnittflächen (nahezu Spiegelfinish)?
- Noch bessere Standzeiten?

Siehe Aluminium Positiv Dünnschnitt-Fertigschnitt. Artikel 11 1430 Seite 908

Spezialausführungen für eloxiertes oder lackiertes Aluminium auf Anfrage.

Sizing and cross cuts profiles, plates, blocks and rods made of aluminum, brass, copper and plastics.

Due to thin cutting width:

- Higher cutting values
- Less waste
- Less wear/energy consumption of the machine
- With hand-held machines and manual feed much less effort

Due to positive cutting angle preferably for automatic feed. (Manual feed is also possible)

You want:

- Almost burr-free finishing-cut quality also at the lower side/exit of the workpiece?
- Excellent cutting quality at the cut surface (almost mirror finish)?
- Even better lifetime?

See aluminum positive thin-cut/finishing cut. Type 11 1430 page 908

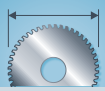

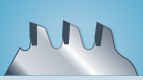

Special design for anodized or lacquered aluminum on request.

ANWENDUNG · APPLICATION

Plattenaufteilung und Kappschnitte in Profile, Platten, Blöcke, Stangen aus NE-Metalle wie Aluminium, Messing, Kupfer sowie Kunststoffe.

Durch TFF-P Verzahnung:

- Nahezu gratfreie Fertigschnittqualität auch an der Unterseite (Austritt) des Werkstücks
- Hervorragende Schnittgüte an den Schnittflächen (nahezu Spiegelfinish)
- Noch bessere Standzeiten

Durch dünne Schnittbreite:

- Weniger Verschnitt
- Weniger Verschleiß/Energieverbrauch der Maschine
- Bei Handgeführten Maschinen sowie manuellem Vorschub wesentlich weniger Kraftaufwand

Durch positiven Schnittwinkel vorzugsweise für automatischen Vorschub. (Auch manueller Vorschub möglich)

Spezialausführungen für eloxiertes oder lackiertes Aluminium auf Anfrage.

Sizing and cross cuts profiles, plates, blocks and rods made of aluminum, brass, copper and plastics.

Because of TFF-P cut:

- Almost burr-free finishing-cut quality also at the lower side/exit of the workpiece
- Excellent cutting quality at the cut surface (almost mirror finish)
- Even better lifetime

Due to thin cutting width:

- Less waste
- Less wear/energy consumption of the machine
- With hand-held machines and manual feed much less effort

Due to positive cutting angle preferably for automatic feed. (Manual feed is also possible)

Special design for anodized or lacquered aluminum on request.

Aluminium Negativ
Aluminum negative

✓ OPTIMAL · OPTIMAL ✓ GUT · GOOD ✓ MÖGLICH · POSSIBLE

| | | | |
|---|--|--|--|
| ✓ | | Ne-Metall wie Alu, Messing, Kupfer | Non ferrous materials like alu, copper, brass |
| ✓ | | Kunststoffe, Plexiglas, Duro- und Thermoplaste | Plastics, plexiglass, acrylics, duro- and thermoplastics |

ANWENDUNG · APPLICATION

Plattenaufteilung und Kappschnitte in dünnwandiges Profil und Vollmaterial aus NE-Metalle wie Aluminium, Kupfer, Messing sowie Kunststoffe (z.B. Fensterprofile).

Minimalmengenschmierung empfohlen.

Durch negativen Spanwinkel vorzugsweise manueller Vorschub.

Automatischer Vorschub ebenfalls möglich.

Sie wünschen:

- Höhere Schnittwerte?
- Weniger Verschnitt?
- Weniger Verschleiß/Energieverbrauch der Maschine?
- Bei Handgeführten Maschinen sowie manuellem Vorschub wesentlich weniger Kraftaufwand?

Siehe Aluminium Negativ Dünnschnitt. Artikel 11 1120 Seite 912

Spezialausführungen für eloxiertes oder lackiertes Aluminium auf Anfrage.

Sizing and cross cuts in thin-walled profiles, plates, blocks and rods made of aluminum, brass, copper and plastics (e.g. window profiles).

Minimum Lubrication recommended.

Because of negative hook angle preferably for manual feed.

Automatic feed also possible.

You want:

- Higher cutting values?
- Less waste?
- Less wear/energy consumption of the machine?
- With hand-held machines and manual feed much less effort?

See aluminum negative thin-cut. Article 11 1120 page 912

Special design for anodized or lacquered aluminum on request.

> Trapez-Flachzahn Negativ
> Triple-chip / flat tooth negative

| ✓ | | Ne-Metall wie Alu, Messing, Kupfer | Non ferrous materials like alu, copper, brass |
| ✓ | | Kunststoffe, Plexiglas, Duro- und Thermoplaste | Plastics, plexiglass, acrylics, duro- and thermoplastics |

ANWENDUNG · APPLICATION

Plattenaufteilung und Kappschnitte in dünnwandige Profile und Vollmaterial aus NE-Metallen wie Aluminium, Kupfer, Messing sowie Kunststoffe (z.B. Fensterprofile).

Minimalmengenschmierung empfohlen.

Durch dünne Schnittbreite:

- Höhere Schnittwerte
- Weniger Verschnitt
- Weniger Verschleiß/Energieverbrauch der Maschine
- Bei Handgeführten Maschinen sowie manuellem Vorschub wesentlich weniger Kraftaufwand

Durch negativen Spanwinkel vorzugsweise manueller Vorschub. Automatischer Vorschub ebenfalls möglich.

Sie wünschen:

- Nahezu gratfreie Fertigschnittqualität auch an der Unterseite (Austritt) des Werkstücks?
- Hervorragende Schnittgüte an den Schnittflächen (nahezu Spiegelfinish)?
- Noch bessere Standzeiten
- Siehe Aluminium Negativ Dünnschnitt-Fertigschnitt. Artikel 11 1130 Seite 914

Spezialausführungen für eloxiertes oder lackiertes Aluminium auf Anfrage.

Sizing and cross cuts in thin-walled profiles, plates, blocks and rods made of aluminum, brass, copper and plastics (e.g. window profiles).

Minimum Lubrication recommended.

Due to thin cutting width:

- Higher cutting values
- Less waste
- Less wear/energy consumption of the machine
- With hand-held machines and manual feed much less effort

Due to negative cutting angle preferably for manual feed. Automatic feed also possible.

You want:

- Almost burr-free finishing-cut quality also at the lower side/exit of the workpiece?
- Excellent cutting quality at the cut surface (almost mirror finish)?
- Even better lifetime?
- See aluminum negative thin-cut/finishing-cut. Article 11 1130 page 914

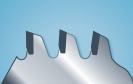

Special design for anodized or lacquered aluminum on request.

UNI 1 = 2-7-42 + 2-9-46,40 UNI 2 = 2-10-60 + 2-11-63 + 2-12-64

Sie wünschen:

- Nahezu gratfreie Fertigschnittqualität auch an der Unterseite (Austritt) des Werkstücks?
- Hervorragende Schnittgüte an den Schnittflächen (nahezu Spiegelfinish)?
- Noch bessere Standzeiten
- Siehe Aluminium Negativ Dünnschnitt-Fertigschnitt. Artikel 11 1130 Seite 914

You want:

- Almost burr-free finishing-cut quality also at the lower side/exit of the workpiece?
- Excellent cutting quality at the cut surface (almost mirror finish)?
- Even better lifetime?
- See aluminum negative thin-cut/finishing-cut. Article 11 1130 page 914

Aluminium Negativ Dünnschnitt/Fertigschnitt
Aluminum negative thin-cut/finishing-cut

> Trapez Flach Fase Negativ
> Triple-chip/flat tooth negative

MASCHINE · MACHINE

Abläng- und Kappsägen, Tisch- und Formatkreissägen, Gehrungs- und Doppelgehrungssägen, Kappkreissägen, CNC-Bearbeitungszentren, Radialarmsägen, Handkreissägen, Tauchsägen, Akkubetriebene Sägemaschinen

Mitre and double mitre saws, table and sizing saws, cross-cut saws, CNC machining centers, portable circular saws, battery-driven saws

✓ OPTIMAL · OPTIMAL ✓ GUT · GOOD ✓ MÖGLICH · POSSIBLE

| | | | |
|---|--|--|--|
| ✓ | | Ne-Metall wie Alu, Messing, Kupfer | Non ferrous materials like alu, copper, brass |
| ✓ | | Kunststoffe, Plexiglas, Duro- und Thermoplaste | Plastics, plexiglass, acrylics, duro- and thermoplastics |

ANWENDUNG · APPLICATION

Plattenaufteilung und Kappschnitte in dünnwandige Profile und Vollmaterial aus NE-Metallen wie Aluminium, Kupfer, Messing sowie Kunststoffe (z.B. Fensterprofile).

Minimalmengenschmierung empfohlen.

Durch TFF-N Verzahnung:

- Nahezu gratfreie Fertigschnittqualität auch an der Unterseite (Austritt) des Werkstücks
- Hervorragende Schnittgüte an den Schnittflächen (nahezu Spiegelfinish)
- Noch bessere Standzeiten

Durch dünne Schnittbreite:

- Weniger Verschnitt
- Weniger Verschleiß/Energieverbrauch der Maschine
- Bei Handgeführten Maschinen sowie manuellem Vorschub wesentlich weniger Kraftaufwand

Durch negativen Spanwinkel vorzugsweise manueller Vorschub. Automatischer Vorschub ebenfalls möglich.

Spezialausführungen für eloxiertes oder lackiertes Aluminium auf Anfrage.

Sizing and cross cuts in thin-walled profiles, plates, blocks and rods made of aluminum, brass, copper and plastics (e.g. window profiles).

Minimum Lubrication recommended.

Because of TFF-N cut:

- Almost burr-free finishing-cut quality also at the lower side/exit of the workpiece
- Excellent cutting quality at the cut surface (almost mirror finish)
- Even better lifetime

Due to thin cutting width:

- Less waste
- Less wear/energy consumption of the machine
- With hand-held machines and manual feed much less effort

Due to negative cutting angle preferably for manual feed. Automatic feed also possible.

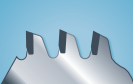

Special design for anodized or lacquered aluminum on request.

Schnittgeschwindigkeit in m/s · Cutting speed in m/s

1 Kunststoffe
Plastics

2 Sicherheitsgrenze
Safety limits

Festlegung der Schnittgeschwindigkeit Vc
Determination of cutting speed Vc

$$Vc (m/s) = \frac{D \cdot \pi \cdot n}{60 \cdot 1000}$$

Festlegung der Vorschubgeschwindigkeit Vf
Determination of feed rate Vf

$$Vf (m/min) = \frac{fz \cdot n \cdot Z}{1000}$$

Festlegung der Drehzahl n
Determination of revolution speed n

$$n (min^{-1}) = \frac{Vc \cdot 1000 \cdot 60}{D \cdot \pi}$$

Vc (m/s) = Schnittgeschwindigkeit · Cutting speed

Vf (m/min) = Vorschubgeschwindigkeit · Feed rate

fz (mm/z) = Vorschub pro Zahn · Feed per tooth

D (mm) = Sägendurchmesser · Saw blade diameter

n (min⁻¹) = Drehzahl · rpm

Z = Anzahl der Zähne · Number of teeth

| 11 1450 Ø mm 210-600  | Kapp- und Gehrungs-Kreissägeblätter · Wechselzahn/negativ Chop- and mitre circular saws · alternate top bevel tooth/negative | Spezialprogramm für Kapp- und Gehrungssägen. Hohe Zähnezahl hervorragend für nahezu alle Kunststoffe und Plattenwerkstoffe/Profile furniert oder beschichtet. Special selection for chop- and mitre saws. High number of teeth excellent for almost all kind of plastics and veneered/coated boards/ profiles. | 945 |
| | | | |
| 11 1460 Ø mm 250-400  | Formatieren · Fertigschnitt · Harte Kunststoffe · Abrasive Werkstoffe Panel-sizing · Finishing cut · Hard plastics · Abrasive Materials | Zum Formatieren von Platten/Profilen in verschiedenen Dicken aus Thermoplaste wie PVC, PE, PA, ABS usw. Ebenfalls ideal bei Duroplasten und Mineralwerkstoffe wie HPL (Trespa, Resopal), Corian, Noblan und Abrasive Werkstoffe wie GFK, CFK For sizing panels/profiles of thermoplastics in various thicknesses made of: PVC, PE, PA, ABS ... Also ideal for duroplastics and mineral materials such as HPL (Trespa, Resopal) Corian, Noblan and abrasive materials such as GFK, CFK. | 947 |
| | | | |
| 11 1470 Ø mm 220-400  | Formatieren · Fertigschnitt · Trapez/ Flachzahn Panel-sizing · Finishing cut · Triple chip/flat tooth | Zum Formatieren von Platten/Profilen in verschiedenen Dicken. Für nahezu alle Kunststoffe (Duroplasten und Thermoplasten) geeignet. Ideal auch bei beidseitig mit Kunststoff beschichtete Platten. For sizing panels/profiles in various thicknesses. For almost all kinds of plastics (duro- and thermoplastics). Ideal also for double-side plastic coated boards. | 949 |

| ✓ | | Kunststoffe, Plexiglas, Duro- und Thermoplaste | Plastics, plexiglass, acrylics, duro- and thermoplastics |
| ✓ | | Ne-Metall wie Alu, Messing, Kupfer | Non ferrous materials like alu, copper, brass |
| ✓ | | Dünnscheibe, Sandwichmaterial, Verbundstoffe | Thin iron sheets, sandwich material, composites |
| ✓ | | Weichholz, Hartholz, Exotenzholz, Quer | Soft wood, hard wood, and exotic wood across the grain |
| ✓ | | Holz mit Einschlüssen wie Nägel, Klammern, Beton- und Mörtelreste | Wood with inclusions like nails, clips, concrete residues |
| ✓ | | Gips-Zement-Steinwollplatten, Eternit, GFK, CFK, HPL, Mineralwerkstoffe | Gypsum/Cement fibre boards, Rockwool, Eternit, GRP, CFK, HPL, Mineral material |
| ✓ | | Gasbetonsteine | Autoclaved aerated concrete blocks |

ANWENDUNG · APPLICATION

Das ideale Blatt für den Ladenbau, Messebau, Renovierungsarbeiten. Für eine Vielzahl von Materialien wie: Ne-Metalle, Kunststoffe, Plexiglas, Spanplatten, Thermofassadenplatten.

Weitere Alu-Negativ Blätter siehe Art. 11 1100 Seite 929, Art. 11 1120 Seite 931 sowie Art. 11 1130 Seite 915.

The ideal blade for shop construction, trade fair construction, renovation work. For many materials such as: non-ferrous metals, plastics, plexiglas, chipboard, thermo façade plates.

Other aluminum negative sheets: see item 11 1100 page 929, item 11 1120 page 931, and item 11 1130 page 915.

ANWENDUNG · APPLICATION

Für Fertigschnitte, Klarschnitt in homogene Werkstoffe, Thermoplaste wie Acrylglas (Plexiglas) PC, PMMA.

Wenigzahn Ausführung (TTP): Thermoplast im Paketschnitt. Zugfestigkeit > 50 N/mm².

Vielzahn Ausführung (WZF): Thermoplast dünnwandig. Zugfestigkeit max. 50 N/mm².

Empfehlung: Kühlung mit Emulsion, siehe ab Seite 1144.

For finishing cut, clear cut view in homogenous material, thermoplastics such as acrylic (plexiglass), PC, PMMA.

Low tooth number (TTP): Thermoplastics, for stacks of material. Tensile strength > 50 N/mm².

High tooth number (WZF): Thermoplastics, thin-walled. Tensile strength max. 50 N/mm².

Recommendation: Use emulsion as a coolant, see from page 1144.

ANWENDUNG · APPLICATION

Für Trenn- und Gehrungsschnitte in dick- bis dünnwandigen Platten und (je nach Zähnezahl) Hohlprofilen z.B. Fensterprofile aus PVC, auch Glasfaserverstärkt mit und ohne Gummidichtung. (Durch positiven Schnittwinkel vorzugsweise für automatischen Vorschub. Auch manueller Vorschub möglich).

Achswinkel-Blätter für nahezu gratfreie, sauberste Schnitte und höchste Standzeiten in Fensterprofilen aus PVC (auch glasfaserverstärkt-GFK)

SPEZIELL MIT GUMMIDICHTUNG siehe Art. 11 1320, Seite 935

For sizing cuts and mitre cuts in thin and thick-walled boards and (depending on the number of teeth) hollow profiles, e.g. window profiles made of PVC, also glass fibre reinforced (GRP) with and without rubber seal. (Positive hook angle preferably for automatic feed. Manual feed also possible).

Axial-Angle blades for virtually burr-free, cleanset cuts and longest service life in window profiles made of PVC (also glass fibre reinforced-GRP)

SPECIFICALLY WITH RUBBER SEAL see Art. 11 1320, Page 935

MASCHINE · MACHINE

Tisch- und Formatkreissägen, Doppelgehrungssägen, automatische Kappkreissägen, CNC-Bearbeitungszentren.

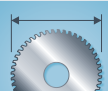

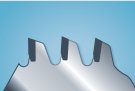

Table and sizing saws, double mitre saws, automatic cross-cut saws, CNC machining centers.

MASCHINE · MACHINE

Tisch- und Formatkreissägen, Doppelgehrungssägen, automatische Kappkreissägen, CNC-Bearbeitungszentren, akkubetriebene Sägemaschinen.

Table and sizing saws, double mitre saws, automatic cross-cut saws, CNC machining centers, battery-Driven saws.

ANWENDUNG · APPLICATION

Für Trenn- und Gehrungsschnitte in dünnwandigen Platten und Hohlprofilen z.B. Fensterprofile aus PVC, auch Glasfaserverstärkt mit und ohne Gummidichtung. (Durch positiven Schnittwinkel vorzugsweise für automatischen Vorschub. Auch manueller Vorschub möglich).

Durch dünne Schnittbreite wenig Kraftaufwand und Verschnitt. Daher ideal auch für akkubetriebenen Maschinen.

Achswinkel-Blätter für nahezu gratfreie, sauberste Schnitte und höchste Standzeiten in Fensterprofile aus PVC (auch glasfaserverstärkt-GFK)

SPEZIELL MIT GUMMIDICHTUNG siehe Art. 11 1320, Seite 935

For sizing cuts and mitre cuts in thin-walled boards and hollow profiles, e.g. window profiles made of PVC, also glass fibre reinforced (GRP) with and without rubber seal. (Positive hook angle preferably for automatic feed. Manual feed also possible).

Due to the small cutting width less cutting pressure and waste. Therefore ideal also for battery-powered machines.

Axial-Angle blades for virtually burr-free, cleanset cuts and longest service life in window profiles made of PVC (also glass fibre reinforced-GRP)

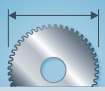

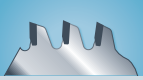

SPECIFICALLY WITH RUBBER SEAL see Art. 11 1320, Page 935

ANWENDUNG · APPLICATION

Für Trenn- und Gehrungsschnitte in dünnwandige Platten und Hohlprofile, z.B. Fensterprofile aus PVC, glasfaserverstärkt mit und ohne Gummidichtung. (Durch negativen Spanwinkel vorzugsweise für manuellen Vorschub. Auch automatischer Vorschub möglich).

Durch dünne Schnittbreite wenig Kraftaufwand und Verschnitt. Daher auch ideal für Akku-Maschinen.

Achswinkel-Blätter für nahezu gratfreie, sauberste Schnitte und höchste Standzeiten in Fensterprofile aus PVC (auch glasfaserverstärkt-GFK)

SPEZIELL MIT GUMMIDICHTUNG siehe Art 11 1320, Seite 935

For sizing cuts and mitre cuts in thin-walled boards and hollow profiles, e.g. window profiles made of PVC, also glass fibre reinforced (GRP) with and without rubber seal. (Negative hook angle preferably for manual feed. Automatic feed also possible).

Due to the small cutting width less cutting pressure and waste. Therefore ideal also for Battery-Powered machines.

Axial-Angle blades for virtually burr-free, cleanest cuts and longest service life in window profiles made of PVC (also glass fiber reinforced-GRP)

SPECIFICALLY WITH RUBBER SEAL see Art. 11 1320, Page 935

- > Trapez-Flachzahn Negativ Dünn
- > Triple-chip / flat tooth negative thin-cut

MASCHINE · MACHINE

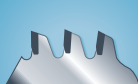

Kappkreissägen, Gehrungs- und Doppelgehrungssägen, CNC-Bearbeitungszentren, Radialarmsägen, Tisch- und Formatkreissägen, Abläng- und Kappsägen, Handkreissägen, Tauchsägen, akkubetriebene Maschinen.

Automatic cross-cut saws, Mitre and double mitre saws, CNC-machining centers, Table and sizing saws, Panel saws, Radial arm saws, Portable machines, Battery-driven saws.

Fensterprofile & Kunststoffe. Negativer Spanwinkel / Dünnschnitt
Window profiles & plastics. Negative hook angle / Thin-cut

| ✓ | | Dünne Profile aus Ne-Metall wie Alu, Messing, Kupfer | Thin profiles made of non ferrous materials like alu, copper, brass |

ANWENDUNG · APPLICATION

Durch spezielles Hartmetall/Zahnform ideal für Fertigschnitte in dünnen Platten und Profilmaterial aus harten Kunststoffen (Thermoplaste) wie: PVC, PE, PA, ABS, PS, POM PC, PMMA (Acrylglas). z.B. Hohlkammerplatten aus PMMA (Acrylglas).

Ebenfalls gut bei abrasiven, zu hohen Schneidenverschleiß führenden Materialien wie: GFK, CFK, Zementplatten, Gipsfaserplatten, Eternit.

Ebenfalls exzellent geeignet für Sandwichmaterialien mit dünnen Deckschichten. Maximale Deckschichtdicke Nicht-Eisen-Metalle / Kunststoffe = 1,0 mm
Maximale Deckschichtdicke Eisenblech = 0,3 mm
Hervorragend auch für dünne Profile bis 1 mm Wandstärke aus Nicht-Eisen-Metalle, wie Alu, Kupfer, Messing.

Durch dünne Schnittbreite wenig Kraftaufwand und Verschnitt. Daher auch ideal für Akku-Maschinen.

Due to special carbide / tooth geometry excellent for finishing cuts in thin plates and profiles made of hard plastics (thermoplastics) such as: PVC, PE, PA, ABS, PS, POM PC, PMMA e.g. hollow section boards of PMMA (acrylic glass).

Also good for abrasive, heavy machining and abrading materials such as: GFK, CFK, fibre cement panels, gypsum, fibre boards, eternit.

Also excellent for sandwich materials with thin layers. Maximum layer thickness for non-ferrous-metals / plastics = 1,0 mm
Maximum layer thickness iron sheet metal = 0,3 mm
Excellent also for thin profiles up to 1 mm thickness made of non-ferrous metal such as aluminum, copper, brass.

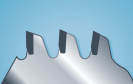

Due to thin cutting width little cutting pressure and waste of material. Therefore also ideal for cordless machines.

ANWENDUNG · APPLICATION

Für **hervorragende, ausrissfreie Schnittqualität** bei Trenn- und Gehrungsschnitten in dünnwandige Hohlprofile und Platten aus Kunststoff, z.B. Fensterprofile aus PVC (Polyvinylchlorid). Durch die aggressive Spezialgeometrie werden selbst die eingezogenen Gummidichtungen bei Fensterprofilen **ohne auszufransen** sauber durchtrennt.

Hervorragende und ausrissfreie Schnittqualität ebenfalls bei kunststoffummantelte oder furnierte Leisten und Türzagen, Folien aus PVC auf Rollen, bedruckte Dekorpaneele, Dekor Finish Folien, Holzwerkstoffe auch mit dicken Deckschichten, Massivholz quer. Auch gute Ergebnisse beim Sägen von Kunststoffen mit hohen Glasfaser-/Kohlefaseranteile (GFK/CFK)

Hervorragende Ergebnisse auch bei Fensterprofilen aus Faserverbundstoffe. Z.B. von Firma REHAU Geneo-Fenster aus RAU-RIBRO®

Excellent, splinter-free finishing-cut quality. For sizing and mitre cuts in thin-walled hollow profiles and boards of plastic, e.g. window profiles of PVC (Polyvinyl Chloride). Due to the aggressive cutting geometry even the rubber seals in window profiles will be **cut without fraying**.

Excellent and splinter-free finishing-cut quality also in plastic profiles/door frames veneered of foil-sheathed, sizing films on rolls of PVC, printed decorative (AC) paper, decor finish films, wooden based materials including material with very thick top layers and solid wood across the grain. Also good cutting results in glass fibre and carbon fibre reinforced plastics (GRP, CFK)

Excellent results in window profiles made of fiber composites. For example from company REHAU Geneo-windows made of RAU-FIBRO®

ANWENDUNG · APPLICATION

Durch DP (Polykristalliner Diamant) Zähne ideal für Zuschnitte sowie Formatschnitte in extrem abrasive, zu hohen Schneidenverschleiß führenden Materialien wie: Corian, Trespa, Laminat, MDF, Gips- und Zementgebundene Platten (Faserzement), Steinwollplatten, Heraklith, Eternit.

Blätter mit niedriger Zahnzahl wie: 160 mm mit 4 Zähnen, 190 mm mit 6 Zähnen, 230 mm mit 6 Zähnen, 250 mm mit 6 Zähnen und 300 mm mit 8 Zähnen, sind speziell geeignet für Gips- und Zementgebundene Platten. (Faserzement)

Speziell hervorragend ebenfalls für Duroplaste wie: Glasfaserverstärkte sowie Kohlefaserverstärkte Kunststoffe (GFK, CFK), Carbon, Aramidfaserkunststoffe (AFK) HP, HPL, PUR.

Niedere Zahnreihe für Zuschnitte, höhere Zahnreihe für Formatschnitte. Achtung: Kein Fertigschnitt-Blatt (DP-Bestückung = 4 mm). Fertigschnitt-Blätter siehe Art. 11 1370 Seite 939

Due to DP (Polycrystalline Diamond) teeth excellent for sizing, formatting, cross cuts in extreme abrasive, heavy machining and abrading materials such as: Corian, Trespa, laminates, MDF, gypsum and cement-bonded boards (fiber cement), Rockwool boards, Heraklith products, Eternit.

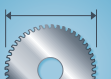

Circular saws with the lowest number of teeth as: 160 mm with 4 teeth, 190 mm with 6 teeth, 230 mm with 6 teeth, 250 mm with 6 teeth and 300 mm with 8 teeth, are specially designed for gypsum and cement-bonded panels (fiber cement).

Also excellent for Duroplastic materials such as: Glas fibre plastic (GFK), Carbon fibre plastic (CFK), Carbon, Aramid fibre plastic (AFK), HP, HPL, PUR.

Lower tooth row for sizing, higher tooth row for format cuts. Attention: no finishing cut blade (DP-Tip height = 4 mm). Finishing cut-blades see Art. 11 1370 page 939

MASCHINE · MACHINE

Für Formatkreissägen, Plattensägen, Tischkreissägen

For sizing saws, panel saws, bench saws

ANWENDUNG · APPLICATION

Durch DP (Polykristalliner Diamant) Zähne extrem lange Standzeiten gegenüber Hartmetall-bestückte Kreissägeblätter. Ideal für Zuschnitte sowie Formatschnitte in extrem abrasive, zu hohen Schneidenschleiß führenden Materialien wie: Corian, Trespa, Laminat, MDF, Gips- und Zementgebundene Platten, Steinwollplatten, Heraklith, Eternit.

Speziell hervorragend ebenfalls für Duroplaste wie: Glasfaserverstärkte sowie Kohlefaserverstärkte Kunststoffe (GFK, CFK), Carbon, Aramidfaserkunststoffe (AFK) HP, HPL, PUR.

Weiterhin hervorragend für Fertigschnitte in thermoplastische Vollplatten (Acrylglas, PMMA, Polyäthylen, Polyamid usw.) sowie duroplastische Vollplatten (Schichtstoffe, HPL, Hartpapier, Trespa, Resopal, Multiplex). Weiterhin für Polymergebundene Kunststoffe, Mineralwerkstoffe wie Corian, Noblan, Hi-Macs, Staron, Rausolid usw.

Hervorragend ebenfalls für Fertigschnitte in beidseitig kunststoffbeschichteten Plattenwerkstoffe, vorzugsweise in Verbindung mit Vorritzer. Ideal auch zum Schneiden von Kunststoff-Profilen.

Due to DP (Polycrystalline Diamond) teeth extremely long tool life compared to carbide tipped circular saws. Excellent for sizing, formatting, cross cuts in extreme abrasive, heavy machining and abrading materials such as: Corian, Trespa, laminates, MDF, gypsum and cement-bonded boards, Rockwool boards, Heraklith products, Eternit.

Also excellent for Duroplastic materials such as: Glas fibre plastic (GFK), Carbon fibre plastic (CFK), Carbon, Aramid fibre plastic (AFK), HP, HPL, PUR.

For finishing cuts in solid thermoplastic boards (PMMA, acrylic glass, polyethylene, polyamide etc.) and solid duroplastic boards (HPL-high-pressure-laminate, HP-Hardpaper, phenolic resin bonded paper, phenolic laminated cotton sheets, Trespa, Resopal, Multiplex). Also for polymerbound plastics, mineral materials such as Corian, Noblan, Hi-Macs, Staron, Rausolid etc.

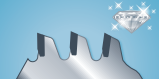

Excellent also for finishing cuts in double-side plastic coated boards, preferably in combination with coring sawblades. Ideal also for cutting plastic profiles.

ANWENDUNG · APPLICATION

Durch dünne Schnittbreite ideal auch für Akkumaschinen und für teure Edelhölzer, Furniere und Leisten, da wenig Verschnitt und Schnittdruck/Akkuverbrauch.

Niedere Zähnezahl: Grobe bis mittlere Schnittqualität in alle Holzwerkstoffe, Edelhölzer und Massivholz längs und quer, Plattenwerkstoffe einseitig furniert oder Kunststoff beschichtet, Hartgewebe, Hartpapier, dickere Kunststoffprofile und Platten (Thermoplaste) hoher Vorschub möglich.

Mittlere Zähnezahl: Gute Schnittqualität in alle Holzwerkstoffe, Edelhölzer, Massivholz und Leisten längs und quer, Plattenwerkstoffe einseitig/zweiseitig furniert oder Kunststoff beschichtet, Hartgewebe, Hartpapier, Furnier und Furnierpakete sowie Kunststoffprofile und Platten (Thermoplaste, Duroplaste).

Hohe Zähnezahl: Sehr gute Schnittqualität in alle Holzwerkstoffe, Edelhölzer, Massivholz und Leisten vorzugsweise Querschnitte. Plattenwerkstoffe zweiseitig furniert oder Kunststoff beschichtet, Hartgewebe, Hartpapier, Furnier und Furnierpakete sowie Kunststoffprofile und Platten (Thermoplaste, Duroplaste).

Durch spezielles Hartmetall sehr gut zum Sägen harter Thermoplaste wie z.B. dünne Platten, Hohlkammerplatten aus PC (Polycarbonat), PMMA (Acrylglas-Plexiglas) Siehe hierzu auch Artikel 11 1430 Seite 943

Due to thin-cut also ideal for battery machines and for cutting expensive precious wood, veneer, strips because of less waste/battery consumption.

Low number of teeth: Coarse to medium cutting quality in all wooden materials, precious wood and solid wood across and along the grain, panel and boards one-side plastic coated/veneered, paper-based laminate, thicker plastic profiles and plates (Thermoplastics). High feed rate possible

Medium number of teeth: Good cutting quality in all wooden materials, precious wood, solid wood and strips across and along the grain, panel and boards one-side/two side plastic coated/veneered, paper-based laminate, veneer and veneer packages, plastic profiles/plates (Thermoplastics, Duroplastics)

High number of teeth: Very good cutting quality in all wooden materials, precious wood, solid wood and strips preferably across the grain, panel and boards two side plastic coated/veneered, paper-based laminate, veneer and veneer packages, plastic profiles/plates (Thermoplastics, Duroplastics)

Due to special carbide also excellent for cutting hard thermoplastics such as thin panels, hollow section boards Made of PC (Polycarbonate), PMMA (Acrylic-glass/Plexiglass). See here also article 11 1430, page 943

MASCHINE · MACHINE

Für Handkreissägen, Tauchsägen, Tisch- und Formatkreissägen, Plattenaufteilsägen, Kappsägen, Akkusägen

For portable circular saws, bench- and sizing saws, panel sizing saws, cross-cut saws, cordless saws.

ANWENDUNG · APPLICATION

Durch spezielles Hartmetall/Zahnform ideal für Fertigschnitte in dünnen Platten und Profilmaterial aus harten Kunststoffen (Thermoplaste) wie: PVC, PE, PA, ABS, PS, POM PC, PMMA (Acrylglas). z.B. Hohlkammerplatten aus PMMA (Acrylglas).

Ebenfalls gut bei abrasiven, zu hohen Schneidenverschleiß führenden Materialien wie: GFK, CFK, Zementplatten, Gipsfaserplatten, Eternit.

Sie wünschen:

- Eine noch höhere Zähnezahl um die Schnittgüte/Standzeit zu verbessern?
 - Durch negativen Spanwinkel verbesserte Kontrolle bei Handvorschub?
 - Durch negativen Spanwinkel höhere Unempfindlichkeit gegen Zahnbruch?
- Siehe Art: 11 1130, Seite 963

Durch dünne Schnittbreite wenig Kraftaufwand und Verschnitt. Daher auch ideal für Akku-Maschinen.

Due to special carbide / tooth geometry excellent for finishing cuts in thin plates and profiles made of hard plastics (thermoplastics) such as: PVC, PE, PA, ABS, PS, POM PC, PMMA e.g. hollow section boards of PMMA (acrylic glass).

Also good for abrasive, heavy machining and abrading materials such as: GFK, CFK, fibre cement panels, gypsum, fibre boards, eternit.

You want:

- Even higher number of teeth to improve the cutting quality/tool life?
 - Due to negative rake angle improves control with manual feed?
 - Due to negative rake angle higher insensitivity to tooth breakage?
- See Art. 11 1130, page 963

Due to thin cutting width little cutting pressure and waste of material. Therefore also ideal for cordless machines.

| ✓ | | Profileleisten | Profiled wood |

ANWENDUNG · APPLICATION

Für Querschnitte in Weich- und Hartholz, Holzmischwerkstoffe, Leimholz, Schichtholz, Plattenwerkstoffe furniert oder beschichtet.

Durch spezielles Hartmetall auch hervorragend für Kunststoffe wie kunststoffbeschichtete Profile, dünnes Acrylglas, Duroplast-Profil und Leisten (hohe Zähnezahl wählen) geeignet.

Ebenfalls für harte Thermoplaste wie PA, PE, PS, POM, ABS.

Durch die negative Zahnform ist das Sägeblatt besser von Hand zu führen und wird nicht in das Schnittgut gezogen.

For cross cuts in soft and hard wood, wooden materials, glued wood, plywood, veneered or coated boards.

Due to special carbide also excellent for plastics such as: plastic laminated profiles, thin acrylic glass, duroplast profiles and strips (high number of teeth recommended).

Also for hard thermoplastics such as PA, PE, PS, POM, ABS.

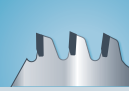

Due to the negative tooth shape, that saw blade can be guided easier by hand and is not pulled into the material to be cut.

- > Triple-chip/flat tooth (flat tooth with chamfer on both sides)

MASCHINE · MACHINE

Für Formatkreissägen, Plattensägen, Tischkreissägen

For sizing saws, panel saws, bench saws

ANWENDUNG · APPLICATION

Zum Formatieren von Platten in verschiedenen Dicken, Paketschnitte aus Thermoplaste wie: PVC, PE, PA, ABS, PS, POM.

Hervorragend auch zum Schneiden von Kunststoffprofilen sowie für Fertigschnitte in beidseitig kunststoffbeschichtete Span- und Faserwerkstoffe/Platten vorzugsweise in Verbindung mit Ritzer.

Durch spezielles Hartmetall auch gut bei abrasiven zu schnellem Schneidenverschleiß führenden Verbundstoffen wie faserverstärkte Gipskartonplatten, GFK, CFK.

Ebenfalls ideal für Duroplaste wie HPL Schichtstoff (Trespa, Resopal) und Mineralwerkstoffe wie Corian, Noblan, Staron usw.

For sizing panels of various thicknesses, cutting stacks made of thermoplastics such as: PVC, PE, PA, ABS, PS, POM.

Excellent also for cutting plastic profiles and finishing cuts in double-side plastic coated chip- and hard fibre materials/boards in combination with scoring sawblades.

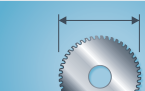

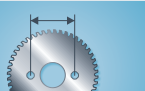

Due to special carbide teeth also good for cutting abrasive, heavy machining and abrading materials such as HPL, high-pressure-laminate (Trespa, Resopal) and mineral materials such as corian, noblan, staron etc.

TFP

- > Trapez-Flachzahn Positiv
- > Triple-chip/flat tooth positive

ANWENDUNG · APPLICATION

Für Fertigschnitte in thermoplastische Vollplatten (Acrylglas, PMMA, Polyäthylen, Polyamid usw.) sowie duroplastische Vollplatten (Schichtstoffe, HPL, Hartpapier, Trespa, Resopal, Multiplex).

Weiterhin für polymergebundene Kunststoffe, Mineralwerkstoffe wie Corian, Noblan, Hi-Macs, Staron, Rausolid usw.

Hervorragend ebenfalls für Fertigschnitte in beidseitig kunststoffbeschichteten Plattenwerkstoffe, vorzugsweise in Verbindung mit Vorritzer.

Ideal auch zum Schneiden von Kunststoff-Profilen.

For finishing cuts in solid thermoplastic boards (PMMA, acrylic glass, polyethylene, polyamide etc.) and solid duroplastic boards (HPL-high-pressure-laminate, HP-Hardpaper, phenolic resin bonded paper, phenolic laminated cotton sheets, Trespa, Resopal, Multiplex).

Also for polymer-bound plastics, mineral materials such as: Corian, Noblan, Hi-Macs, Staron, Rausolid etc.

Excellent also for finishing cuts in double-side plastic coated boards, preferably in combination with coring sawblades.

Ideal also for cutting plastic profiles.

MASCHINE · MACHINE

Für Formatkreissägen, Plattensägen, Tischkreissägen

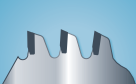

For sizing saws, panel saws, bench saws

Bau · Universal
Construction · Universal

Die Berechnung von Vc und fz für handgeführte Maschinen bei denen in der Regel die Drehzahl nicht einstellbar ist macht wenig Sinn. Weiterhin werden mit Universalblättern oftmals weiche und harte Werkstoffe in einem Werkstück kombiniert gesägt. Zum Beispiel Holz mit Nägeln, Kunststoffe mit Stahleinlage, Bleche mit PU/Schaum-Füllung usw.

The calculation of Vc and Fz for handheld machines is mostly pointless as the mobile machines are normally operated with manual feed and the parameter (e.g. rpm) are not adjustable.

Furthermore, soft and hard materials are often combined in one workpiece.

Hier ist Fingerspitzengefühl und "herantasten" gefragt. Auf der untenstehenden Tabelle geben wir grobe Richtwerte der empfohlenen Drehzahlen in gängige Materialien.

For example, wood with nails, plastic materials combined with inside steel frame (window frames), sheet material with PU / foam filling, etc. In this case you have to test and follow your "feeling".

In the table below we give a rough guide to the recommended speed in common materials.

Drehzahl **n** (U/min) • Revolution per minute **n** (rpm)

| | 1000 | 1500 | 2000 | 2500 | 2850 | 3000 | 4000 | 4500 | 5000 | 5600 | 6000 | 8000 | 9000 | 10000 | 12000 | 18000 |

MASCHINE · MACHINE

Für Handkreissägen, Tauchsägen, Kapp- und Gehrungssägen, Radialarmsägen, Tisch- und Formatkreissägen, akkubetriebene Maschinen und passend ebenfalls für sogenannte DRY-CUTTER Maschinen mit reduzierten Drehzahlen wie zum Beispiel: JEPSON, RIDGID, ELU, RYOBI...

For portable machines, cross-cut saws, panel and sizing saws, mitre saws, table and radial arms saws, battery-driven saws and suitable also for so-called DRY CUTTER machines with reduced speeds such as: Jepson, RIDGID, ELU, RYOBI...

Bei Stahl ist es vorteilhaft mit reduzierten Drehzahlen (min⁻¹) zu arbeiten (siehe Tabelle unten). Die Verwendung von Schneidspray oder Mecutwachs erhöht wesentlich die Standzeit (Schneidöle siehe ab Seite 1144).

For steel, it is beneficial to work at reduced speeds (see table below). Use of cutting spray or Mecut wax increases the service life (coolants see from page 1144)

Ø 136-150 mm = 4000-3600 min⁻¹/rpm

Ø 160-200 mm = 3500-3000 min⁻¹/rpm

Ø 210-250 mm = 2800-1900 min⁻¹/rpm

Ø 260-330 mm = 1800-1500 min⁻¹/rpm

Ø 350-400 mm = 1400-1000 min⁻¹/rpm

Ø 420-500 mm = 900-700 min⁻¹/rpm

Bitte achten Sie unbedingt auf absolut feste und vibrationsfreie Befestigung des Werkstücks. Nichtbeachtung führt zu Zahnbruch/erhöhtem Verschleiß. Empfehlungen hierzu siehe Seite 957.

Please pay attention to absolutely stable/complete and vibration-free clamping of the work piece. Failure to observe leads to tooth breakage/increased wear. Recommendations can be found on page 957.

Trennen von Dünnschicht bis ca. 3 mm Wandstärke sowie Sandwichmaterial siehe Art. 10 7400 Seite 897

Trennen von Edelstahl bis ca. 4 mm siehe Art. 10 7300 Seite 896

Trennen von Aluprofilen/Alublechen siehe Art. 10 8000 Seite 902 / Art. 11 1100 Seite 911 / Art. 11 1120 Seite 913

Trennen von Holz, Kunststoffen, NE-Metallen wie Alu, Baustähle siehe Art. 10 8055 Seite 899

Cutting thin sheet up to approx. 3 mm wall thickness and sandwich material: see item 10 7400 page 897

Cutting stainless steel up to approx. 4 mm: see item 10 7300 page 896

Cutting of aluminum profiles/sheets: see item 10 8000 page 902 / item 11 1100 page 911 / item 11 1120 page 913

Cutting of wood, plastics, non-ferrous metals like aluminum, mild steels: see item 10 8055 page 899

ANWENDUNG · APPLICATION

Schwerpunkt ist das Trennen von Profilmaterial sowie Bleche bis ca. 6 mm Wandstärke. Die höhere Zähnezahl ist bis ca. 3 mm Wandstärke geeignet. Für noch höhere Standzeiten siehe unsere neuen **Super Dry-Cutter Baustähle** Blätter. (Art. 10 7150 / Seite 956).

Sie suchen ein besondere gutes Preis-Leistungsverhältnis dieser Blätter? Sie haben einen hohen Verbrauch an Blättern und wollen / können die Blätter nicht nachschleifen? Dann ist unsere BESTSELLER Reihe das richtige für Sie. Siehe nächste Seite.

The focus is on cutting profile material and sheet metals up to 6 mm wall thickness. The higher number of teeth is suitable up to 3 mm thickness. For higher service lives see our new **Super Dry-Cutter mild steel** blades. (Art. 10 7150 / page 956).

Are you looking for a special price-performance ratio for this blades? You have a high consumption of this blades and do not want or cannot regrind them? Then our BESTSELLER series is right for you. See next page.

MASCHINE · MACHINE

Für Handkreissägen, Tauchsägen, Kapp- und Gehrungssägen, Radial-armsägen, Tisch- und Formatkreissägen, akkubetriebene Maschinen und passend ebenfalls für sogenannte DRY-CUTTER Maschinen mit reduzierten Drehzahlen wie zum Beispiel: JEPSON, RIDGID, ELU, RYOBI...

For portable machines, cross-cut saws, panel and sizing saws, mitre saws, table and radial arms saws, battery-driven saws and suitable also for so-called DRY CUTTER machines with reduced speeds such as: Jepson, RIDGID, ELU, RYOBI...

Bei Stahl ist es vorteilhaft mit reduzierten Drehzahlen (min⁻¹) zu arbeiten (siehe Tabelle unten). Die Verwendung von Schneidspray oder Mecut-wachs erhöht wesentlich die Standzeit (Schneidöle siehe ab Seite 1144).

For steel, it is beneficial to work at reduced speeds (see table below). Use of cutting spray or Mecut wax increases the service life (coolants see from page 1144)

- Ø 136-150 mm = 4000-3600 min⁻¹/rpm
- Ø 160-200 mm = 3500-3000 min⁻¹/rpm
- Ø 210-250 mm = 2800-1900 min⁻¹/rpm
- Ø 260-330 mm = 1800-1500 min⁻¹/rpm
- Ø 350-400 mm = 1400-1000 min⁻¹/rpm

Bitte achten Sie unbedingt auf absolut feste und vibrationsfreie Befestigung des Werkstücks. Nichtbeachtung führt zu Zahnbruch/erhöhtem Verschleiß. Empfehlungen hierzu siehe Seite 957.

Please pay attention to absolutely stable/complete and vibration-free clamping of the work piece. Failure to observe leads to tooth breakage/increased wear. Recommendations can be found on page 957.

Trennen von Dünnschicht bis ca. 3 mm Wandstärke sowie Sandwichmaterial siehe Art. 10 7400 Seite 897

Cutting thin sheet up to approx. 3 mm wall thickness and sandwich material: see item 10 7400 page 897

Trennen von Edelstahl bis ca. 4 mm siehe Art. 10 7300 Seite 896

Cutting stainless steel up to approx. 4 mm: see item 10 7300 page 896

Trennen von Aluprofilen/Alublechen siehe Art. 10 8000 Seite 902 / Art. 11 1100 Seite 911 / Art. 11 1120 Seite 913

Cutting of aluminum profiles/sheets: see item 10 8000 page 902 / item 11 1100 page 911 / item 11 1120 page 913

Trennen von Holz, Kunststoffen, NE-Metallen wie Alu, Baustähle siehe Art. 10 8055 Seite 899

Cutting of wood, plastics, non-ferrous metals like aluminum, mild steels: see item 10 8055 page 899

ANWENDUNG · APPLICATION

Schwerpunkt ist das Trennen von Profilmaterial sowie Bleche bis ca. 6 mm Wandstärke. Die höhere Zähnezahl ist bis ca. 3 mm Wandstärke geeignet. Für noch höhere Standzeiten.

Blätter der DRY-CUTTER Serien werden oftmals stark beansprucht. Durch Zahnbruch oder zu starker Abstumpfung ist ein Nachschärfen oftmals nicht mehr möglich. Hier ist unsere BESTSELLER Serie eine Alternative als „EINWEGKREISSÄGEBLÄTTER“.

The focus is on cutting profile material and sheet metals up to 6 mm wall thickness. The higher number of teeth is suitable up to 3 mm thickness. For higher service lives.

Blades of the DRY-CUTTER series are often heavily used. A re-sharpening is due to tooth breakage or excessive blunting often no longer possible. Here is our BESTSELLER series an alternative as "THROW-AWAY" blades

| ✓ | | Baustahl | Mild steel |
|---|--|----------|------------|

ANWENDUNG · APPLICATION

Schwerpunkt ist das Trennen von Profilmaterial sowie Blechen. Profilmaterial Wandstärke ab 3 mm bis 8 mm sowie Bleche ab 3 mm bis 10 mm. Hierfür verwenden Sie bitte die Abmessungen 305 mm mit 60 Zähnen, 355 mm mit 80 Zähnen.

Bei den restlichen Abmessungen empfehlen wir Profilmaterial ab 2 mm bis 6 mm Wandstärke, sowie Bleche ab 2 mm bis 8 mm.

Durch CERMET-Zähne (Keramik) **verdoppelt sich die Standzeit** gegenüber der DRY-CUTTER BAUSTÄHLE, Ausführung Art. 10 7100 Seite 892.

Speziell bei CERMET ist auf absolut feste und vibrationsfreie Befestigung des Werkstückes zu achten. Dies ist ebenfalls wichtig für alle unsere DRY-CUTTER Modelle Art. 10 7100, 10 7130, 10 7300, 10 7400. Siehe hierzu auch nächste Seite „Empfehlungen zum spannen verschiedener Profile.“

The focus is on cutting profile material and sheet metal. Profile material from 3 mm up to 8 mm wall thickness and sheet metal from 3 mm up to 10 mm thickness. Please use here the dimension 305 mm with 60 teeth and 355 mm with 80 teeth.

For all the remaining dimension we recommend: Profile material from 2 mm up to 6 mm wall thickness and sheet metal from 2 mm up to 8 mm thickness.

CERMET teeth (ceramics) approx. **doubles the service life** as compared to our Dry-Cutter mild steel Art. 10 7100 page 892.

CERMET blades needs stable, complete and vibration-free clamping of the work piece. This is also important for all DRY-CUTTER versions such as Article 10 7100, 10 7130, 10 7300 and 10 7400.

See here our recommendation next page "Tips for cutting different shapes".

Empfehlung zum Trennen von Profilen in verschiedenen Formen
Tips for cutting different shapes

10 7150

Dünne Profile welche nur unzureichend befestigt/eingespannt sind fangen an zu vibrieren. Der Schnitt wird unsauber und ungenau. Die Standzeit des Blattes wird wesentlich verringert. Das Blatt kann sogar komplett zerstört werden. Abstützmaterial kann helfen diese Risiken zu vermeiden.

Thin materials and incomplete clamping can cause vibration and deflection which shortens the blade life at a tremendous level. Use of supportive material can reduce these risks.

Dünne Rohre · Thin Pipes

Material vibriert während dem sägen
Material vibrates during cut

Abstützmaterial reduziert das Risiko das Blatt zu beschädigen.
Having supportive material can reduce these risk of damage to the blade.

Rundes Vollmaterial oder Rohre · Round Bars or Pipes

Rundes Vollmaterial oder Rohre können sich während des Sägevorgangs drehen, obwohl sie korrekt befestigt/eingespannt sind. Dies kann kontrolliert werden indem eine Markierung auf das Material angebracht wird. Dreht sich das Material, wird die Standzeit des Blattes erheblich reduziert oder das Blatt kann komplett zerstört werden. Bitte mit Abstützmaterial arbeiten.

Round Bars or Pipes can move during cut, even with correct clamping. This can be checked by a "marking" onto the material. If the material is moving, the blade is likely to be damaged.

Dünne Profile eine Seite offen · Thin open ended materials

Die mit Pfeilen markierte Stellen fangen an zu vibrieren
The parts below the arrow will vibrate during cut

Winkelleisten · Angel bar

Schenkel nach unten legen und von der Winkelseite anfangen zu sägen
Face down and start cutting from the angel side

Blatteintrittswinkel · Blade entrance

Der Eintrittswinkel des Blattes hat ebenfalls einen starken Einfluss auf die Standzeit. Das Werkstück sowie das Blatt sollten so eingestellt sein, dass der erste Schnitt des Blattes an dem kleinsten Kontaktpunkt des Werkstückes beginnt. Blade entrance point also effect the blade life. Material and Blade should be set considering the minimum contact pont.

ANWENDUNG · APPLICATION

Schwerpunkt ist das Trennen von dünnwandigen Blechen/Profilen aus Baustahl bis zu 3 mm Wandstärke. Hervorragend für Sandwichmaterialien mit dünnen Deckschichten aus Stahl/Alu/Kunststoffen von ca. 0,2-1 mm.

Weiterhin gut geeignet zum Trennen von Blechen/Profilen aus Ne-Metallen (Alu, Kupfer, Messing) und Kunststoffen bis ca. 5 mm Wandstärke.

Bitte achten Sie unbedingt auf absolut feste und vibrationsfreie Befestigung des Werkstücks. Nichtbeachtung führt zu Zahnbruch/erhöhtem Verschleiß. Empfehlungen hierzu siehe Seite 957.

Focus is on the cutting thin-walled sheet metal/steel profiles up to 3 mm wall thickness. Great for sandwich materials with thin layers of steel/aluminum/plastics of about 0.2-1 mm.

Also highly suitable for cutting sheets/profiles from non-ferrous metals (Aluminum, copper, brass) and plastics up to 5 mm wall thickness.

Please pay attention to absolutely stable/complete and vibration-free clamping of the work piece. Failure to observe leads to tooth breakage/ increased wear. Recommendations can be found on page 957.

ANWENDUNG · APPLICATION

Das ideale Blatt für den Ladenbau, Messebau, Renovierungsarbeiten. Für eine Vielzahl von Materialien wie: Ne-Metalle, Kunststoffe, Plexiglas, Spanplatten, Thermofassadenplatten. Weitere Alu-Negativ Blätter siehe Art. 11 1100 Seite 911, Art. 11 1120 Seite 913 sowie Art. 11 1130 Seite 915.

The ideal blade for shop construction, trade fair construction, renovation work. For many materials such as: non-ferrous metals, plastics, plexiglas, chipboard, thermo façade plates. Other aluminum negative sheets: see item 11 1100 page 911, item 11 1120 page 913, and item 11 1130 page 915.

Winkelschleifer + Brutal Einweg-Sägeblätter
Angle Grinder + Brutal disposable saw blades

MASCHINE · MACHINE

Für Handkreissägen, Tauchsägen, Kapp- und Gehrungssägen, Radialarmsägen, Tisch- und Formatkreissägen, akkubetriebene Maschinen und passend ebenfalls für sogenannte DRY-CUTTER Maschinen mit reduzierten Drehzahlen wie zum Beispiel: JEPSON, RIDGID, ELU, RYOBI...

For portable machines, cross-cut saws, panel and sizing saws, mitre saws, table and radial arms saws, battery-driven saws and suitable also for so-called DRY CUTTER machines with reduced speeds such as: JEPSON, RIDGID, ELU, RYOBI...

- Ø 160-200 mm = 3500-3000 min⁻¹ /rpm
- Ø 210-250 mm = 2800-1900 min⁻¹ /rpm
- Ø 260-305 mm = 1800-1500 min⁻¹ /rpm
- Ø 350-400 mm = 1500-1000 min⁻¹ /rpm

Bei Stahl ist es vorteilhaft mit reduzierten Drehzahlen (min⁻¹) zu arbeiten (siehe Tabelle oben). Die Verwendung von Schneidspray oder Mecutwachs erhöht wesentlich die Standzeit (Schneidöle siehe ab Seite 1144).

For steel, it is beneficial to work at reduced speeds (see table above). Use of cutting spray or Mecut wax increases the service life (for cutting oils, see from page 1144)

€
38,00

Blätter 120 mm passen für Winkelschleifer 115 + 125 mm.

Blade diameter 120 mm suitable for angle grinder diameter 115-125 mm.

Verwendung in Europa nur erlaubt mit Schutzhaube (wird komplett mit Spindelmutter, Stirnlochschlüssel, Absaugstutzen und Bedienungsanleitung geliefert).

Use in europe only permitted with protection cover (delivered completely with spindle nut, open-faced spanner, exhaust socket and operating instructions).

ANWENDUNG · APPLICATION

Brutal Einweg-Sägeblätter zum Sägen „fast“ aller Materialien. Ideal für Bau und Handwerk. Durch geringe Schnittbreite wenig Schnittverlust sowie Schnittwiderstand. Daher auch ideal für Akku-Maschinen.

Niedrigste Zähnezahl: Zum schnellen Trennen aller Arten von Hölzern (auch mit Nägeln, Klammern), Kunststoffen, NE-Metallen. Grober Schnitt.

Mittlere Zähnezahl: Zum Trennen aller angegebenen Materialien. Mittlere Schnittgüte (Zum Trennen von Baustählen, NE-Metalle empfehlen wir die höchste Zähnezahl).

Höchste Zähnezahl: Zum Trennen aller angegebenen Materialien. Vorzugsweise für alle Metalle, wie Baustähle, Alu und andere NE-Metalle.

Brutal disposable saw blades for sawing "almost" any material. Ideal for construction and crafts. The low cutting width leads to little cutting wastage and cutting resistance. Therefore also ideal for battery-powered machines.

Lowest tooth number: For fast cutting of all kinds of woods (also with nails, clamps, plastics, non-ferrous metals). Coarse cut.

Medium tooth number: For cutting of all specified materials. Medium cutting quality (for cutting of mild steels, non-ferrous metals, we recommend the highest number of teeth).

Highest tooth number: For cutting of all specified materials. Preferably for all metals like mild steels, aluminum and other non-ferrous metals.

TFF-N

MASCHINE · MACHINE

Für Handkreissägen, Tauchsägen, Tisch- und Formatkreissägen, Plattenaufteilsägen, Kappsägen, Akkusägen

For portable circular saws, bench- and sizing saws, panel sizing saws, cross-cut saws, cordless saws.

ANWENDUNG · APPLICATION

Durch spezielles Hartmetall/Zahnform ideal für Fertigschnitte in dünnen Platten und Profilmaterial aus harten Kunststoffen (Thermoplaste) wie: PVC, PE, PA, ABS, PS, POM PC, PMMA (Acrylglas). z.B. Hohlkammerplatten aus PMMA (Acrylglas).

Ebenfalls gut bei abrasiven, zu hohen Schneidenverschleiß führenden Materialien wie: GFK, CFK, Zementplatten, Gipsfaserplatten, Eternit.

Ebenfalls exzellent geeignet für Sandwichmaterialien mit dünnen Deckschichten. Maximale Deckschichtdicke Nicht-Eisen-Metalle / Kunststoffe = 1,0 mm
Maximale Deckschichtdicke Eisenblech = 0,3 mm
Hervorragend auch für dünne Profile bis 1 mm Wandstärke aus Nicht-Eisen-Metalle, wie Alu, Kupfer, Messing.

Durch dünne Schnittbreite wenig Kraftaufwand und Verschnitt. Daher auch ideal für Akku-Maschinen.

Due to special carbide / tooth geometry excellent for finishing cuts in thin plates and profiles made of hard plastics (thermoplastics) such as: PVC, PE, PA, ABS, PS, POM PC, PMMA e.g. hollow section boards of PMMA (acrylic glass).

Also good for abrasive, heavy machining and abrading materials such as: GFK, CFK, fibre cement panels, gypsum, fibre boards, eternit.

Also excellent for sandwich materials with thin layers. Maximum layer thickness for non-ferrous-metals / plastics = 1,0 mm
Maximum layer thickness iron sheet metal = 0,3 mm
Excellent also for thin profiles up to 1 mm thickness made of non-ferrous metal such as aluminum, copper, brass.

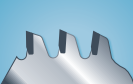

Due to thin cutting width little cutting pressure and waste of material. Therefore also ideal for cordless machines.

ANWENDUNG · APPLICATION

Für den harten Allroundeinsatz auf der Baustelle. Schneidet sämtliche Bauhölzer längs und quer. Schalttafeln mit Mörtel, bzw. Blechummantelung, Paletten, Gasbetonsteine, Heraklith, Zementgebundene Faserplatten u.ä. Für höchste Standzeit + sauberen Schnitt siehe Superbausäge Art. 11 1260 auf Seite 965.

For tough all-round application on the building site. Makes longitudinal and cross-cuts in all construction wood. Form-work boards with mortar or sheet metal casing, pallets, aerated concrete, Heraklith products, cemented fibreboard, and similar material. For the highest service life + clean cuts see the super construction saw blades, item 11 1260, on page 965.

MASCHINE · MACHINE

Für Handkreissägen, Tauchsägen, Kapp- und Gehrungssägen, Tischkreissägen, Formatkreissägen, Baukreissägen, Brennholzkreissägen, Pendelkreissägen, Zugkreissägen.

For portable circular saws, cutting and mitre saws, table circular saws, format circular saws, construction circular saws, firewood saws, pendulum saws, course saws.

ANWENDUNG · APPLICATION

Extrem robustes Blatt für das Bauhandwerk, Schreinereien, Palettenbauer, Dachdecker u.ä.

Höchste Standzeit und saubere Schnitte in: Bauhölzern längs und quer, Schalltafeln mit Mörtel bzw. Blechummantelung, Paletten, Gasbetonsteine, Heraklith- und zementgebundenen Faserplatten, Kunststoffen, Hartfaser- und Spanplatten, Leimholz, Corian, Eternit.

Sogar zum Trennen vom Ne-Profilmaterial wie Alu, Messing, Kupfer.

Extremely durable blade for the building trade, carpenter's workshops, pallet manufacturers, roofers, and similar professions.

For the highest service life and clean cuts in: construction wood, formwork boards with mortar or sheet metal casing, pallets, aerated concrete, Heraklith products and cemented fibreboard, plastics, hard fibreboard and chipboard, laminated wood, Corian, Eternit.

Also for coarse cutting non-ferrous profiled metals, such as aluminum, brass and copper.

> Flat tooth

MASCHINE · MACHINE

Für Handkreissägen, Tauchsägen, Kapp- und Gehrungssägen, Tisch- und Formatkreissägen

For hand-held circular saws, mitre saws, cross-cut saws, table and sizing saws

ANWENDUNG · APPLICATION

Durch DP (Polykristalliner Diamant) Zähne ideal für Zuschnitte sowie Formatschnitte in extrem abrasive, zu hohen Schneidenschleiß führenden Materialien wie: Corian, Trespa, Laminat, MDF, Gips- und Zementgebundene Platten (Faserzement), Steinwollplatten, Heraklith, Eternit.

Blätter mit niedriger Zähnezahl wie: 160 mm mit 4 Zähnen, 190 mm mit 6 Zähnen, 230 mm mit 6 Zähnen, 250 mm mit 6 Zähnen und 300 mm mit 8 Zähnen, sind speziell geeignet für gips- und zementgebundene Platten. (Faserzement)

Speziell hervorragend ebenfalls für Duroplaste wie: Glasfaserverstärkte sowie Kohlefaserverstärkte Kunststoffe (GFK, CFK), Carbon, Aramidfaserkunststoffe (AFK) HP, HPL, PUR.

Niedere Zahnreihe für Zuschnitte, höhere Zahnreihe für Formatschnitte. Achtung: Keine Fertigschnitt-Blatt (DP-Bestückung = 4 mm). Fertigschnitt-Blätter siehe Art. 11 1370 Seite 939

Due to DP (Polycrystalline Diamond) teeth excellent for sizing, formatting, cross cuts in extreme abrasive, heavy machining and abrading materials such as: Corian, Trespa, laminates, MDF, gypsum and cement-bonded boards (fiber cement), Rockwool boards, Heraklith products, Eternit.

Circular saws with the lowest number of teeth as: 160 mm with 4 teeth, 190 mm with 6 teeth, 230 mm with 6 teeth, 250 mm with 6 teeth and 300 mm with 8 teeth, are specially designed for gypsum and cement-bonded panels (fiber cement).

Also excellent for Duroplastic materials such as: Glas fibre plastic (GFK), Carbon fibre plastic (CFK), Carbon, Aramid fibre plastic (AFK), HP, HPL, PUR.

Lower tooth row for sizing, higher tooth row for format cuts. Attention: no finishing cut blade (DP-Tip height = 4 mm). Finishing cut-blades see Art. 11 3070 page 939

Abrasiv

Abrasive

Dieses Kapitel hebt besonders die Bearbeitung von Werkstoffen hervor, die schwierig zu bearbeiten sind und zu hohem Schneidenschleiß führen

This chapter focuses on the machining of materials difficult to machine and causing high cutting edge wear.

Schnittwertempfehlungen · Recommended cutting values

| Werkstoffgruppe Material Group | Werkstoffbeispiele Material examples | Vc (m/s) Schnittgeschwindigkeit Cutting speed | fz (mm/z) Vorschub pro Zahn Feed per tooth | |
|---|--|--|--|-----------|
| Gipsgebunden Gypsum bound | Gipsfaserplatten, Gipsfaserplatten mit MDF/Funier, Gipskartonplatten Gypsum fibre board, gypsum fibre board with MDF/Veneer, gypsum plaster board | 40–65 | 0,1–0,25 | |
| Zementgebunden Cement bound | Zementfaserplatten, Eternit Fibre cement board, Eternit | 40–60 | 0,02–0,05 | |
| Steinwollplatten Rockwool board | Rockwool | 2–8 | 0,01–0,03 | |
| Duroplaste Duroplastics | Glasfaserverstärkte und Kohlefaserverstärkte Kunststoffe GFK/CFK Glass fibre and carbon fibre reinforced plastics GFK/CFK | 20–50 | 0,01–0,03 | |
| | HPL-Schichtstoffplatten HPL (High-Pressure-Laminate) | Trespa®, Resopal®, Wodego®, Duropal®, Formica®, Unilin®, Kronospan®, Homapal®, Decodur®, Abet® | 50–70 | 0,01–0,08 |
| | Mineralwerkstoff Corian, Noblan, Hi-Macs, Staron, Rausolid Mineral material Corian, Noblan, Hi-Macs, Staron, Rausolid | 50–70 | 0,02–0,04 | |
| Mineralisch-Acrylge- bundene Materialien z.B. Küchenplatten/ Waschbecken | Corian®, Noblan®, Hi-Macs®, Staron®, Rausolid®, Varicor® | 50-70 | 0,02-0,04 | |
| Mineral-Acrylic bound materials e.g. Kitchen worktops/ sink | | | | |

Festlegung der Schnittgeschwindigkeit Vc
 Determination of cutting speed Vc

$$Vc \text{ (m/s)} = \frac{D \cdot \pi \cdot n}{60 \cdot 1000}$$

Vc (m/s) = Schnittgeschwindigkeit · Cutting speed

Festlegung der Vorschubgeschwindigkeit Vf
 Determination of feed rate Vf

$$Vf \text{ (m/min)} = \frac{fz \cdot n \cdot Z}{1000}$$

Vf (m/min) = Vorschubgeschwindigkeit · Feed rate

fz (mm/z) = Vorschub pro Zahn · Feed per tooth

D (mm) = Sägendurchmesser · Saw blade diameter

n (min⁻¹) = Drehzahl · rpm

Z = Anzahl der Zähne · Number of teeth

Festlegung der Drehzahl n
 Determination of revolution speed n

$$n \text{ (min}^{-1}\text{)} = \frac{Vc \cdot 1000 \cdot 60}{D \cdot \pi}$$

Abrasive
Abrasive

| Art. Ø mm | Type | Anwendung · Application | |
|--|--|---|-----|
| 11 1130 Ø mm 120-500  | Harte Kunststoffe · Abrasive Werkstoffe · Fertigschnitt/ Dünnschnitt · Negativ | Ideal bei abrasiven, zu hohem Schneidenverschleiß führenden Materialien wie: GFK, CFK, Zementplatten, Gipsfaserplatten, Eternit. Ebenfalls gut für Fertigschnitte in allen Kunststoffen. Exzellent für Hohlkammerplatten aus PMMA (Acrylglas). | 971 |
| | Hard plastics · Abrasive materials · Finishing-cut/Thin-cut · Negative | Ideal for abrasive, heavy machining and abrading materials such as: GFK, CFK, fibre cement panels, gypsum, fibre boards, eternit. Also good for finishing cuts in all plastics. Excellent for hollow section boards for PMMA (acrylic glass). | |
| 11 1350  Ø mm 160-350  | Diamant Universal | Durch DP (Polykristalliner Diamant) Zähne ideal für Zuschnitte sowie Formatschnitte in extrem abrasive, zu hohen Schneidenverschleiß führenden Materialien wie: Corian, Trespa, Laminat, MDF, Gips- und Zementgebun- dene Platten (Faserzement), Steinwollplatten, Heraklith, Eternit (CFK, GFK, Carbon). | 973 |
| | Diamond Universal | Due to DP (Polycrystalline Diamond) teeth excellent for sizing, formatting, cross cuts in extreme abrasive, heavy machining and abrading materials such as: Corian, Trespa, laminates, MDF, gypsum and cement-bonded boards (fiber cement), Rockwool boards, Heraklith pro- ducts, Eternit (CFK, GFK, carbon). | |
| 11 1370  Ø mm 250-350  | Diamant · Formatieren · Fertigschnitt · Harte Kunststoffe · Abrasive Werkstoffe | Durch DP (Polykristalliner Diamant) Zähne ideal zum Trennen extrem abrasiver, zu hohem Schneidenverschleiß führender Materialien. | 975 |
| | Diamond · Panel-sizing · Finishing cut · Hard plastics · Abrasive materials | Due to DP (Polychrystalline Diamond) teeth excellent for cutting extreme abrasive, heavy machining and abrading materials. | |
| 11 1430 Ø mm 120-500  | Harte Kunststoffe · Abrasive Werkstoffe · Fertigschnitt/Dünnschnitt | Fertigschnitte in harte Kunststoffe und abrasive Materialien wie GFK, CFK, Zementfaserplatten/ Gipsfaserplatten, Eternit ... | 977 |
| | Hard plastics · abrasive materials · Finishing-cut / thin-cut | Finishing cuts in hard plastics and abrasive material such as: GFK, CFK, fibre cement panels, gypsum fiber boards, eternit ... | |
| 11 1460 Ø mm 250-400  | Formatieren · Fertigschnitt · Harte Kunststoffe · Abrasive Werkstoffe | Formatieren von Platten/Profilen in verschiedenen Dicken aus harten Kunststoffen. Weiterhin gut bei abrasiven Werkstoffen wie GFK, CFK, Zementfaserplatten/Gips- faserplatten, Eternit ... | 979 |
| | Panel-sizing · Finishing cut · Hard plastics · Abrasive materials | For sizing panels/profiles in various thicknesses. Also very good in abrasive, heavy machining/abrading materi- als such as: GFK, CFK, fibre cement panels, gypsum fiber boards, eternit ... | |

| ✓ | | Dünnscheibe, Sandwichmaterial, Verbundstoffe | Thin iron sheets, sandwich material, composites |
| ✓ | | Dünne Profile aus Ne-Metall wie Alu, Messing, Kupfer | Thin profiles made of non ferrous materials like alu, copper, brass |

ANWENDUNG · APPLICATION

Durch spezielles Hartmetall/Zahnform ideal für Fertigschnitte in dünnen Platten und Profilmaterial aus harten Kunststoffen (Thermoplaste) wie: PVC, PE, PA, ABS, PS, POM PC, PMMA (Acrylglas). z.B. Hohlkammerplatten aus PMMA (Acrylglas).

Ebenfalls gut bei abrasiven, zu hohen Schneidenverschleiß führenden Materialien wie: GFK, CFK, Zementplatten, Gipsfaserplatten, Eternit.

Ebenfalls exzellent geeignet für Sandwichmaterialien mit dünnen Deckschichten. Maximale Deckschichtdicke Nicht-Eisen-Metalle / Kunststoffe = 1,0 mm
Maximale Deckschichtdicke Eisenblech = 0,3 mm
Hervorragend auch für dünne Profile bis 1 mm Wandstärke aus Nicht-Eisen-Metalle, wie Alu, Kupfer, Messing.

Durch dünne Schnittbreite wenig Kraftaufwand und Verschnitt. Daher auch ideal für Akku-Maschinen.

Due to special carbide / tooth geometry excellent for finishing cuts in thin plates and profiles made of hard plastics (thermoplastics) such as: PVC, PE, PA, ABS, PS, POM PC, PMMA e.g. hollow section boards of PMMA (acrylic glass).

Also good for abrasive, heavy machining and abrading materials such as: GFK, CFK, fibre cement panels, gypsum, fibre boards, eternit.

Also excellent for sandwich materials with thin layers. Maximum layer thickness for non-ferrous-metals / plastics = 1,0 mm
Maximum layer thickness iron sheet metal = 0,3 mm
Excellent also for thin profiles up to 1 mm thickness made of non-ferrous metal such as aluminum, copper, brass.

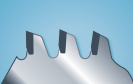

Due to thin cutting width little cutting pressure and waste of material. Therefore also ideal for cordless machines.

ANWENDUNG · APPLICATION

Durch DP (Polykristalliner Diamant) Zähne ideal für Zuschnitte sowie Formatschnitte in extrem abrasive, zu hohen Schneidenverschleiß führenden Materialien wie: Corian, Trespa, Laminat, MDF, gips- und zementgebundene Platten (Faserzement), Steinwollplatten, Heraklith, Eternit.

Blätter mit niedriger Zähnezahl wie: 160 mm mit 4 Zähnen, 190 mm mit 6 Zähnen, 230 mm mit 6 Zähnen, 250 mm mit 6 Zähnen und 300 mm mit 8 Zähnen, sind speziell geeignet für gips- und zementgebundene Platten. (Faserzement)

Speziell hervorragend ebenfalls für Duroplaste wie: Glasfaserverstärkte sowie Kohlefaser verstärkte Kunststoffe (GFK, CFK), Carbon, Aramidfaserkunststoffe (AFK) HP, HPL, PUR.

Niedere Zahnreihe für Zuschnitte, höhere Zahnreihe für Formatschnitte. Achtung: Kein Fertigschnitt-Blatt (DP-Bestückung = 4 mm). Fertigschnitt-Blätter siehe Art. 11 1370 Seite 939

Due to DP (Polycrystalline Diamond) teeth excellent for sizing, formatting, cross cuts in extreme abrasive, heavy machining and abrading materials such as: Corian, Trespa, laminates, MDF, gypsum and cement-bonded boards (fiber cement), Rockwool boards, Heraklith products, Eternit.

Circular saws with the lowest number of teeth as: 160 mm with 4 teeth, 190 mm with 6 teeth, 230 mm with 6 teeth, 250 mm with 6 teeth und 300 mm with 8 teeth, are specially designed for gypsum and cement-bonded panels (fiber cement).

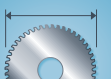

Also excellent for Duroplastic materials such as: Glas fibre plastic (GFK), Carbon fibre plastic (CFK), Carbon, Aramid fibre plastic (AFK), HP, HPL, PUR.

Lower tooth row for sizing, higher tooth row for format cuts. Attention: no finishing cut blade (DP-Tip height = 4 mm). Finishing cut-blades see Art. 11 1370 page 939

| ✓ | | Gips-Zement-Steinwollplatten, Eternit, GFK, CFK, HPL, Mineral- werkstoffe | Gypsum/Cement fibre boards, Rockwool, Eternit, GRP, CFK, HPL, Mineral material |

ANWENDUNG · APPLICATION

Durch DP (Polykristalliner Diamant) Zähne extrem lange Standzeiten gegenüber Hartmetall-bestückte Kreissägeblätter. Ideal für Zuschnitte sowie Formatschnitte in extrem abrasive, zu hohen Schneidenschleiß führenden Materialien wie: Corian, Trespa, Laminat, MDF, Gips- und Zementgebundene Platten, Steinwollplatten, Heraklith, Eternit.

Speziell hervorragend ebenfalls für Duroplaste wie: Glasfaserverstärkte sowie Kohlefaserverstärkte Kunststoffe (GFK, CFK), Carbon, Aramidfaserkunststoffe (AFK) HP, HPL, PUR.

Weiterhin hervorragend für Fertigschnitte in thermoplastische Vollplatten (Acrylglas, PMMA, Polyäthylen, Polyamid usw.) sowie duroplastische Vollplatten (Schichtstoffe, HPL, Hartpapier, Trespa, Resopal, Multiplex). Weiterhin für Polymergebundene Kunststoffe, Mineralwerkstoffe wie Corian, Noblan, Hi-Macs, Staron, Rausolid usw.

Hervorragend ebenfalls für Fertigschnitte in beidseitig kunststoffbeschichteten Plattenwerkstoffe, vorzugsweise in Verbindung mit Vorritzer. Ideal auch zum Schneiden von Kunststoff-Profilen.

Due to DP (Polycrystalline Diamond) teeth extremely long tool life compared to carbide tipped circular saws. Excellent for sizing, formatting, cross cuts in extreme abrasive, heavy machining and abrading materials such as: Corian, Trespa, laminates, MDF, gypsum and cement-bonded boards, Rockwool boards, Heraklith products, Eternit.

Also excellent for Duroplastic materials such as: Glas fibre plastic (GFK), Carbon fibre plastic (CFK), Carbon, Aramid fibre plastic (AFK), HP, HPL, PUR.

For finishing cuts in solid thermoplastic boards (PMMA, acrylic glass, polyethylene, polyamide etc.) and solid duroplastic boards (HPL-high-pressure-laminate, HP-Hardpaper, phenolic resin bonded paper, phenolic laminated cotton sheets, Trespa, Resopal, Multiplex). Also for polymer-bound plastics, mineral materials such as Corian, Noblan, Hi-Macs, Staron, Rausolid etc.

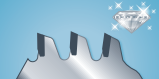

Excellent also for finishing cuts in double-side plastic coated boards, preferably in combination with coring sawblades. Ideal also for cutting plastic profiles.

MASCHINE · MACHINE

Für Handkreissägen, Tauchsägen, Tisch- und Formatkreissägen, Plattenaufteilsägen, Kappsägen, Akkusägen

For portable circular saws, bench- and sizing saws, panel sizing saws, cross-cut saws, cordless saws.

ANWENDUNG · APPLICATION

Durch spezielles Hartmetall/Zahnform ideal für Fertigschnitte in dünnen Platten und Profilmaterial aus harten Kunststoffen (Thermoplaste) wie: PVC, PE, PA, ABS, PS, POM PC, PMMA (Acrylglas). Z.B. Hohlkammerplatten aus PMMA (Acrylglas).

Ebenfalls gut bei abrasiven, zu hohen Schneidenverschleiß führenden Materialien wie: GFK, CFK, Zementplatten, Gipsfaserplatten, Eternit.

Sie wünschen:

- Eine noch höhere Zähnezahl um die Schnittgüte/Standzeit zu verbessern?
 - Durch negativen Spanwinkel verbesserte Kontrolle bei Handvorschub?
 - Durch negativen Spanwinkel höhere Unempfindlichkeit gegen Zahnbruch?
- Siehe Art: 11 1130, Seite 971

Durch dünne Schnittbreite wenig Kraftaufwand und Verschnitt. Daher auch ideal für Akku-Maschinen.

Due to special carbide / tooth geometry excellent for finishing cuts in thin plates and profiles made of hard plastics (thermoplastics) such as: PVC, PE, PA, ABS, PS, POM PC, PMMA e.g. hollow section boards of PMMA (acrylic glass).

Also good for abrasive, heavy machining and abrading materials such as: GFK, CFK, fibre cement panels, gypsum, fibre boards, eternit.

You want:

- Even higher number of teeth to improve the cutting quality/tool life?
 - Due to negative rake angle improves control with manual feed?
 - Due to negative rake angle higher insensitivity to tooth breakage?
- See Art. 11 1130, page 971

Due to thin cutting width little cutting pressure and waste of material. Therefore also ideal for cordless machines.

TFF-P

- > Trapez-Flachzahn (Flachzahn mit Fase)
- > Triple-chip/flat tooth (flat tooth with chamfer on both sides)

ANWENDUNG · APPLICATION

Zum Formatieren von Platten in verschiedenen Dicken, Paketschnitte aus Thermo-
plaste wie: PVC, PE, PA, ABS, PS, POM.

Hervorragend auch zum Schneiden von Kunststoffprofilen sowie für Fertigschnitte in
beidseitig kunststoffbeschichtete Span- und Faserwerkstoffe/Platten vorzugsweise in
Verbindung mit Ritzer.

Durch spezielles Hartmetall auch gut bei abrasiven zu schnellem Schneidenver-
schleiß führenden Verbundstoffen wie faserverstärkte Gipskartonplatten, GFK, CFK.

Ebenfalls ideal für Duroplaste wie HPL Schichtstoff (Trespa, Resopal) und Mineral-
werkstoffe wie Corian, Noblan, Staron usw.

For sizing panels of various thicknesses, cutting stacks made of thermoplastics
such as: PVC, PE, PA, ABS, PS, POM.

Excellent also for cutting plastic profiles and finishing cuts in double-side plastic
coated chip- and hard fibre materials/boards in combination with scoring sawblades.

Due to special carbide teeth also good for cutting abrasive, heavy machining and
abrading materials such as HPL, high-pressure-laminate (Trespa, Resopal) and
mineral materials such as corian, noblan, staron etc.

Schnittgeschwindigkeit in m/s · Cutting speed in m/s

1 Platten · Panels

2 Sicherheitsgrenze · Safety limits

Festlegung der Schnittgeschwindigkeit Vc
 Determination of cutting speed Vc

$$Vc (m/s) = \frac{D \cdot \pi \cdot n}{60 \cdot 1000}$$

Festlegung der Vorschubgeschwindigkeit Vf
 Determination of feed rate Vf

$$Vf (m/min) = \frac{fz \cdot n \cdot Z}{1000}$$

Festlegung der Drehzahl n
 Determination of revolution speed n

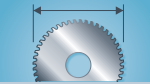

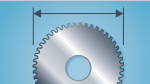

$$n (min^{-1}) = \frac{Vc \cdot 1000 \cdot 60}{D \cdot \pi}$$

- Vc (m/s) = Schnittgeschwindigkeit · Cutting speed
- Vf (m/min) = Vorschubgeschwindigkeit · Feed rate
- fz (mm/z) = Vorschub pro Zahn · Feed per tooth
- D (mm) = Sägendurchmesser · Saw blade diameter
- n (min⁻¹) = Drehzahl · rpm
- Z = Anzahl der Zähne · Number of teeth

Formatieren

Panel sizing

| Art. Ø mm | Type | Anwendung · Application | |
|---|--|---|-----|
| 11 1300 Ø mm 150-800 | Formatieren Universal + Hundegger · Wechselzahn | Gute bis sehr gute Schnittqualität in alle Holzwerkstoffe, Massivholz längs und quer, 1- und 2-seitig Kunststoff/Furnier beschichtete Platten, Leisten, Furniere, Kunststoffe. | 991 |
| | Panel sizing Universal + Hundegger · Alternate top bevel tooth | Good to very good cutting quality in all wooden materials, solid wood along and across the grain, panels and boards 1- and 2 sided plastic coated/veneered, strips and veneer, plastics. | |
| 11 1320 Ø mm 200-500 | Formatieren Universal Plus · Wechselzahn + Achswinkel | Hervorragende und ausrissfreie Schnittqualität in alle Holzwerkstoffe, Massivholz quer, 1- und 2-seitig Kunststoff/Furnier beschichtete Platten, Leisten, Folien, Furniere, Kunststoffe (Thermoplast) | 993 |
| | Panel sizing Universal Plus · Alternate Top Bevel tooth + Axial-Angle | Excellent, tear-free/splinter-free finishing-cut quality in all wooden materials, solid wood across the grain, panels and boards 1- and 2 sided plastic/veneer coated, strips, veneer, foils, plastics (Thermoplastics) | |
| 11 1370 Ø mm 250-350 | Diamant · Formatieren · Fertigschnitt · Harte Kunststoffe · Abrasive Materialien | Durch DP (Polykristalliner Diamant) Zähne extrem lange Standzeit gegenüber Hartmetall-Bestückte Sägen. Ideal für Zuschnitte/ Formatschnitte in abrasive, zu schnellen Schneidenschleiß führenden Materialien. | 995 |
| | Diamond · Panel-sizing · Finishing-cut · Hard Plastics · Abrasive materials | Due to DP (polycrystalline Diamond) teeth extremely long tool life compared to carbide tipped saws. Excellent for sizing, cross cuts in heavy machining and abrading materials. | |
| 11 1425 Ø mm 120-500 | Formatieren Universal · Wechselzahn · Dünnschnitt | Gute bis sehr gute Schnittqualität in alle Holzwerkstoffe, Massivholz längs und quer, 1- und 2-seitig Kunststoff/ Furnier beschichtete Platten, Kunststoffprofile und Platten. Durch dünne Schnittbreite ideal auch für Akkumaschinen und für teure Edelhölzer, Furniere, Leisten da wenig Verschleiß und Schnittdruck/Akkuverbrauch. | 997 |
| | Panel sizing Universal · Alternate Top Bevel tooth · Thin-cut | Good to very good cutting quality in all wooden materials, solid wood along and across the grain, panels and boards 1- and 2 sided plastic coated/veneered, plastic profiles and boards. Due to thin-cut also ideal for battery machines and for cutting expensive precious wood, veneer, strips because of less waste/battery consumption. | |

Panel sizing

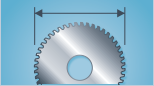

| Art. Ø mm | Type | Anwendung · Application | |
|---|--|--|--|
| 11 1430 Ø mm 120-500  | Formatieren · Harte Kunststoffe · Abrasive Werkstoffe · Fertigschnitt/ Dünnschnitt Panel-sizing · Hard plastics · Abrasive materials · Thin- cut/Finishing-cut | Für Fertigschnitte in dünne Platten-Profil-Leisten aus harten/abrasiven Kunststoffen, GFK, CFK, HPL z.B. Trespa®, Mineralwerkstoffe z.B. Corian®, PMMA, Acrylglas (Plexiglas), Eternit, Gips-Zementfaserplatten, Sandwichmaterialien For finishing cuts in thin boards-profiles-strips of hard/abrasive plastics, GFK, CFK, HPL e.g. Trespa®, mineral material e.g. Corian®, PMMA (Acrylglas-Plexiglass), Eternit®, Fibre cement/Gypsum fibre boards, Sandwichmaterials. | 999  |
| 11 1460 Ø mm 250-400  | Formatieren · Harte + Abrasive Plattenmaterialien · Trapez-Trapezzahn Panel-sizing · Hard + Abrasive Panel Materials · Triple-chip/Triple-Chip tooth | Zum Formatieren von 2-seitig Kunststoff beschichtete/furnierte Platten in verschiedenen Dicken. Hervorragend auch für harten/abrasiven Kunststoffen, GFK, CFK, HPL z.B. Trespa®, Mineralwerkstoffe z.B. Corian®, PMMA, Acrylglas (Plexiglas), Eternit, Gips-Zementfaserplatten, Sandwichmaterialien For sizing 2 sided panels and boards plastic coated/veneered in various thicknesses. Excellent also for hard/abrasive plastics, GFK, CFK, HPL e.g. Trespa®, mineral material e.g. Corian®, PMMA (Acrylglas- Plexiglass), Eternit®, Fibre cement/Gypsum fibre boards, Sandwichmaterials. | 1001  |
| 11 1470 Ø mm 220-400  | Formatieren Universal · Trapez-Flachzahn Panel-sizing Universal · Triple-Chip/Flat tooth | Universalblatt zum Formatieren von 2-seitig Kunststoff beschichtet/fur- nierte Platten in verschiedenen Dicken. Gut auch für harten/abrasiven Kunststoffen, GFK, CFK, HPL z.B. Trespa®, Mineralwerkstoffe z.B. Corian®, PMMA, Acrylglas (Plexiglas), Eternit, Gips-Zementfaserplatten, Sandwichmaterialien. Universal blade for sizing 2 sided panels and boards plastic coated/ veneered in various thicknesses. Excellent also for hard/abrasive plas- tics, GFK, CFK, HPL e.g. Trespa®, mineral material e.g. Corian®, PMMA (Acrylglas-Plexiglass), Eternit®, Fibre cement/Gypsum fibre boards, Sandwichmaterials. | 1003  |
| 11 1600 Ø mm 160-400  | Formatieren · Hohlzahn · Dach-Flach Positiv Panel-sizing · Hollow tooth · Inverted V / Flat tooth positive | Formatieren von 1+2-seitig Kunststoff beschichtet/furnierte Spanplatten/ Möbelplatten in verschiedenen Dicken. Auch ohne Vorritzer gute Unterkante. Panel-sizing 1+2 sided plastic coated/veneered chipboards/furniture boards in various thicknesses. Good lower cutting edge quality even without scorer. | 1005 |

Formatieren

Panel sizing

| Art. Ø mm | Type | Anwendung · Application | |
|--|--|---|------|
| 11 1602 Ø mm 216–350  | Formatieren · Hohlzahn · Dach-Flach Negativ | Formatieren von 1+2-seitig Kunststoff beschichtet/furnierte Spanplatten/Möbelplatten in verschiedenen Dicken. Auch ohne Vorritzer gute Unterkante. Durch negative Zahnform: Ideal auch Kapp- und Gehrungssägen, stabiler und bruchunempfindlicher, besser von Hand zu führen (manueller Vorschub) | 1007 |
| | Panel-sizing · Hollow tooth · Inverted V/Flat tooth negative | Panel-sizing 1+2 sided plastic coated/veneered chipboards/furniture boards in various thicknesses. Good lower cutting edge quality even without scorer. Because of negative tooth shape: Especially also for chop- and mitre saws, more compact and stable, better guiding by hand (manual feed) | |
| 11 1604 Ø mm 220–350  | Formatieren · Hohlzahn · Trapez-Trapez Positiv | Formatieren von 1+2-seitig Kunststoff beschichtet/furnierte Spanplatten/Möbelplatten in verschiedenen Dicken. Auch ohne Vorritzer gute bis sehr gute Unterkante bei harten Oberflächen welche leicht splintern/ausreißen | 1009 |
| | Panel-sizing · Hollow tooth · Triple-Chip/Triple Chip Positive | Panel-sizing 1+2 sided plastic coated/veneered chipboards/furniture boards in various thicknesses. Good to very good lower cutting edge quality even without scorer especially for hard surfaces which splinter/break out easily | |
| 11 1610 Ø mm 160–350  | Formatieren · Wechselzahn Extrem 35° · Positiv | Splinterfreie/Ausrissfreie Feinschnitte bei Massivholz quer, Leisten, Furniere, Profile massiv oder beschichtet/furniert. 1+2-seitig Kunststoff beschichtet/furnierte Spanplatten/Möbelplatten in verschiedenen Dicken. Thermopaste. Auch ohne Vorritzer sehr gute Unterkante. | 1011 |
| | Panel-sizing · Alternate Top Bevel Extreme 35° · Positive | Splinter/tear free finishing cuts in solid wood across the grain, strips, veneer, profiles solid or coated/veneered. 1+2 sided plastic coated/veneered chipboards/furniture boards in various thicknesses. Thermoplastics. Excellent lower cutting edge quality even without scorer. | |
| 11 1615 Ø mm 216–350  | Formatieren · Wechselzahn Extrem 35° · Negativ | Splinterfreie / Ausrissfreie Feinschnitte bei Massivholz quer, Leisten, Furniere, Profile massiv oder beschichtet/furniert. 1+2-seitig Kunststoff beschichtet/furnierte Spanplatten/Möbelplatten in verschiedenen Dicken. Thermopaste. Auch ohne Vorritzer sehr gute Unterkante. Durch negative Zahnform: Ideal auch Kapp- und Gehrungssägen, stabiler und bruchunempfindlicher, besser von Hand zu führen (manueller Vorschub) | 1013 |
| | Panel-sizing · Alternate Top Bevel Extreme 35° · Negative | Splinter/tear free finishing cuts in solid wood across the grain, strips, veneer, profiles solid or coated/veneered. 1+2 sided plastic coated/veneered chipboards/furniture boards in various thicknesses. Thermoplastics. Excellent lower cutting edge quality even without scorer. Because of negative tooth shape: Especially also for chop- and mitre saws, more compact and stable, better guiding by hand (manual feed). | |

ANWENDUNG · APPLICATION

Geringere Zähnezahlen: Gute Schnittqualität in alle Holzwerkstoffe, Massivholz längs und quer, Plattenwerkstoffe einseitig furniert oder beschichtet, Hartgewebe, Hartpapiere sowie für dickere Kunststoffplatten/Profile (Thermoplast).

Höhere Zähnezahlen: Sehr gute Schnittqualität in alle Holzwerkstoffe, Massivholz vorzugsweise quer, Plattenwerkstoffe zweiseitig furniert oder beschichtet (ggf. Vorritzer verwenden), Hartgewebe, Hartpapier, Leisten und Furnier, Kunststoff (Thermoplaste, Duroplaste).

Für exzellente Schnittgüte aller Holzwerkstoffe massiv sowie Platten beschichtet/furniert auch auf der Unterseite ohne Vorritzer siehe Art. 11 1320 Seite 993.

Ebenfalls exzellente, nahezu glatte und ausrissfreie/splitterfreie Schnittgüte zu einem attraktiven Preis siehe Artikel 11 1610 auf Seite 1010.

Lower number of teeth: Good cutting quality in all wooden materials, solid wood across and along the grain, panels and boards one-sided plastic coated/veneered, paper-based laminate, thicker plastic boards/profiles (thermoplastics).

Higher number of teeth: Very good cutting quality in all wooden materials, solid wood across and along the grain, panels and boards two-sided plastic coated/veneered (if applicable with scorer), paper-based laminate, strips and veneer, plastics (thermoplastics, duroplastics)

For excellent cutting in all wooden materials, solid wood an panels/boards two-sided plastic coated/veneered (also without using scorer) see art. 11 1320 page 993.

Also excellent smooth and tear free/splinter free cutting surface for a attractive price see article 11 1610 on page 1010.

ANWENDUNG · APPLICATION

Formatieren von Holzwerkstoffen in hervorragender Fertigschnittqualität. **Ausriss-freies** Sägen von beschichteten Holzwerkstoffen auch mit sehr dicken Deckschichten, Massivholz quer, Kunststoffprofile, kunststoffummantelte Leisten, furnierte oder folienummantelte Türzagen...

Panel sizing/trimming of wood-based material in excellent finishing-cut quality. **Splinter-free** sawing of laminated wood-based material including material with very thick top layers, solid wood across the grain, plastic profiles, synthetically coated ledges, veneered or foil-sheathed door frames...

Ritzer nicht erforderlich

Arbeiten mit Sägewelle **unter** dem Werkstück
Working with spindle **under** the panel

Durch den positiven Spanwinkel wirkt der Schnittdruck über dem Werkstück auf die stabile Tischauflage.
Due to the positive cutting angle acts the cutting pressure above the panel into the stable saw table.

| ✓ | | Kunststoffe, Plexiglas, Duro- und Thermoplaste | Plastics, plexiglass, acrylics, duro- and thermoplastics |

ANWENDUNG · APPLICATION

Durch DP (Polykristalliner Diamant) Zähne extrem lange Standzeiten gegenüber Hartmetall-bestückte Kreissägeblätter. Ideal für Zuschnitte sowie Formatschnitte in extrem abrasive, zu hohen Schneidenschleiß führenden Materialien wie: Corian, Trespa, Laminat, MDF, Gips- und Zementgebundene Platten, Steinwollplatten, Heraklith, Eternit.

Speziell hervorragend ebenfalls für Duroplaste wie: Glasfaserverstärkte sowie Kohlefaser verstärkte Kunststoffe (GFK, CFK), Carbon, Aramidfaserkunststoffe (AFK) HP, HPL, PUR.

Weiterhin hervorragend für Fertigschnitte in thermoplastische Vollplatten (Acrylglas, PMMA, Polyäthylen, Polyamid usw.) sowie duroplastische Vollplatten (Schichtstoffe, HPL, Hartpapier, Trespa, Resopal, Multiplex). Weiterhin für Polymergebundene Kunststoffe, Mineralwerkstoffe wie Corian, Noblan, Hi-Macs, Staron, Rausolid usw.

Hervorragend ebenfalls für Fertigschnitte in beidseitig kunststoffbeschichteten Plattenwerkstoffe, vorzugsweise in Verbindung mit Vorritzer. Ideal auch zum Schneiden von Kunststoff-Profilen.

Due to DP (Polycrystalline Diamond) teeth extremely long tool life compared to carbide tipped circular saws. Excellent for sizing, formatting, cross cuts in extreme abrasive, heavy machining and abrading materials such as: Corian, Trespa, laminates, MDF, gypsum and cement-bonded boards, Rockwool boards, Heraklith products, Eternit.

Also excellent for Duroplastic materials such as: Glas fibre plastic (GFK), Carbon fibre plastic (CFK), Carbon, Aramid fibre plastic (AFK), HP, HPL, PUR.

For finishing cuts in solid thermoplastic boards (PMMA, acrylic glass, polyethylene, polyamide etc.) and solid duroplastic boards (HPL-high-pressure-laminate, HP-Hardpaper, phenolic resin bonded paper, phenolic laminated cotton sheets, Trespa, Resopal, Multiplex). Also for polymer-bound plastics, mineral materials such as Corian, Noblan, Hi-Macs, Staron, Rausolid etc.

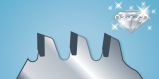

Excellent also for finishing cuts in double-side plastic coated boards, preferably in combination with coring sawblades. Ideal also for cutting plastic profiles.

Special price / sale article. While stocks last.

UNI = 2-7-42 + 2-9-46,40 + 2-10-60

Bei Kunststoff/Melamin beschichtete Plattenwerkstoffe Vorritzen empfohlen. Ritzer siehe Seite 983/1037. Sägen von beschichteten/furnierten Plattenwerkstoffe ohne Vorritzer siehe Seite 935, 1005, 1007, 1009, 1011, 1012

For plastic coated/melamine boards scoring recommended. Scorer see page 983/1037. Cutting of coated/veneered boards without scorer see page 935, 1005, 1007, 1009, 1011, 1012

ANWENDUNG · APPLICATION

Durch dünne Schnittbreite ideal auch für Akkumaschinen und für teure Edelhölzer, Furniere und Leisten da wenig Verschnitt und Schnittdruck/Akkuverbrauch.

Niedere Zähnezahl: Grobe bis mittlere Schnittqualität in alle Holzwerkstoffe, Edelhölzer und Massivholz längs und quer, Plattenwerkstoffe einseitig furniert oder Kunststoff beschichtet, Hartgewebe, Hartpapier, dickere Kunststoffprofile und Platten (Thermoplaste) hoher Vorschub möglich.

Mittlere Zähnezahl: Gute Schnittqualität in alle Holzwerkstoffe, Edelhölzer, Massivholz und Leisten längs und quer, Plattenwerkstoffe einseitig/zweiseitig furniert oder Kunststoff beschichtet, Hartgewebe, Hartpapier, Furnier und Furnierpakete sowie Kunststoffprofile und Platten (Thermoplaste, Duroplaste).

Hohe Zähnezahl: Sehr gute Schnittqualität in alle Holzwerkstoffe, Edelhölzer, Massivholz und Leisten vorzugsweise Querschnitte. Plattenwerkstoffe zweiseitig furniert oder Kunststoff beschichtet, Hartgewebe, Hartpapier, Furnier und Furnierpakete sowie Kunststoffprofile und Platten (Thermoplaste, Duroplaste).

Durch spezielles Hartmetall sehr gut zum Sägen harter Thermoplaste wie z.B. dünne Platten, Hohlkammerplatten aus PC (Polycarbonat), PMMA (Acrylglas-Plexiglas) Siehe hierzu auch Artikel 11 1430 Seite 943

Due to thin-cut also ideal for battery machines and for cutting expensive precious wood, veneer, strips because of less waste/battery consumption.

Low number of teeth: Coarse to medium cutting quality in all wooden materials, precious wood and solid wood across and along the grain, panel and boards one-side plastic coated/veneered, paper-based laminate, thicker plastic profiles and plates (Thermoplastics). High feed rate possible

Medium number of teeth: Good cutting quality in all wooden materials, precious wood, solid wood and strips across and along the grain, panel and boards one-side/two side plastic coated/veneered, paper-based laminate, veneer and veneer packages, plastic profiles/plates (Thermoplastics, Duroplastics)

High number of teeth: Very good cutting quality in all wooden materials, precious wood, solid wood and strips preferably across the grain, panel and boards two side plastic coated/veneered, paper-based laminate, veneer and veneer packages, plastic profiles/plates (Thermoplastics, Duroplastics)

Due to special carbide also excellent for cutting hard thermoplastics such as thin panels, hollow section boards made of PC (Polycarbonate), PMMA (Acrylic-glass/Plexiglass). See here also article 11 1430, page 943

MASCHINE · MACHINE

Für Handkreissägen, Tauchsägen, Tisch- und Formatkreissägen, Plattenaufteilsägen, Kappsägen, Akkusägen

For portable circular saws, bench- and sizing saws, panel sizing saws, cross-cut saws, cordless saws.

ANWENDUNG · APPLICATION

Durch spezielles Hartmetall/Zahnform ideal für Fertigschnitte in dünnen Platten und Profilmaterial aus harten Kunststoffen (Thermoplaste) wie: PVC, PE, PA, ABS, PS, POM PC, PMMA (Acrylglas). z.B. Hohlkammerplatten aus PMMA (Acrylglas).

Ebenfalls gut bei abrasiven, zu hohen Schneidenverschleiß führenden Materialien wie: GFK, CFK, Zementplatten, Gipsfaserplatten, Eternit.

Sie wünschen:

- Eine noch höhere Zähnezahl um die Schnittgüte/Standzeit zu verbessern?
 - Durch negativen Spanwinkel verbesserte Kontrolle bei Handvorschub?
 - Durch negativen Spanwinkel höhere Unempfindlichkeit gegen Zahnbruch?
- Siehe Art: 11 1130, Seite 971

Durch dünne Schnittbreite wenig Kraftaufwand und Verschnitt. Daher auch ideal für Akku-Maschinen.

Due to special carbide / tooth geometry excellent for finishing cuts in thin plates and profiles made of hard plastics (thermoplastics) such as: PVC, PE, PA, ABS, PS, POM PC, PMMA e.g. hollow section boards of PMMA (acrylic glass).

Also good for abrasive, heavy machining and abrading materials such as: GFK, CFK, fibre cement panels, gypsum, fibre boards, eternit.

You want:

- Even higher number of teeth to improve the cutting quality/tool life?
 - Due to negative rake angle improves control with manual feed?
 - Due to negative rake angle higher insensitivity to tooth breakage?
- See Art. 11 1130, page 971

Due to thin cutting width little cutting pressure and waste of material. Therefore also ideal for cordless machines.

- > Trapez-Flachzahn (Flachzahn mit Fase)
- > Triple-chip/flat tooth (flat tooth with chamfer on both sides)

MASCHINE · MACHINE

Für Formatkreissägen, Plattensägen, Tischkreissägen

For sizing saws, panel saws, bench saws

ANWENDUNG · APPLICATION

Zum Formatieren von Platten in verschiedenen Dicken, Paketschnitte aus Thermo-
plaste wie: PVC, PE, PA, ABS, PS, POM.

Hervorragend auch zum Schneiden von Kunststoffprofilen sowie für Fertigschnitte
in beidseitig kunststoffbeschichtete Span- und Faserwerkstoffe/Platten vorzugs-
weise in Verbindung mit Ritzer.

Durch spezielles Hartmetall auch gut bei abrasiven zu schnellem Schneidenver-
schleiß führenden Verbundstoffen wie faserverstärkte Gipskartonplatten, GFK, CFK.

Ebenfalls ideal für Duroplaste wie HPL Schichtstoff (Trespa, Resopal) und Mineral-
werkstoffe wie Corian, Noblan, Staron usw.

For sizing panels of various thicknesses, cutting stacks made of thermoplastics
such as: PVC, PE, PA, ABS, PS, POM.

Excellent also for cutting plastic profiles and finishing cuts in double-side
plastic coated chip- and hard fibre materials/boards in combination with scoring
sawblades.

Due to special carbide teeth also good for cutting abrasive, heavy machining and
abrading materials such as HPL, high-pressure-laminate (Trespa, Resopal) and
mineral materials such as corian, noblan, staron etc.

ANWENDUNG · APPLICATION

Für Fertigschnitte in thermoplastische Vollplatten (Acrylglas, PMMA, Polyäthylen, Polyamid usw.) sowie duroplastische Vollplatten (Schichtstoffe, HPL, Hartpapier, Trespa, Resopal, Multiplex).

Weiterhin für polymergebundene Kunststoffe, Mineralwerkstoffe wie Corian, Noblan, Hi-Macs, Staron, Rausolid usw.

Hervorragend ebenfalls für Fertigschnitte in beidseitig kunststoffbeschichteten Plattenwerkstoffe, vorzugsweise in Verbindung mit Vorritzer.

Ideal auch zum Schneiden von Kunststoff-Profilen.

For finishing cuts in solid thermoplastic boards (PMMA, acrylic glass, polyethylene, polyamide etc.) and solid duroplastic boards (HPL-high-pressure-laminate, HP-Hardpaper, phenolic resin bonded paper, phenolic laminated cotton sheets, Trespa, Resopal, Multiplex).

Also for polymer-bound plastics, mineral materials such as: Corian, Noblan, Hi-Macs, Staron, Rausolid etc.

Excellent also for finishing cuts in double-side plastic coated boards, preferably in combination with coring sawblades.

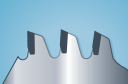

Ideal also for cutting plastic profiles.

ANWENDUNG · APPLICATION

Für Formatschnitte in beidseitig beschichtete Spanplatten (Polyester, Thermoplaste). Belegte Möbelplatten (Furnier, Kunststoff).

Vorteile der negativen Zahnform:

- Das Blatt ist besser von Hand zu führen (manueller Vorschub) und wird nicht in das Schnittgut gezogen.
- Daher ideal auch für Kapp- und Gehrungssägen sowie vertikale Plattenaufteilsägen.
- Kompakter und somit stabiler und bruchunempfindlicher.

Gute Unterkante auch ohne Ritz-Kreissägeblätter.

Für sehr gute Unterkante ohne Ritz-Kreissägeblätter siehe Artikel 11 1320, Seite 993

For panel sizing two-sided coated chipboards (polyester, thermoplastic). Covered furniture boards (veneer, plastic).

Advantages of the negative tooth shape:

- Due to the negative tooth shape easy guiding by hand (manual feed).
- The blade is not pulled into the material to be cut.
- Therefore excellent for chop- and mitre saws, vertical panel-sizing machines.
- Compact and thus more stable and shatter-insensitive.

Good cutting quality of the lower edge even without scoring blade.

For very good cutting quality of the lower edge without scoring blade see article 11 1320, page 993

Panel-sizing machines for example from STRIEBIG, HOLZ-HER. Circular bench saws for example from ALTENDORF, MARTIN. Sizing machines, portable machines.

ANWENDUNG · APPLICATION

Für Formatschnitte in beidseitig beschichtete Spanplatten (Polyester, Thermoplaste) Holzwerkstoffe wie Spanplatten, Hartfaserplatten. Belegte Möbelplatten (Furnier, Kunststoff). Thermoplaste.

Vorteile der Trapez-Trapez Verzahnung:

- Da jeder Zahn gleichmäßig im Eingriff ist ergeben sich höhere Standzeiten und bessere Schnittqualität als Hohlzahn Dach-Flach Blätter.
- Durch dünne Schnittbreite weniger Verschnitt.
- Ideal für harte Oberflächen welche leicht splintern / ausreißen.
- Gut zum Trennen harter Thermoplaste, PMMA (Plexiglas), PA, PE, PS, POM usw. bis ca. 10 mm.

Gute bis sehr gute Unterkante auch ohne Ritz-Kreissägeblätter.

Für sehr gute Unterkante auch ohne Ritz-Kreissägeblätter siehe Artikel 11 1320, Seite 993

For panel sizing two-sided coated chipboards (polyester, thermoplastic) wooden panel material laminated such as chipboards, fibre boards. Covered furniture boards (veneer, plastic). Thermoplastics.

Advantages of the triple-chip / triple-chip tooth:

- Each tooth evenly in engagement results in longer life and cutting quality than inverted V / Flat hollow tooth.
- Because of thin-cut blades less waste.
- Excellent for clean cutting edges in hard surfaces that splinter / break out easily.
- Good also for cutting hard thermoplastics such as PMMA (acrylic glass), PA, PE, PS, POM etc. up to 10 mm.

Good up to very good cutting quality of the lower edge even without scoring blade.

For very good cutting quality of the lower edge even without scoring blade see article 11 1320, page 993

ANWENDUNG · APPLICATION

Für sehr **glatte ausrissfreie** Schnitte bei Massivholz-Querbearbeitung sowie in Massivholzleisten, Kunststoff- und Furnier ummantelte Profile, Leisten und Türzagen.

Splitterfreies schneiden von beidseitig Kunststoff (z.B. Melamin) beschichtete und furnierte Platten.

Hervorragender Schnitt ebenfalls in MDF, Rohe Spanplatten, Leim- und Schicht-hölzer, Sperrholz, Kunststoffprofile und Leisten, Furniere und Profileleisten, harte Thermoplaste bis ca. 30 mm.

Sehr gute Unterkante auch ohne Ritz-Kreissägeblätter.

Weitere Blätter mit guter bis sehr guter Unterkante auch ohne Ritz-Kreissägeblätter siehe Artikel 11 1320, Seite 993

For very **smooth and tear free / splinter free** cutting in solid wood across the grain and profiles, ledges and door frames of wooden material in plastic coated / foil sheathed / veneered.

Tear-free / splinter free cutting of two-sided plastic coated (for example melamine faced) or veneered chipboards, hard fibre boards.

Excellent also for MDF, plywood, glued laminate, veneers and beading, plastic profiles, hard thermoplastics up to 30 mm.

Very good cutting quality of the lower edge even without scoring blade.

Further blades with good and very good cutting quality of the lower edge without scoring blade see article 11 1320, page 993

Arbeiten mit Sägewelle **unter** dem Werkstück
Working with spindle **under** the panel

Durch den positiven Spanwinkel wirkt der Schnittdruck über dem Werkstück auf die stabile Tischauflege.
Due to the positive cutting angle acts the cutting pressure above the panel into the stable saw table.

ANWENDUNG · APPLICATION

Für sehr **glatte ausrissfreie** Schnitte bei Massivholz-Querbearbeitung sowie in Massivholzleisten, Kunststoff- und Furnier ummantelte Profile, Leisten und Türzagen.

Splinterfreies schneiden von beidseitig Kunststoff (z.B. Melamin) beschichtete und furnierte Platten.

Hervorragender Schnitt ebenfalls in MDF, Rohe Spanplatten, Leim- und Schicht-hölzer, Sperrholz, Kunststoffprofile und Leisten, Furniere und Profilleisten, harte Thermoplaste bis ca. 30 mm.

Vorteile der negativen Zahnform:

- Das Blatt ist besser von Hand zu führen (manueller Vorschub) und wird nicht in das Schnittgut gezogen.
- Daher ideal auch für Kapp- und Gehrungssägen sowie vertikale Plattenaufteilsägen.
- Kompakter und somit stabiler und bruchunempfindlicher.

Sehr gute Unterkante auch ohne Ritz-Kreissägeblätter.

Weitere Blätter mit guter bis sehr guter Unterkante auch ohne Ritz-Kreissägeblätter siehe Artikel 11 1320, Seite 993

For very **smooth and tear free / splinter free** cutting in solid wood across the grain and profiles, ledges and door frames of wooden material in plastic coated / foil sheathed / veneered.

Tear-free / splinter free cutting of two-sided plastic coated (for example melamine faced) or veneered chipboards, hard fibre boards.

Excellent also for MDF, plywood, glued laminate, veneers and beading, plastic profiles, hard thermoplastics up to 30 mm.

Advantages of the negative tooth shape:

- Due to the negative tooth shape easy guiding by hand (manual feed).
- The blade is not pulled into the material to be cut.
- Therefore excellent for chop- and mitre saws, vertical panel-sizing machines.
- Compact and thus more stable and shatter-insensitive.

Very good cutting quality of the lower edge even without scoring blade.

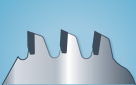

Further blades with good and very good cutting quality of the lower edge without scoring blade see article 11 1320, page 993

Schnittgeschwindigkeit in m/s · Cutting speed in m/s

① Massivholz · Solid wood

② Sicherheitsgrenze · Safety limits

Vc (m/s) = Schnittgeschwindigkeit · Cutting speed

Vf (m/min) = Vorschubgeschwindigkeit · Feed rate

fz (mm/z) = Vorschub pro Zahn · Feed per tooth

D (mm) = Sägendurchmesser · Saw blade diameter

n (min⁻¹) = Drehzahl · rpm

Z = Anzahl der Zähne · Number of teeth

Festlegung der Schnittgeschwindigkeit Vc
 Determination of cutting speed Vc

$$Vc (m/s) = \frac{D \cdot \pi \cdot n}{60 \cdot 1000}$$

Festlegung der Vorschubgeschwindigkeit Vf
 Determination of feed rate Vf

$$Vf (m/min) = \frac{fz \cdot n \cdot Z}{1000}$$

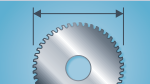

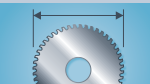

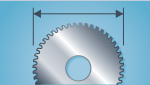

Festlegung der Drehzahl n
 Determination of revolution speed n

$$n (min^{-1}) = \frac{Vc \cdot 1000 \cdot 60}{D \cdot \pi}$$

ANWENDUNG · APPLICATION

Für grobe und schnelle Zuschnitte in weich- und mittelharten Hölzern sowie Naturhölzern wie sie in Tischlereien und Zimmereigeschäften verwendet werden. Vorzugsweise für Längsschnitte. (Querschnitte ebenfalls möglich)

For rough and quick cuts in soft and medium hard wood, as well as in natural wood, like that used in joiner's workshops and carpentry businesses. Particularly suitable for longitudinal cuts. (Cross cuts are also possible).

ANWENDUNG · APPLICATION

Das ideale und preiswerte Blatt zum Erreichen hoher Schnitttiefen dank großem Zahnüberstand. Für grobe, schnelle und tiefe Zuschnitte in weich- und mittelharten Hölzern. Trocken bis naturfeucht. Flachzahn (FLA) Ausführung vorzugsweise für Langsschnitte.

The ideal and inexpensive blade for reaching greater cutting depths thanks to the enlarged projection of the tooth. For rough, quick and deep cuts in soft and medium hard wood. Dry to natural moisture. Flat tooth (FLA) design preferably for cuts along the grain.

ANWENDUNG · APPLICATION

Geringere Zähnezahlen: Gute Schnittqualität in alle Holzwerkstoffe, Massivholz längs und quer, Plattenwerkstoffe einseitig furniert oder beschichtet, Hartgewebe, Hartpapiere sowie für dickere Kunststoffplatten/Profile (Thermoplast).

Höhere Zähnezahlen: Sehr gute Schnittqualität in alle Holzwerkstoffe, Massivholz vorzugsweise quer, Plattenwerkstoffe zweiseitig furniert oder beschichtet (ggf. Vorritzer verwenden), Hartgewebe, Hartpapier, Leisten und Furnier, Kunststoff (Thermoplaste, Duroplaste).

Für exzellente Schnittgüte aller Holzwerkstoffe massiv sowie Platten beschichtet/furniert auch auf der Unterseite ohne Vorritzer siehe Art. 11 1320 Seite 993.

Ebenfalls exzellente, nahezu glatte und ausrissfreie/splitterfreie Schnittgüte zu einem attraktiven Preis siehe Artikel 11 1610 auf Seite 1010.

Lower number of teeth: Good cutting quality in all wooden materials, solid wood across and along the grain, panels and boards one-sided plastic coated/veneered, paper-based laminate, thicker plastic boards/profiles (thermoplastics).

Higher number of teeth: Very good cutting quality in all wooden materials, solid wood across and along the grain, panels and boards two-sided plastic coated/veneered (if applicable with scorer), paper-based laminate, strips and veneer, plastics (thermoplastics, duroplastics)

For excellent cutting in all wooden materials, solid wood an panels/boards two-sided plastic coated/veneered (also without using scorer) see art. 11 1320 page 993.

Also excellent smooth and tear free/splinter free cutting surface for a attractive price see article 11 1610 on page 1010.

MASCHINE · MACHINE

Plattenaufteilsägen vertikal, Formatkreissägen, Doppelgehrungssägen, mechanische Kappsägemaschinen, Unterflurkappsägemaschinen, CNC-Bearbeitungszentren.

Vertical panel sizing saws, trimming saws, double mitre saws, mechanical chop saws, under frame mounted chop saws, machining centers with saw aggregate.

ANWENDUNG · APPLICATION

Formatieren von Holzwerkstoffen in hervorragender Fertigschnittqualität. **Ausriss-freies** Sägen von beschichteten Holzwerkstoffen auch mit sehr dicken Deckschichten, Massivholz quer, Kunststoffprofile, kunststoffummantelte Leisten, furnierte oder folienummantelte Türzagen...

Panel sizing/trimming of wood-based material in excellent finishing-cut quality. **Splinter-free** sawing of laminated wood-based material including material with very thick top layers, solid wood across the grain, plastic profiles, synthetically coated ledges, veneered or foil-sheathed door frames...

Ritzer nicht erforderlich

Scorer not required

Arbeiten mit Sägewelle **unter** dem Werkstück
Working with spindle **under** the panel

Durch den positiven Spanwinkel wirkt der Schnittdruck über dem Werkstück auf die stabile Tischauflage.
Due to the positive cutting angle acts the cutting pressure above the panel into the stable saw table.

ANWENDUNG · APPLICATION

Durch dünne Schnittbreite ideal auch für Akkumaschinen und für teure Edelhölzer, Furniere und Leisten da wenig Verschnitt und Schnittdruck/Akkuverbrauch.

Niedere Zähnezahl: Grobe bis mittlere Schnittqualität in alle Holzwerkstoffe, Edelhölzer und Massivholz längs und quer, Plattenwerkstoffe einseitig furniert oder Kunststoff beschichtet, Hartgewebe, Hartpapier, dickere Kunststoffprofile und Platten (Thermoplaste) Hoher Vorschub möglich.

Mittlere Zähnezahl: Gute Schnittqualität in alle Holzwerkstoffe, Edelhölzer, Massivholz und Leisten längs und quer, Plattenwerkstoffe einseitig/zweiseitig furniert oder Kunststoff beschichtet, Hartgewebe, Hartpapier, Furnier und Furnierpakete sowie Kunststoffprofile und Platten (Thermoplaste, Duroplaste).

Hohe Zähnezahl: Sehr gute Schnittqualität in alle Holzwerkstoffe, Edelhölzer, Massivholz und Leisten vorzugsweise Querschnitte. Plattenwerkstoffe zweiseitig furniert oder Kunststoff beschichtet, Hartgewebe, Hartpapier, Furnier und Furnierpakete sowie Kunststoffprofile und Platten (Thermoplaste, Duroplaste).

Durch spezielles Hartmetall sehr gut zum Sägen harter Thermoplaste wie z.B. dünne Platten, Hohlkammerplatten aus PC (Polycarbonat), PMMA (Acrylglas-Plexiglas) Siehe hierzu auch Artikel 11 1430 Seite 999

Due to thin-cut also ideal for battery machines and for cutting expensive precious wood, veneer, strips because of less waste/battery consumption.

Low number of teeth: Coarse to medium cutting quality in all wooden materials, precious wood and solid wood across and along the grain, panel and boards one-side plastic coated/veneered, paper-based laminate, thicker plastic profiles and plates (Thermoplastics). High feed rate possible

Medium number of teeth: Good cutting quality in all wooden materials, precious wood, solid wood and strips across and along the grain, panel and boards one-side/two side plastic coated/veneered, paper-based laminate, veneer and veneer packages, plastic profiles/plates (Thermoplastics, Duroplastics)

High number of teeth: Very good cutting quality in all wooden materials, precious wood, solid wood and strips preferably across the grain, panel and boards two side plastic coated/veneered, paper-based laminate, veneer and veneer packages, plastic profiles/plates (Thermoplastics, Duroplastics)

Due to special carbide also excellent for cutting hard thermoplastics such as thin panels, hollow section boards made of PC (Polycarbonate), PMMA (Acrylic-glass/Plexiglass). See here also article 11 1430, page 999

ANWENDUNG · APPLICATION

Für Querschnitte in Weich- und Hartholz, Holzmischwerkstoffe, Leimholz, Schichtholz, Plattenwerkstoffe furniert oder beschichtet.

Durch spezielles Hartmetall auch hervorragend für Kunststoffe wie kunststoffbeschichtete Profile, dünnes Acrylglas, Duroplast-Profil und Leisten (hohe Zähnezahl wählen) geeignet.

Ebenfalls für harte Thermoplaste wie PA, PE, PS, POM, ABS.

Durch die negative Zahnform ist das Sägeblatt besser von Hand zu führen und wird nicht in das Schnittgut gezogen.

For cross cuts in soft and hard wood, wooden materials, glued wood, plywood, veneered or coated boards.

Due to special carbide also excellent for plastics such as: plastic laminated profiles, thin acrylic glass, duroplast profiles and strips (high number of teeth recommended).

Also for hard thermoplastics such as PA, PE, PS, POM, ABS.

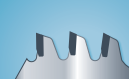

Due to the negative tooth shape, that saw blade can be guided easier by hand and is not pulled into the material to be cut.

Handkreissägen + Lamello
Portable circular saws + Lamello

WZ

> Wechselzahn
> Alternate top bevel

MASCHINE · MACHINE

Für Handkreissägen, Tauchsägen, Tischkreissägen, Kappkreissägen.

For portable circular saws, table saws, bench saws, cross-cut saws.

Lamello-Nebenlöcher **NL 2 / 4,5 / 30 + NL 4 / 5 / 36** gesenkt 90°, mit Bohrung 22,00 mm

Pin holes Lamello **NL 2 / 4,5 / 30 + NL 4 / 5 / 36** countersunk 90°, with bore 22,00 mm

ANWENDUNG · APPLICATION

Niedere Zähnezahl: Holz, Leimholz, Spanplatten roh.

Mittlere Zähnezahl für: Holz, Leimholz, Tischplatten, Spanplatten roh, Spanplatten einseitig beschichtet / furniert.

Hohe Zähnezahl für: Spanplatten roh, Spanplatten 1- und 2-seitig beschichtet / furniert.

Kunststoffe, Thermoplaste.

Low number of teeth: Wood, laminated wood, coarse chipboard.

Average number of teeth for: Wood, laminated wood, tabletops, coarse chipboard, chipboard with coating / veneer on one side.

High number of teeth for: Coarse chipboard, chipboard that is coated/veneered on 1 and 2 sides.

Plastics, thermoplastics.

Festlegung der Schnittgeschwindigkeit Vc
Determination of cutting speed Vc

$$Vc \text{ (m/min)} = \frac{D \cdot \pi \cdot n}{1000}$$

Festlegung der Vorschubgeschwindigkeit Vf
Determination of feed rate Vf

$$Vf \text{ (mm/min)} = fz \cdot n \cdot Z$$

Festlegung der Drehzahl n
Determination of revolution speed n

$$n \text{ (min}^{-1}\text{)} = \frac{Vc \cdot 1000}{D \cdot \pi}$$

fz (mm/z) = Vorschub pro Zahn · Feed per tooth
D (mm) = Sägendurchmesser · Saw blade diameter
Z = Anzahl der Zähne · Number of teeth
n (min⁻¹) = Drehzahl · rpm

Dampfbehandelt
Steam treated

ANWENDUNG · APPLICATION

Stahl
Steel
< 800 N

Siehe ab Seite 1053
See from page 1053

Für Stähle ≤ 800 N/mm²

HSS-DMo5: Hochlegierter Schnellarbeitsstahl mit Wolfram-, Vanadium- und Molybdänanteil für:

- Sehr gute mechanische Eigenschaften und hervorragende Festigkeit mit einer Härte von 64 ± 1HRC.

"Dampfbehandelt" ist eine kontrollierte Oxydierung CO₂ der Oberfläche durch Anlassen der fertigen Kreissägen in erhitztem Dampf bei ca. 350 °C. Dies ergibt:

- Feine Mikroporen zur besseren Verteilung des Kühlmittels.
- Oberflächenhärte von 900 HV.
- Außergewöhnlich feine Oberflächenschicht welche die Reibung extrem verringert (Reibungskoeffizient 0,60).

Reduzierter Seitenschlag auf Anfrage

For steels ≤ 800 N/mm²

HSS-DMo5: High-speed steel which includes vanadium, wolfram and Molybdenum. This results to:

- Very good mechanical characteristics and excellent strength with a hardness of 64 ± 1HRC.

"Steam treated" is a surface modification by CO₂ oxidation. Circular saws are let to tempering in overheated steam of arround 350 °C. This results to:

- Microporosity arised on surface enables better coolant distribution
- Surface hardness of 900 HV.
- Extremely fine surface layer decreases the friction (antifriction). Coefficient friction 0,60.

Für Stähle/Edelstähle ≤ 800 N/mm²
Aluminium, Kupfer, Messing

HSS-DMo5: Hochlegierter Schnellarbeitsstahl mit Wolfram-, Vanadium- und Molybdänanteil für:
– Sehr gute mechanische Eigenschaften und hervorragende Festigkeit mit einer Härte von 64 ± 1HRC.

Kx Beschichtung: Ergibt generell weitaus höhere Standzeiten als Dampf-behandelte Blätter (siehe Art. 5 1000).

Weiterhin:
– Gute Widerstandsfähigkeit bei hohen Bearbeitungstemperaturen. Daher geeignet auch bei ungenügender Kühlung, Minimalschmierung, Sprühnebelschmierung.
– Durch geringen Reibungskoeffizient (0,45) und hoher Oberflächenhärte von 3500 HV sind höhere Schnittgeschwindigkeiten möglich. Daher ideal für automatische Maschinen.

For steel/stainless steel ≤ 800 N/mm²
Aluminum, copper, brass

HSS-DMo5: High-speed steel which includes vanadium, wolfram and Molybdenum. This results to:
– Very good mechanical characteristics and excellent strength with a hardness of 64 ± 1HRC.

Kx coating: Provides much longer tool life than steam treated blades (see Art. 5 1000).

Furthermore:
– High resistance in high work temperatures. Therefore ideal also in cuts with insufficient cooling, minimal cooling, spray oil (mist).
– Due to low friction coefficient (0,45) and high surface hardness of 3500 HV suitable for higher cutting speed. Therefore ideal for automatic machines.

| < 1200 N | | |

Siehe ab Seite 1053
See from page 1053

Für Stähle/Edelstähle ≤ 1200 N/mm²
Guss, Bronze, Zinklegierungen, Inconel

HSS-Co5: Hochlegierter Schnellarbeitsstahl mit Wolfram-, Molybdän- und Kobaltanteile. Kobalt verhindert das Kornwachstum bei hohen Betriebstemperaturen. Dadurch behält der Stahl seine Härte. Diese Eigenschaften sind erforderlich wenn **harte** und **hochlegierte** Werkstoffe wie z.B. Edelstahl geschnitten werden sollen, welche im Schneidbereich hohe Temperaturen erzeugen.

Härte des Stahls: 65 ± 1HRC.

“**Dampfbehandelt**” ist eine kontrollierte Oxydierung CO₂ der Oberfläche durch Anlassen der fertigen Kreissägen in erhitztem Dampf bei ca. 350 °C. Dies ergibt:

- Feine Mikroporen zur besseren Verteilung des Kühlmittels.
- Oberflächenhärte von 900 HV.

For steel/stainless steel ≤ 1200 N/mm²
Cast iron, bronze, zinc alloy, inconel

HSS-Co5: Strongly alloyed high speed steel with content of wolfram, molybdenum and **cobalt**. Cobalt obstructs critical grain growth and above all, maintains an excellent degree of hardness at high operating temperatures. These characteristics are very important when cutting very high-alloy materials such as stainless steel and very hard metals, which tend to develop high temperatures in the cutting zone.

Hardness of this steel: 65 ± 1HRC.

“**Steam treated**” is a surface modification by CO₂ oxidation. Circular saws are let to tempering in overheated steam of around 350 °C. This results to:

- Microporosity arised on surface enables better coolant distribution
- Surface hardness of 900 HV.
- Extremely fine surface layer decreases the friction (antifriction). Coefficient friction 0,60.

See from page 1053

Für Stähle/Edelstähle ≤ 1200 N/mm²
Guss, Bronze, Zinklegierungen, Inconel

HSS-Co5: Hochlegierter Schnellarbeitsstahl mit Wolfram-, Molybdän- und **Kobaltanteile**. Kobalt verhindert das Kornwachstum bei hohen Betriebstemperaturen. Dadurch behält der Stahl seine Härte. Diese Eigenschaften sind erforderlich wenn **harte** und **hochlegierte** Werkstoffe wie z.B. Edelstahl geschnitten werden sollen, welche im Schneidbereich hohe Temperaturen erzeugen.

Härte des Stahls: 65 ± 1HRC.

Kx Beschichtung: Ergibt generell weitaus höhere Standzeiten als Dampfbehandelte Blätter (siehe Art. 5 1300).

Weiterhin:

- Gute Widerstandsfähigkeit bei hohen Bearbeitungstemperaturen. Daher geeignet auch bei ungenügender Kühlung, Minimalschmierung, Sprühnebelschmierung.
- Durch geringen Reibungskoeffizient (0,50) und hoher Oberflächenhärte von 3500 HV sind höhere Schnittgeschwindigkeiten möglich. Daher ideal für automatische Maschinen.

For steel/stainless steel ≤ 1200 N/mm²
Cast iron, bronze, zinc alloy, inconel

HSS-Co5: Strongly alloyed high speed steel with content of wolfram, molybdenum and **cobalt**. Cobalt obstructs critical grain growth and above all, maintains an excellent degree of hardness at high operating temperatures. These characteristics are very important when cutting very high-alloy materials such as stainless steel and very hard metals, which tend to develop high temperatures in the cutting zone.

Hardness of this steel: 65 ± 1HRC.

Kx coating: Provides much longer tool life than steam treated blades (see Art. 5 1300).

Furthermore:

- High resistance in high work temperatures. Therefore ideal also in cuts with insufficient cooling, minimal cooling, spray oil (mist).
- Due to low friction coefficient (0,50) and high surface hardness of 3500 HV suitable for higher cutting speed. Therefore ideal for automatic machines.

Preis und Lieferzeit auf Anfrage

HSS-DMo5: Hochlegierter Schnellarbeitsstahl mit Wolfram-, Vanadium- und Molybdänanteil für:

- Sehr gute mechanische Eigenschaften und hervorragende Festigkeit mit einer Härte von 64 ± 1HRC.

Kx Beschichtung: Ergibt generell weitaus höhere Standzeiten als Dampf-behandelte Blätter (siehe Art. 5 1000).

Weiterhin:

- Gute Widerstandsfähigkeit bei hohen Bearbeitungstemperaturen. Daher geeignet auch bei ungenügender Kühlung, Minimalschmierung, Sprühnebelschmierung.
- Durch geringen Reibungskoeffizient (0,45) und hoher Oberflächenhärte von 3500 HV sind höhere Schnittgeschwindigkeiten möglich. Daher Ideal für automatische Maschinen.

Best cutting geometry for cutting pipes, profiles made of steel/stainless steel ≤ 800 N/mm² and made of aluminum, copper, brass

Price and time of delivery on request

HSS-DMo5: High-speed steel which includes vanadium, wolfram and Molybdenum. This results to:

- Very good mechanical characteristics and excellent strength with a hardness of 64 ± 1HRC.

Kx coating: Provides much longer tool life than steam treated blades (see Art. 5 1000).

Furthermore:

- High resistance in high work temperatures. Therefore ideal also in cuts with insufficient cooling, minimal cooling, spray oil (mist).
- Due to low friction coefficient (0,45) and high surface hardness of 3500 HV suitable for higher cutting speed. Therefore ideal for automatic machines.

| > 1000 N | | | | | | | | |

Vollhartmetall-Kreissägeblätter sollten nur auf stabilen und schwingungsarmen Maschinen eingesetzt werden (vorzugsweise Fräsmaschinen). Die Kreissägeblätter müssen zwischen exact planlaufenden, möglichst großen Spannflanschen fest eingespannt werden (Aufnahmealter siehe Seite 1080). Seitendruck sowie der einsatz auf Maschinen mit Handvorschub sind zu vermeiden. Für die Stahlzerspanung wird eine besonders fette Kühlung empfohlen. Unzureichende Kühlung führt zu vorzeitigem Werkzeugverschleiß, zur Rissbildung und zum Werkzeugbruch. Bei der Zerspanung von NE-Metallen kann auch eine Sprühnebelschmierung eingesetzt werden. Grauguss und Kunststoffe sind trocken zu Zerspanen. Wird dies beachtet kann die Schnittgeschwindigkeit gegenüber HSS-DIN Kreissägeblättern bis zum 4-fachen gesteigert werden.

Full carbide circular saw blades should only be used on stable and low-vibration machines (preferably milling machines). The circular saw blades must be firmly clamped between precisely evenly running clamping flanges that are as large as possible (receptacle holders, see page 1080). Lateral pressure and use on machines with manual infeed must be avoided. For steel machining, particularly fast cooling is recommended. Insufficient cooling will lead to premature tool wear, crack formation and tool break. When chipping NF metals, spray mist lubrication can be used. Cast iron and plastics must be machined dry. If this is observed, the cutting speed as compared to the HSS-DIN circular saw blades can be increased up to four-fold.

5 6000

Ähnlich DIN 1837 Blätter kommen mit feingezahnten Zähnen.

Hauptanwendungsgebiet:

- Feine Schlitz- und Trennarbeiten (Feinmechanik, Schmuckindustrie).
- Ideal auch zum Schlitzten von Schrauben.
- Zum Trennen/Schlitzten von dünnwandigen Profilen und kurzspanenden Werkstücken aus Edelstahl, Stahl, Guss, Nichteisenmetalle, Kunststoffe.

Maximal empfohlene Schnitttiefe ca. 3 mm

- Somit generell nur für geringe Bearbeitungstiefen oder kurze Schlitzlängen.
- Vorschub pro Zahn: 0,005-0,05 je nach Werkstoff, dicke und Gesamtstarrheit (genauere Daten siehe Tabelle nächste Seite).

Similar DIN 1837 blades comes with fine teeth.

Main field of application:

- This shape is mostly used for fine slotting and cutting works (micro-mechanics and jewellery).
- Excellent also for screw slotting.
- For cutting and slotting thin walled profiles and short chipping work pieces made of stainless steel, steel, cast iron, non ferrous metals, plastics.

Maximum recommended cutting depth approx. 3 mm

- So basically for low machining depths or short slots.
- Feed per tooth: 0,005-0,05 according to material, thickness and global rigidity (more precise data see next page).

5 6001

Ähnlich DIN 1838 Blätter kommen mit grobgezahnten Zähnen.

Hauptanwendungsgebiet:

- Die am meisten verwendete Universalverzahnung für Schlitz- und Trennarbeiten von dickwandigen Profilen / Vollmaterial **ab ca. 3 mm**.
- Generell für Arbeiten an langspanenden Werkstücken aus Edelstahl, Stahl, Guss, Nichteisenmetalle.
- Somit generell nur für große Bearbeitungstiefen oder große Schlitzlängen.
- Vorschub pro Zahn: 0,01-0,1 je nach Werkstoff, dicke und Gesamtstarrheit (genauere Daten siehe Tabelle nächste Seite).

Similar DIN 1838 blades comes with rough teeth.

Main field of application:

- The most widely used universal toothing for slotting and cutting thick walled profiles and solid material **from 3 mm**.
- In general for cutting long chipping work pieces made of stainless steel, steel, cast iron, non ferrous metals.
- So basically for deep machining depths or long slots
- Feed per tooth: 0,01-0,1 according to material, thickness and global rigidity (more precise data see next page).

Im Idealfall sollten immer 2-3 Zähne im Einsatz sein
Ideally 2-3 teeth in contact

Richtwerte für den Einsatz von Vollhartmetall-Kreissägeblättern nach DIN

*O = Schneidöl / cutting oil
*E = Emulsion
*A = Trocken (Pressluft), air

Verwenden Sie ein gutes Schneidöl; siehe ab Seite 1144
Use good cutting oil; see from page 1144

Festlegung der Schnittgeschwindigkeit V_c
Determination of cutting speed V_c

$$V_c \text{ (m/min)} = \frac{D \cdot \pi \cdot n}{1000}$$

Festlegung der Vorschubgeschwindigkeit V_f
Determination of feed rate V_f

$$V_f \text{ (mm/min)} = f_z \cdot n \cdot Z$$

Festlegung der Drehzahl n
Determination of revolution speed n

$$n \text{ (min}^{-1}\text{)} = \frac{V_c \cdot 1000}{D \cdot \pi}$$

f_z (mm/z) = Vorschub pro Zahn · Feed per tooth
 D (mm) = Sägendurchmesser · Saw blade diameter
 Z = Anzahl der Zähne · Number of teeth
 n (min⁻¹) = Drehzahl · rpm

Karnasch® VOLLHARTMETALL-KREISSÄGEBLÄTTER NACH DIN SOLID CARBIDE METAL CIRCULAR SAW BLADES ACCORDING DIN

5 5000

DIN 1837A Blätter kommen mit feingezahnten Winkelzähnen.

Hauptanwendungsgebiet:

- Feine Schlitz- und Trennarbeiten (Feinmechanik, Schmuckindustrie).
- Ideal auch zum Schlitzten von Schrauben.
- Zum Trennen/Schlitzten von dünnwandigen Profilen und kurzspanenden Werkstücken aus Stahl, Guss, Nichteisenmetalle, Kunststoffe.

Maximal empfohlene Schnitttiefe ca. 3 mm

DIN 1837A blades comes with fine teeth and tooth shape form A.

Main field of application:

- This shape is mostly used for fine slotting and cutting works (micro-mechanics and jewellery).
- Excellent also for screw slotting.
- For cutting and slotting thin walled profiles and short chipping work pieces made of steel, cast iron, non ferrous metals, plastics.

Maximum recommended cutting depth approx. 3 mm

5 5001

DIN 1838B Blätter kommen mit grobgezahnten Bogenzähnen.

Hauptanwendungsgebiet:

- Die am meisten verwendete Universalverzahnung für Schlitz- und Trennarbeiten von dickwandigen Profilen / Vollmaterial **ab ca. 3 mm**.
- Generell für Arbeiten an langspanenden Werkstücken aus Stahl, Guss, Nichteisenmetalle.

DIN 1838B blades comes with rough teeth and tooth form B.

Main field of application:

- The most widely used universal toothing for slotting and cutting thick walled profiles and solid material **from 3 mm**.
- In general for cutting long chipping work pieces made of steel, cast iron, non ferrous metals.

5 5002

DIN 1838C Blätter kommen je nach Durchmesser mit grobgezahnten Bogenzähnen wechselseitig angefast (Zahnform BW) oder mit Vor- und Nachschneider (Zahnform C).

Diese Zahnformen reduzieren die Schnittkräfte und erlauben hierdurch eine deutlich erhöhte Zerspanleistung gegenüber DIN 1838B

Hauptanwendungsgebiet:

- Für Schlitz- und Trennarbeiten von dick bis sehr dickwandigen Profilen ab ca. 3 mm.
- Speziell hervorragend für Vollmaterial **ab ca. 3 mm**.
- Generell für Arbeiten an langspanenden Werkstücken aus Stahl, Guss, Nichteisenmetalle.

DIN 1838C blades comes with rough teeth and tooth form B additionally, depending on the diameter, alternative top beveled (tooth shape BW) or with precut and finishing cut tooth (tooth shape C).

This tooth forms reduce cutting forces and thus allow a significantly increased cutting performance compared to DIN 1838B

Main field of application:

- For slotting and cutting thick, up to very thick profiles from 3 mm.
- Especially excellent for cutting solid material **from 3 mm**.
- In general for slotting and cutting long chipping work pieces made of steel, cast iron, non ferrous metals.

ANWENDUNG · APPLICATION

| | | | | |
|--|---|---|---|---|
|  |  |  |  |  |
| Stahl Steel | Grauguss Grey cast iron | Alu Alu | Kupfer, Kupfer- legierungen Copper, copper alloys | Zinklegierung Zinc alloy |
| < 800 N | | | | |

Metallkreissägeblätter nach DIN 1840, Typ N sind grundsätzlich für mittelharte Metalle, Stähle bis zu 800 N/mm² anwendbar. Für besonders harte und zähe Werkstoffe empfehlen wir Typ "H" (Preis und Lieferzeit auf Anfrage). Für besonders weiche und zähe Werkstoffe empfehlen wir Typ "W" (Preis und Lieferzeit auf Anfrage).

Metal-circular saw blades according DIN 1840, type N are for medium hard metals and steels up to 800 N/mm². For particularly tough and hard and tough materials we recommend type "H" (Price and delivery time on request). For very soft and tough materials we recommend type "W" (Price and delivery time on request).

Richtwerte für den Einsatz HSS-DIN 1840 Typ "N" Kreissägeblätter
Recommended cutting data for HSS-DIN 1840 Typ "N" circular saws

| Werkstoffe Materials | | V _c (m/min) Schnittgeschwindigkeit Cutting speed | f _z (mm/z) Vorschub pro Zahn Feed per tooth |

Festlegung der Schnittgeschwindigkeit V_c
Determination of cutting speed V_c

$$V_c \text{ (m/min)} = \frac{D \cdot \pi \cdot n}{1000}$$

- f_z (mm/z) = Vorschub pro Zahn · Feed per tooth
- D (mm) = Sägendurchmesser · Saw blade diameter
- Z = Anzahl der Zähne · Number of teeth
- n (min⁻¹) = Drehzahl · rpm

Festlegung der Vorschubgeschwindigkeit V_f
Determination of feed rate V_f

$$V_f \text{ (mm/min)} = f_z \cdot n \cdot Z$$

Festlegung der Drehzahl n
Determination of revolution speed n

$$n \text{ (min}^{-1}\text{)} = \frac{V_c \cdot 1000}{D \cdot \pi}$$

Orbitale Rohrkreissägeblätter für: Georg Fischer (GF), Axxair, Orbitalum
Orbital pipe cutting circular saw blades for: Georg Fischer (GF), Axxair, Orbitalum

5 3990

HSS-Co5 Cobalt + **Kx beschichtet**: Zum Sägen von Rohren aus Edelstahl, Stahl, Ne-Metalle.
Durch **Kx-Beschichtung** werden höchste Standzeiten erreicht (auch bei nicht optimaler Kühlung)

HSS-Co5 Cobalt + **Kx coating**: For cutting pipes made of stainless steel, steel, non ferrous metals.
By **Kx coating** excellent tool life (even at sub-optimal cooling)

| Art. | Passend für Maschine Suitable for machine | | | | | Für Wandstärken For pipe thickness | € |

 Orbital pipe cutting circular saw blades for: Georg Fischer (GF), Axxair, Protém, Orbitalum

5 3965

Kreissägeblatt **Cermet (Keramik)** bestückt für **höchste Standzeit**. Zum Sägen von Rohren aus **Edelstahl, säurebeständigem Stahl, Stahl, Kupfer, Aluminium und Kunststoff**

Circular saw blades **Cermet (Ceramic)** tipped for **maximum tool life**. For cutting pipes made of **stainless steel, acid-resistant steel, steel, copper, aluminum and plastic**

Orbitale Rohrkreissägeblätter für: Georg Fischer (GF), Orbitalum, Exact, Rothenberger Pipecut Turbo
Orbital pipe cutting circular saw blades for: Georg Fischer (GF), Orbitalum, Exact, Rothenberger Pipecut Turbo

5 3960 CERMET

Kreissägeblatt **Cermet (Keramik)** bestückt für **höchste Standzeit**. Ideal zum Sägen von Rohren aus **Stahl und Edelstahl**. Auch geeignet zum Sägen von **Aluminium, Kupfer und Kunststoff**. Speziell für Kunststoff empfehlen wir Artikelgruppe 5 3951 (siehe Seite 1079). Speziell für Aluminium und Kupfer empfehlen wir Artikelgruppe 5 3952 (siehe Seite 1079)

Circular saw blade **Cermet (Ceramic)** tipped for **maximum tool life**. Ideal for cutting pipes made of **steel and stainless steel**. Also suitable for **aluminum, copper and plastic**. Especially for plastic we suggest our article group 5 3951 (see page 1079). Especially for aluminum and copper we suggest article group 5 3952 (see page 1079).

| Art. | Passend für Maschine Suitable for machine | | | | | € |

5 3961 CERMET DÜNNSCNITT AKKU / CERMET THIN-CUT BATTERY

Kreissägeblatt **Cermet (Keramik)** bestückt **Dünnschnitt** vorzugsweise für **Akkumaschinen**. Durch dünne Schnittbreite weniger Kraftaufwand, geringerer Verschleiß und längere Akkulaufzeit. Zum Sägen von Rohren aus **Stahl, Edelstahl, Aluminium, Kupfer und Kunststoff**.

Circular saw blade **Cermet (Ceramic)** tipped **thin-cut** preferably for **battery tools**. Due to the small cutting width less cutting pressure, less cutting waste and longer battery life. For cutting pipes made of **steel, stainless steel, aluminum, copper and plastic**.

| Art. | Passend für Maschine Suitable for machine | | | | | € |
|----------------|--|-------|---------|----|--------|-------|
| 5 3961 140 010 | Exact PC 170 Battery | • 140 | 1,4/1,2 | 62 | 46 WWF | 67,55 |

5 3950 HARTMETALL-BESTÜCKT / CARBIDE TIPPED

Kreissägeblatt **Hartmetall-bestückt** zum Sägen von Rohren aus **Stahl**. Auch geeignet zum Sägen von **Aluminium, Kupfer und Kunststoff**. Speziell für Kunststoff empfehlen wir Artikelgruppe 5 3951 (siehe Seite 1079). Speziell für Aluminium und Kupfer empfehlen wir Artikelgruppe 5 3952 (siehe Seite 1079)

Carbide tipped circular saw blade for cutting pipes made of **steel**. Also suitable for **aluminum, copper and plastic**. Especially for plastic we suggest our article group 5 3951 (see page 1079). Especially for aluminum and copper we suggest article group 5 3952 (see page 1079).

KA 35 SILVER-MAG · TWIN SLIDE

BESCHREIBUNG · SPECIFICATION

- 1** BLACKDUR gehärteter Schlitten. Daher mehr als 5× höhere Lebensdauer des Schienenführsystems gegenüber konventionellen Schwalbenschwanzführungen.

BLACKDUR hardened sliding rail. This results to more than 5 times longer lifetime than conventional dovetail slides.
- 2** Doppeltes-Schienenführsystem. Die Motorhöhe ist damit verstellbar. Je nach Anforderung kann der Hub somit bis auf 210 mm erweitert werden. Weiterhin kann die gewünschte Motorhöhe/Hub fixiert werden. Unabsichtliches verstellen und somit Bruch des Bohrers wird somit vermieden.

Two-way sliding rails, which make the motor height be adjustable according to the different requirement. Stroke up to 210 mm. Rail position function, which can make the motor stop at any position to prevent selfrig decline and damage cutter.
- 3** Interne „Selbstschmierfunktion“ erhöht wesentlich die Lebensdauer des Getriebes.

Design of internal self-lubricating function ensures extended life of the gear.
- 4** Die Lufteinlässe sind so konstruiert das keine Flüssigkeiten oder Schmutz in den Motor gelangen können.

Tilt protection design for motor air inlet avoid liquid or debris falling into the inside of he motor.
- 5** Automatisches inneres Kühlsystem. Der externe Kühlring ist so gestaltet, dass Kühlflüssigkeit nicht in das Getriebe gelangen kann.

Automatic internal cooling system. The external cooling ring design prevents cooling liquid overflow into the gear box.
- 6** Ergonomisch konstruierte Griffe für hervorragende Kontrolle der Drehbewegung.

Ergonomically designed handles for excellent control of the rotary movement.
- 7** Offener Griff. Optimal für leichte Maschinen. Die Maschine ist mühelos auf der zu bohrenden Oberfläche zu verschieben. Leicht zu tragen. Ergonomisch.

Open handle. Ideal for light machines. The machine can be moved easily on the surface.
- 8** Schwerpunktmäßig optimal positionierte Bohrungen im Aluminiumguss zum Befestigen des Sicherungsseiles. Maschinen welche an Wänden/Decken magnetisch befestigt werden sollten unbedingt gesichert werden.

Design of overall aerial lifting holes and safety rope holes guarantee double protection for the safety of the aerial personal and equipment.
- 9** Die Konstruktion des gesamten Bohrständers ist auf eine hohe Steifigkeit zur Verbesserung der Bohrqualität ausgelegt.

The design of the entire body is designed for high rigidity to improve drilling quality.
- 10** Die Magnet-Standflächen kommen in einem Verschleißreduzierten Design. Die Standflächen der Magnete erhalten hierdurch eine wesentlich längere Lebensdauer. Die Magnethaltekraft beträgt bis zu 10 000 N / 1000 kg für zuverlässiges und sicheres Bohren.

Magnetic bottom wear design, which reduces the wear of the magnet bottom and extend service life. Magnetic base with maximum magnetic adhesion up to 10 000 N ensure the safety and reliability during drilling operations.

Index

1

Dies fängt beim Wichtigsten an: DEM MOTOR. Eibenstock Motoren zu 100% MADE IN GERMANY sind und bleiben die beste Wahl, wenn es um leistungsstarke Motoren mit hohem Drehmoment und geringer Wartung geht.

This starts with the most important, THE MOTOR. Eibenstock motors 100% Made in Germany are and will remain the best choice when it comes to performance and reliability, motors with high torque and low maintenance.

2

Dies geht weiter mit der Führung. Unser „HEAVY-DUTY“ Schienenführungssystem (**PATENTIERT**) ist den gängigen Schwalbenschwanzführungen an Stabilität und Präzision bei Weitem überlegen.

This goes on with the slide. Our "HEAVY-DUTY" Twin Rail Slide System (**PATENTED**) is by far superior to standard dovetail slides in the points of stability and precision.

3

Das Herz unserer Magnet-Kernbohrmaschinen: Robuste Elektronik-Schalteneinheiten. Verwechslungsfreie und ergonomisch richtige Anordnung der Schalter POWER und Magnethaltekraft. Eingebaute Sicherheits-Elektronikeinheiten erlauben den Motorstart nur bei eingeschaltetem Magnet.

MAG-TEC SENSOR: Der Sensor erkennt wie gut der Magnet die Maschine am Untergrund hält. Er ist direkt mit dem Motor verbunden. Leuchtet der Sensor „ROT“ ist der Untergrund verunreinigt (Rost, Lackreste, Späne), das Material dünner als 6 mm oder der Vorschub beim Bohren ist zu hoch. Die Maschine hat somit keinen sicheren Stand. Der Motor wird nicht starten oder schaltet sich ab. Leuchtet der Sensor „GRÜN“ ist die Magnethaltekraft optimal und die Nutzung der Maschine ist sicher.

The heart of our magnetic hole cutting machines robust electronic switching units with ergonomically designed switch panels. Controlled by Hightech P.C.B Electronic circuitry built with safety in mind. We have interlocking systems ensuring that magnet must be energized before motor can be started. This high-tech P.C.B control system is common to all models.

MAG-TEC SENSOR: The sensor detects how well the magnet keeps the machine on the ground. It is directly connected to the engine. If the sensor is illuminating "RED", the ground is dirty (rust, varnish residues, chips), the material is thinner than 6 mm or the feed rate is too high. The machine does not have a safe stand. The engine does not start or turns off. If the sensor is illuminating "GREEN", the magnetic holding force is optimal and the use of the machine is safe.

4

Alle Maschinen sind mit einem Stabilisator ausgestattet für noch mehr Haltekraft.

All models of machines are equipped with a rear stabilizer for even more holding power and stability.

5

Abnehmbarer, magnetbestückter Kühlmitteltank ebenfalls für externe Befestigung. Kühlmittel mit Schnellwechsel-Schlauchsystem und Kühlmittel-Feinjustierung. Durchdacht und praktisch.

Removable coolant tank for external mounting with magnetic clip supplied. Coolant tank with quick release hose system and coolant fine adjustment. Well thought out and practical.

6

Konsequent "NUR DAS BESTE"

7

8

9

Index

Kompakte und robuste Gehäuse aus solidem Aluminiumguss.
Bei Platzproblemen ist das komplette Drehkreuz/Griff abnehmbar und auf die andere Seite innerhalb von Sekunden montierbar.
Für KA 38, KA 40, KAS 40, KA 50, KAS 50, KATV 55, KATSV 55

Compact and robust main body housing made of high grade cast aluminum.
In case of place problems, the complete handle can be removed and mounted on the other side within seconds.
For KA 38, KA 40, KAS 40, KA 50, KAS 50, KATV 55, KATSV 55

Ergonomische 2-fach Griffe zum „ausbalancierten“ Halten / Befestigen der Maschine.

Ergonomic designed two way handle for perfect balance when handling and positioning machine.

Alle Maschinen mit automatischer Kühlmittelzufuhr / Weldon 19 mm (3/4") oder Weldon 32 mm (1.1/4").

All machines equipped with automatic internal coolant supply through 19 mm (3/4") Weldon or 32 mm (1.1/4") Weldon arbors.

Konsequent nur die besten Transport/Aufbewahrungsboxen. Alle Maschinen kommen in hochbelastbaren, staub- und wasserdicht versiegelten Boxen. Idealer Schutz der Maschinen im harten Einsatz.

Consistently only the best transport/storage boxes. All machines supplied in heavy-Duty, dust and waterproof sealed boxes with internal protective lining. Ideal protection of machines in tough conditions.

Fast alle Modelle erhältlich mit 360° drehbarem Fuß. Bei größeren Modellen ist der Fuß zusätzlich bis zu 22 / 16 mm vor und zurück verschiebbar. Das ergibt größtmögliche Flexibilität bei der Positionierung der Maschine.

- A. Maschine aufsetzen
- B. Mit Magnet sichern
- C. Nachträglich punktgenau positionieren

Almost all models available with swivel base 360 degrees and larger models with additional 16 mm or 22 mm forward/back sliding and lock, for maximum flexibility when positioning the machine.

- A. Place the machine
- B. Secure with magnet
- C. Subsequently positioned precisely and locked ready to drill

Consistently "ONLY THE BEST"

HEAVY-DUTY

SCHIENENFÜHRUNGSSYSTEM · TWIN RAIL SLIDE SYSTEM

Neues System "HEAVY-DUTY" Vorteile gegenüber Maschinen mit veralteter Schwalbenschwanzführung.

- Bis zu 10-fach höhere Stabilität
- Extrem enge Führungstoleranzen durch die runden Schienen
- Der Führungsblock hat keinen direkten Kontakt zum Maschinenkorpus sondern wird ausschließlich durch das hochpräzise und stabile runde Schienensystem geführt.
 - Dadurch weniger Reibung und Verschleiß
 - Geringere Wartungskosten und höhere Zuverlässigkeit

Daraus resultiert:

- Höhere Standzeit der Bohrer
- Weniger Bruch der Bohrer
- Genauere Bohrtoleranzen
- Bessere Oberfläche der Bohrungen
- Bis zu 110 mm Schnitttiefe möglich, auch bei kleinen Kernbohrmaschinen

Advantages of New Twin Rail Slide System "HEAVY-DUTY" over machines with old dovetail system.

- Up to 10 times better stability.
- Extremely tight tolerances of the slide through the round Twin Rail system.
- The slide has no contact with the main body of the machine. The whole construction is connected only by the highly precise and extremely stable rail system.
 - Reduced friction / less wear
 - Low maintenance / better reliability

Result:

- Improved cutter life
- Reduced cutter breakage
- Improved hole tolerances
- Improved hole surface quality
- Up to 110 mm cutting depth possible already with small machines

Altes System Schwalbenschwanzführung
Old dove tail system

Index

Die Maschinen werden sofort einsatzbereit geliefert. Komplett mit allen nötigen Werkzeugen und Zusatzteilen.

The machines are delivered instantly ready to use. Complete with all necessary tools and additional parts.

Werkzeuge und Zusatzteile: Alle notwendigen Werkzeuge, Späneschutz, Keil, Sicherheitskette, Kühlmittelflasche mit Magnethalter.

Tools and additional parts: Safety chain/carabina, coolant bottle with fixing bracket and magnetic holder.

Konsequent "NUR DAS BESTE" an Maschinen benötigt konsequent "NUR DAS BESTE" an Transportkästen. Alle Maschinen kommen in hochbelastbaren, staub- und wasserdicht versiegelten Transportkästen. Idealer Schutz der Maschinen im harten Einsatz.

Consistently "ONLY THE BEST" machinery requires only the best available transport boxes. All machines supplied in heavy-duty dust and water proof sealed transport containers with internal protection. Ideal for machines used in tough conditions.

VORWORT:

Bei Karnasch Geradschleifern handelt es sich um rein professionelle Maschinen für den harten Dauereinsatz konzipiert.

- Kompakte, ergonomische Bauform
- Geringes Gewicht
- Technisch ausgereift
- Hohe Leistung im Vergleich zum Gewicht
- Keine Überlastungsgefahr, da bis zum Motorstillstand belastbar
- Kälte- und vibrationsisolierte Gehäuse
- Wartungsarm
- Servicefreundlich (Ersatzmotoren leicht zu wechseln)
- Wirtschaftlich

Zubehör und Ersatzteile siehe Seite 1138-1139

PREFACE:

Karnasch straight grinders are professional machines & are designed for applications ranging from light deburring to heavy grinding

- Compact ergonomic construction
- Light weight
- Technically proven
- High power to weight ratio
- Air motor cannot be overloaded as it will stop if excessive pressure is applied
- Casing insulates from cold & vibration
- Low maintenance
- Easily serviced (spare motors easily replaced)
- Economical

Accessories and spare parts see page 1138-1139

Kein Öl
No oil

WICHTIGSTE DATEN

- Hochgeschwindigkeits-Turbinenmotor
- Hochpräzise Spindellagerung ergibt exzellente Rundlaufgenauigkeit
- Wartungsfreier Motor – keine Schmierung erforderlich
- Kein Ölniederschlag auf dem Werkstück
- Abluft vorne entfernt die Späne
- Leicht, einfache Handhabung
- Kann wie ein Stift gehalten werden
- 100.000 min⁻¹ für sehr feine Oberflächengüte

ANWENDUNGSBEREICHE

Luft- und Raumfahrt · Automobilindustrie · Werkzeug- und Formenbau

EINSATZGEBIETE

Feinfräsen · Schleifen · Gravieren

EMPFOHLENE EINSATZWERKZEUGE

Hartmetall-Frässtifte bis Ø 3 mm · Schleifstifte · Polierstifte

Anwendungsdaten

| | |
|-------------------------------------|---|
| Drehzahl | 100.000 min ⁻¹ |
| Leistung | 40 Watt |
| Spannzange | 3 mm |
| Abluftaustritt | Vorne |
| Ventilausführung | Dreh |
| Gewicht | 0,24 kg |
| Luftverbrauch (m ³ /min) | 0,17 |
| Mitgeliefertes Zubehör | 2 m Zuluftschlauch, Spannzange 3 mm, 2 Spannschlüssel |

KEY POINTS

- High-speed turbine motor
- High-precision spindle bearing ensures high concentricity
- Maintenance free motor – no lubrication required
- No oil deposits on the workpiece
- Front exhaust deflects chips
- Light, easy to handle
- Holds like a pen
- 100.000 ppm gives very fine finish

APPLICATION SECTORS

Aerospace · Automotive · Die and mould

AREAS OF USE

Fine milling · Grinding · Engraving

RECOMMENDED CONSUMABLES

Tungsten carbide burs up to Ø 3 mm · Mounted points · Polishing points

Application

| | |
|---------------------------------|--|
| Speed | 100.000 min ⁻¹ |
| Power | 40 Watt |

- 1 Abnehmbare Spindel um in enger Geometrie zu arbeiten
- 2 Keramiklager sorgt für lange Nutzungsdauer
- 3 Durch verbessertes Motordesign geringe Wartungs- und Reparaturkosten, da der Motor keine Lamellen, Rotoren oder Zylinder enthält
- 4 Für Dauerbetrieb bestens geeignet durch das neu entwickelte Rollen-Drosselventil

WEITERE VORTEILE

- Wird ohne Öl eingesetzt, daher keine Verunreinigung des Werkstücks
- Sehr hohe Drehzahl, optimal für feines entgraten
- Gleichmäßige Materialabnahme
- Durch leichtes und schmales Gehäuse, besserer Zugang und gute Kontrolle
- Kann wie ein Stift gehalten werden
- Abluft hinten mit Schalldämpfung für ruhiges arbeiten auch bei sehr hoher Drehzahl

ANWENDUNGSBEREICHE

Luft- und Raumfahrt · Automobilindustrie · Werkzeug- und Formenbau

EINSATZGEBIETE

Präzisionsentgraten · Feinfräsen

EMPFOHLENE EINSATZWERKZEUGE

Hartmetall-Frässtifte bis Ø 3 mm · Schleifstifte · Polierstifte

KEY POINTS

- 1 Removable collet guard to work in narrow geometries
- 2 Ceramic bearings offers for extended service life
- 3 Through unique motor design low maintenance and repair costs, Motor has no vanes, rotor or cylinder
- 4 Ideal for continuous use through roll throttle

MORE BENEFITS

- Used without oil, no contamination of workpiece
- Very high speed, ideal for fine deburring
- Consistent stock removal
- Through light weight and narrow housing, accommodates improved access, control and spindle protection
- Rear exhaust with overhoser provides quiet operation, also by very high speed

APPLICATION SECTORS

Aerospace · Automotive · Die and mould

AREAS OF USE

For precision deburring and fine grinding

RECOMMENDED CONSUMABLES

Tungsten carbide burrs up to Ø 3 mm · Mounted points · Polishing points

Anwendungsdaten

| | |
|-------------------------------------|---|
| Drehzahl | 100.000 min ⁻¹ |
| Leistung | 63 Watt |

WICHTIGSTE DATEN

- Durch ideale Drehzahl und leistungsstarkem Motor extrem universell einsetzbar.
- Für Schaft 3 und 6 mm Einsatzwerkzeuge
- Robustes Vollstahlmodell
- Leicht, einfache Handhabung
- Kann wie ein Stift gehalten werden
- Abluft hinten mit Schalldämpfung für ruhiges Arbeiten

ANWENDUNGSBEREICHE

Luft- und Raumfahrt · Automobilindustrie · Werkzeug- und Formenbau

EINSATZGEBIETE

Präzisionsentgraten · Feinfräsen · Generell für alle leichten Schleif- und Fräsarbeiten

EMPFOHLENE EINSATZWERKZEUGE

Hartmetall-Frässtifte bis Ø 6 mm · Schleifstifte · Polierstifte

KEY POINTS

- Universally applicable due to the ideal speed and powerful motor
- For consumables shank 3 and 6 mm
- Robust all-steel model
- Light, easy to handle
- Holds like a pen
- Rear exhaust with overhose provides quiet operation

APPLICATION SECTORS

Aerospace · Automotive · Die and mould

AREAS OF USE

For precision deburring and fine grinding · In general for all light milling and grinding works

RECOMMENDED CONSUMABLES

4-5 drops/min. (Oil see page 1139)

WICHTIGSTE DATEN

- Extrem leistungsstarker Motor
- Für schwerste Schleif- und Fräsarbeiten
- Kann ein- und zweihändig bedient werden
- Abluft hinten mit Schalldämpfung für ruhiges Arbeiten

ANWENDUNGSBEREICHE: Luft- und Raumfahrt · Automobilindustrie · Werkzeug- und Formenbau · Schiffbau · Gießereien

EINSATZGEBIETE: Generell für schwerste Schleif- und Fräsarbeiten · Auch an kompliziert geformten/engen Werkstücken dank elastischer Spindel

EMPFOHLENE EINSATZWERKZEUGE: **Speziell hervorragend für Hartmetall-Frässtifte Ø 8-12 mm, da durch flexible Spindel Bruch minimiert wird**

Schleifstifte bis Ø 40 mm mit Breite bis 50 mm · Trennschleifscheiben bis Ø 50 mm · Fächerschleifer bis Ø 30 mm · Schleifhülsen bis Ø 22 mm · Polierstifte · Schleifscheiben bis Ø 50 mm · Trennscheiben bis Ø 50 mm

KEY POINTS

- Extremely powerful motor
- For heavy grinding and milling works
- Can be operated with one hand and two-handed
- Rear exhaust with silencer provides quiet operation

APPLICATION SECTORS: Aerospace · Automotive · Die and mould · Ship building · Foundries · Fabrication

AREAS OF USE: Generally for heavy grinding and milling works · Also on complicated shaped and narrow workpieces thanks to elastic spindle

RECOMMENDED CONSUMABLES: **Specially suited for tungsten carbide burrs Ø 8-12 mm because due to flexible spindle breakage is minimized**

Mounted point heads up to Ø 40 mm, width up to 50 mm · Flap wheels up to Ø 30 mm · Sanding bands up to Ø 22 mm · Polishing points · Grinding Discs up to Ø 50 mm · Cut off Discs up to Ø 50 mm

Anwendungsdaten

Schwenkverbindung · Swivel Connection

Die Schwenkverbindung ist anwendbar für alle Geradschleifer mit einem Schlauchanschluss für ¼" Die Schwenkverbindung ermöglicht durch einen ruhigen Lauf, ein leichteres Arbeiten an schwierigen Stellen und verringert die Belastung. Es entsteht kein Druckverlust da das Werkzeug um 360 Grad schwenkbar ist und um 25 Grad biegsam.

The swivel connection can be used for any horizontal grinders with a hose connection for ¼". The swivel connection permits easier work at difficult angles through smooth operation and reduces stress. No pressure loss arises because the tool can be turned 360 degrees and flexed 25 degrees.

| Art. | Beschreibung · Description | € |

Wartungsgeräte · Maintenance Devices

Wartungseinheiten haben die Aufgabe Feuchtigkeit und schädliche Stoffe zu entfernen und die vom Verdichter kommende Luft aufzubereiten. Somit ist eine Funktionssicherheit und lange Lebensdauer gewährleistet. Weiterhin versorgt ein Öler die Druckluft mit Schmierstoff um Korrosion zu verhindern.

Maintenance units have the task of removing moisture and harmful substances and preparing the air coming from the condenser. This ensures functional safety and a long service life. Furthermore, an oiler supplies the compressed air with lubricant to prevent corrosion.

HOCHLEISTUNGS-KÜHLSCHMIER-KONZENTRAT. SILIKONFREI

Ist in Wasser zu verrühren

Das Öl wird durch ständiges rühren mit Wasser vermischt. (ÖL in Wasser geben). Es entsteht ein hervorragendes und hochergiebiges Universal-Kühlschmier-Öl.

Eigenschaften:

- Mineralisches Öl das im Sinne verkehrsrechtlicher Bestimmung kein Gefahrgut ist
- Rostschützend
- Enthält keine Schwermetalle
- Nitrit- und Chlorfrei

Verwendung:

Erhöht signifikant die Standzeiten und Oberflächengüte beim: SÄGEN, FRÄSEN, GEWINDESCHNEIDEN, REIBEN, BOHREN, DREHEN.

Mischung:

5% Öl in Wasser für Stähle geringer Festigkeit (Baustähle) sowie Ne-Metalle (Alu, Kupfer, Messing)
10% Öl in Wasser geben für hochlegierte Stähle (Edelstähle). Bei schwierigsten Zerspanproblemen den Ölanteil erhöhen oder nur das reine Öl verwenden.

BIO-HOCHLEISTUNGS-MINIMALMENGENSCHMIERÖL FÜR SCHWIERIGE SPANABHEBENDE SOWIE SPANLOSE VERARBEITUNG.

Basisöl auf pflanzliche Produkte aufgebaut (Kokosöl, Rapsöl). Umweltschonend. Chlorfrei.

Verwendung: Zum Sägen, Fräsen, Bohren, Drehen, Reiben und Gewindeschneiden hervorragend geeignet. Ebenfalls für die spanlose Bearbeitung wie Walzen, Tiefziehen, Drahtziehen, Rohrbiegen geeignet.

Anwendung: Besonders geeignet für die Bearbeitung von schwer zerspanbaren Werkstoffen wie rost- und hitzebeständige Stähle, Nickellegierungen, Titan, Stahl, Alu- und Alulegierungen.

Für die Bearbeitung von Kupfer- sowie Bronzelegierungen, Messingguss und Rotguss siehe MECUT-MMKS-MQL / STEEL/ALU/COPPER „EASY-CLEAN“ Art. 601162 + 601163

Einsatzhinweis: Hervorragendes Kühlschmiermittel speziell für Minimalmengen-Kühl-Schmiersysteme entwickelt (auch in Sprayflaschen erhältlich. Siehe hierzu unser Mecutspray Art. 60 1150, Seite 1146)

Eigenschaften:

- sehr hohe Werkzeugstandzeiten
- Verbesserte Oberflächengüte
- Wirkt antikorrosiv
- Biologisch abbaubar (Anlieferungszustand)

MINERALÖLFREIES-HOCHLEISTUNGS-MINIMALMENGENSCHMIERÖL FÜR MITTELSCHWERE SPANABHEBENDE SOWIE SPANLOSE VERARBEITUNG.

Mineralölfrei. Mit Wasser abwaschbar. Keine flüchtigen Chlorwasserstoffe.

Verwendung: Zum Sägen, Fräsen, Bohren, Drehen, Reiben und Gewindeschneiden hervorragend geeignet.

Ebenfalls für Spanlose Bearbeitung wie Walzen, Tiefziehen, Drahtziehen, Rohrbiegen.

Anwendung: Besonders geeignet für die mittelschwere Zerspannung von allen Stählen, Edelstähle (Chrom-Nickel-Legierungen) und NE-Metalle wie Alu, Kupfer, Messing unlegiert oder legiert.

Alle Gussorten wie Stahlguss, Temporguss, Druckguss, Messingguss, Rotguss usw.

Einsatzhinweis: Hervorragendes Kühlschmiermittel mit Schwerpunkt auf die Kühlwirkung. Fertigteile mit Wasser abwaschbar. Für Minimalmengen-Kühl-Schmiersysteme entwickelt.

Eigenschaften:

- Kein Verharzen der Fertigteile. Mit Wasser abwaschbar
- Sehr dünnflüssig dadurch geringer Verbrauch und sehr gute Kühlwirkung
- Pumpenfördermöglich
- Hohe Schnittgeschwindigkeiten möglich, geringer Verschleiß der Werkzeuge

MECUTOIL 100

HIGH PERFORMANCE COOLING LUBRICANT CONCENTRATE. SILICONE FREE

To be mixed in water

The oil is mixed by constant stirring with water. (pour the oil into the water). The result is an excellent and highly productive Universal cutting oil.

Properties:

- Mineral oil that is not hazardous under traffic law provision
- Rust-Protective
- Does not contain heavy metals
- No Nitrite and chlorine

Application:

Increases tool life and surface finish significantly when: SAWING, MILLING, TAPPING, GRINDING, DRILLING.

Mixture:

5% Oil in water for low strength steels (structural steel) and non-ferrous metals (aluminum, copper, brass)
10% Oil in water for high-alloy steels (stainless steels). Increase the oil content for most difficult machining or use only the pure oil.

1

2

3

MECUT-MMKS-MQL / STEEL+ALU

BIO-HIGH-PERFORMANCE-MINIMAL QUANTITY LUBRICATION OIL FOR DIFFICULT CUTTING AND NON CUTTING OPERATIONS.

Basic oil based on vegetable products (coconut oil, rapeseed oil). Environmentally friendly. Chlorine-free.

Use:

Ideal for sawing, milling, drilling, turning, grinding and thread-cutting. Also suitable for non-cutting processing such as rolling, deep drawing, wire drawing, tube bending.

Application:

Particularly suitable for machining difficult materials such as rust and heat resistant steels, nickel alloys, titanium, steel, aluminum and aluminum alloys. For machining copper and bronze alloys, cast brass, gunmetal refer to MECUT-MMKS-MQL / STEEL/ALU/COPPER "EASY-CLEAN" Part No. 601162 + 601163

Instructions for use:

Excellent coolant specially designed for minimum quantity cooling lubrication systems. (Also available in spray bottles. See our Mecutspray Art. 60 1150, page 1146)

Properties:

- very long tool life
- improved surface quality
- anti-corrosive
- Biologically degradable (as delivered)

4

5

6

MECUT-MMKS-MQL STEEL/ALU/COPPER "EASY-CLEAN"

MINERAL OIL FREE HIGH-PERFORMANCE FLUID FOR MINIMUM QUANTITY LUBRICATION FOR MEDIUM DIFFICULT CUTTING AND NON CUTTING OPERATIONS.

Mineral oil free. Washable with water. No volatile hydrogen chloride.

Use:

Ideal for sawing, milling, drilling, turning, grinding and thread-cutting. Also for non-cutting processing such as rolling, deep drawing, wire drawing, tube bending.

Application:

Particularly suitable for medium-heavy duty machining of all steels, stainless steels (chrome-nickel alloys) and non-ferrous metals such as aluminum, copper, brass unalloyed or alloyed. All types of castings such as cast steel, malleable cast iron, die-cast, brass, gunmetal, etc.

Instructions for use:

Excellent coolant with focus on cooling effect. Finished parts washable with water. Designed for minimum volume cooling lubrication systems.

Properties:

- No gumming of the finished parts. Washable with water
- Very low viscosity, thus low consumption and very good cooling effect.
- Pump supply possible
- High cutting speeds possible, minimal tool wear

9

MECUTSPRAY

€ 9,85 **60 1150**

500 ml

MECUTSPRAY BIO-HOCHLEISTUNGS-SCHNEIDÖL FÜR SCHWIERIGE, SPANABHEBENDE VERARBEITUNG. SILIKONFREI

Auf pflanzlichem Rohstoff aufgebaut. Umweltschonendes Sprühöl. Treibgasfrei.

Verwendung: Zum Sägen, Fräsen, Bohren, Drehen, Reiben und Gewindeschneiden hervorragend geeignet.

Vorteile: Mit schmierfördernden Additiven – frei von Mineralölanteilen. Enthält korrosionsschützende Zusätze – alterungsstabil.

Einsatzhinweis: Unmittelbar auf Werkstück/Werkzeug aufbringen. Kurze Zeit einwirken lassen, gegebenenfalls Vorgang wiederholen.

Eigenschaften:

- Sehr hohe Werkzeugstandzeiten
- Verbesserte Oberflächengüte
- Wirkt antikorrosiv
- 100% Wirkstoffgehalt
- Treibgasfrei
- Umweltschonend
- Biologischer Abbau >90%
- Gemäß CEC-L-33-T-82
- Für Minimalschmierung geeignet

Besonders geeignet bei Bearbeitung von schwer zerspanbaren Werkstoffen, wie rost- und hitzebeständige Stähle, Nickellegierungen, Titan, Stahl, Alu- und Alulegierungen.

MECUTFOAM

€ 12,70 **60 1152**

400 ml

MECUT FOAM HOCHLEISTUNGS-SCHAUMSPRAY. SILIKONFREI

- Schaum haftet am Werkzeug
- Kein Tropfen und Umherspritzen

Ideal zum Arbeiten in Zwangslagen wie z.B. „Überkopfeinsatz“ und bei Maschinen ohne Kühlmittleinrichtung.

Eigenschaften:

- Kein Verharzen der Fertigteile. Mit Wasser abwaschbar
- Schwefelfrei
- Mineralölfrei
- sehr gutes Haftvermögen

Verwendung: Erhöht signifikant die Standzeiten und Oberflächengüte beim: SÄGEN, FRÄSEN, GEWINDESCHNEIDEN, REIBEN, BOHREN, DREHEN

Zum Zerspanen aller Stahlsorten sowie Ne-Metalle wie Alu, Kupfer, Messing.

SCHNEIDPASTE

125 g € 6,95 **60 1159**

750 g € 25,45 **60 1157**

750 g

125 g

UNIVERSAL SCHNEIDPASTE CHLORFREI. SILIKONFREI

- Paste haftet am Werkzeug.
- Kein Tropfen und Umherspritzen.

Ideal zum Arbeiten in Zwangslagen wie z.B. „Überkopfeinsatz“ und bei Maschinen ohne Kühlmittleinrichtung.

Verwendung: Erhöht signifikant die Standzeiten und Oberflächengüte beim: SÄGEN, FRÄSEN, GEWINDESCHNEIDEN, REIBEN, BOHREN, DREHEN.

Zum Zerspanen aller Stähle sowie schwierigster Materialien wie Titan-, Mangan-, Stahlguss-, Chrom-Nickel oder Molybdän-Stählen.

Hervorragend auch für alle Nichteisenmetalle wie Alu, Kupfer, Messing.

MECUTSPRAY

MECUTSPRAY BIO-HIGH PERFORMANCE-CUTTING OIL FOR DIFFICULT MACHINING. SILICONE FREE

Only plant-based raw materials. Environmentally friendly spray oil. Propellant-free.

Application: Excellent useable for sawing, milling, drilling, turning, reaming and thread cutting.

Advantages: Lubricating promoting additives – free of mineral oil components contains corrosion protective additives – aging-resistant.

Application reference: Adding immediately onto the workpiece/tool. Let it impact for a short time and possibly repeat the operation.

Properties:

- Very long tool-life
- Improving surface quality
- Anti-corrosive working
- 100% active substance
- Propellant-free
- Environmentally friendly
- Biologically degradable >90%
- According to CEC-L-33-T-82
- Useable for minimum lubrication

Especially useable for cutting difficult materials like acid-, and heat-resistant steels, nickel alloys, titanium, steel, aluminum, aluminum alloys.

1

2

3

MECUTFOAM

MECUT FOAM HIGH PERFORMANCE COOLING LUBRICANT FOAM SPRAY. SILICONE FREE

- The foam sticks to the tool
- No dripping or splashing

Ideal for working under difficult circumstances e.g. "Overhead use" and for machines without cooling device.

Properties:

- No gumming of the finished parts. Washable with water
- Sulfur-free
- Petroleum-Free
- Very good adhesion

Application: Increases tool life and surface finish significantly when: SAWING, MILLING, TAPPING, GRINDING, DRILLING.

For cutting all types of steel and non-ferrous metals like aluminum, copper, brass.

4

5

6

CUTTING PASTE

UNIVERSAL CUTTING PASTE WITHOUT CHLORINE. SILICONE FREE

- The paste sticks to the tool.
- No dripping or splashing

Ideal for working under difficult circumstances e.g. "Overhead use" and for machines without cooling device.

Application: Increases tool life and surface finish significantly when: SAWING, MILLING, TAPPING, GRINDING, DRILLING.

For machining all kind of steels. Also excellent for extremely difficult materials such as titanium-, manganese-, cast steel-, chrome-nickel or molybdenum steels.

Also excellent for all non-ferrous metals such as aluminum, copper, brass.

7

8

9

MECUTWAX

€ 9,55 60 1200

MECUT WAX HOCHLEISTUNGS-KÜHLSCHMIERSTIFT

Silikonfrei

- Wachs haftet am Werkzeug.
- Kein Tropfen und Umherspritzen

Ideal zum Arbeiten in Zwangslagen wie z.B. „Überkopfeinsatz“ und bei Maschinen ohne Kühlmitteleinrichtung.

Verwendung:

Erhöht signifikant die Standzeiten und Oberflächengüte beim:

- SÄGEN
- FRÄSEN
- GEWINDESCHNEIDEN
- REIBEN
- BOHREN
- DREHEN

Zum Zerspanen aller Stahlsorten sowie Ne-Metalle wie Alu, Kupfer, Messing.

350 g

BIO-UNIVERSALREINIGER / ENTFETTER

10 l

€ 215,50 60 1161

5 l

€ 116,20 60 1160

METALLENTFETTUNGS- SOWIE REINIGUNGSKONZENTRAT MIT KORROSIONSSCHUTZ

Verwendung:

- Für die Metallentfettung/Reinigung als Vorbereitung für die Lackierung sowie Pulverbeschichtung.
- Löst hervorragend Korrosionsschutzöle, Fette sowie synthetische und natürliche Wachse.
- Kann in Sprüh-, Tauch- und Pinselverfahren heiß oder kalt eingesetzt werden.
- Hervorragend geeignet auch für Ultraschall-Reinigungsanlagen.

Einsatzhinweis:

Je nach Verunreinigung empfehlen wir eine Verdünnung:

Stärkste Verschmutzung (z.B. Walzfett, Korrosionsschutzöle, Synthetische Öle) = 1:5-1:10

Mittelstarke Verschmutzung = 1:10-1:20

Leichte Verschmutzung = 1:20-1:40

Beim Einsatz mit Hochdruckreinigern (bis 90°) verstärkt sich aufgrund der enthaltenen waschaktiven Substanzen die Reinigungskraft um den Faktor 5.

Nach der Einwirkzeit, die sich nach der Verunreinigung richtet, ist der angelöste Schmutz einfach mit Wasser abzuspülen bzw. abzuspitzen. Je nach Verschmutzungsgrad konzentriert oder bis 40-fach verdünnt anwenden. Nach dem Auftragen einwirken lassen, nötigenfalls mit einem Lappen nachwischen und mit einem scharfen Wasserstrahl absprühen.

Eigenschaften:

- Wesentlich hautfreundlicher als lösemittelhaltige Reiniger
- Korrosionsschützend (wirkt nach der Reinigung einem kurzfristigen Nachrost entgegen).
- Tenside sind biologisch abbaubar gem. EG-Verordnung
- Kostengünstig durch hohe Verdünnbarkeit.
- Demulgierend und ölabscheidgerecht.
- Unterliegt nicht der VOC-Verordnung.

HINWEIS:

Nicht geeignet für Aluminium, eloxierte bzw. verzinkte Flächen.

Aufgrund der Vielzahl an verwendeten Kaltwalzfetten und Korrosionsschutzölen empfehlen wir jedoch in jedem Fall einen Test auf der zu reinigenden Flächen durchzuführen.

10 l

5 l

Für alle angebotenen Schmierstoffe/Schneidöle erhalten Sie auf Anfrage das entsprechende DIN Sicherheitsdatenblatt (DIN 52900).

The corresponding safety data sheet (DIN 52900) for all of the lubricants/cutting oils offered is available on request.

MECUTWAX

MECUT WAX HIGH PERFORMANCE COOLING-LUBRICANT STICK

Silicone free

- The wax sticks to the tool.
- No dripping or splashing

Ideal for working under difficult circumstances e.g. "Overhead use" and for machines without cooling device.

Application:

Increases tool life and surface finish significantly when:

- SAWING
- MILLING
- TAPPING
- GRINDING
- DRILLING
- TURNING

For cutting all types of steel and non-ferrous metals like aluminum, copper, brass.

1

2

3

BIO-UNIVERSAL CLEANER/DEGREASER

METAL DEGREASING AND CLEANING CONCENTRATE WITH CORROSION PROTECTION

Use:

- For metal degreasing / cleaning in preparation for painting and powder coating.
- Removes slushing oils and greases as well as synthetic and natural waxes.
- Can be used hot or cold in spray, dipping and brushing processes.
- Excellent for ultrasonic cleaning systems too.

Instructions for use:

Dilution is recommended depending on the contamination:

Highest contamination (e.g. rolling grease, slushing oils, synthetic oils) = 1:5-1:10

Medium level contamination = 1:10-1:20

Light contamination = 1:20-1:40

When used with high pressure cleaners (up to 90°), cleaning performance increases due to the detergent substances contained by a factor of 5.

After the exposure time, which depends on the contamination, the loosened dirt is easy to rinse or spray off with water. Depending on the degree of contamination use concentrated or diluted up to 40 times. Let it work in after application, if required use a cloth to wipe off and spray off with a high pressure jet.

Properties:

- Much gentler on the skin than solvent-based cleaners
- Corrosion protection (acts after cleaning as short term rust protection).
- Tensides are biodegradable as per EC Regulations
- Cost-effective due to being highly dilutable.
- Demulsifying and suitable for oil separation.
- Not subject to VOC regulations.

NOTE:

Not suitable for aluminum, anodised or galvanised surfaces.

Due to the large number of cold rolling greases and slushing oils used however, we recommend performing a test on the surfaces to be cleaned in all cases.

Die angegebenen Schnittdaten sind eine Empfehlung. Die tatsächlichen Schnittdaten sollten immer an die Bearbeitung und Maschine angepasst werden. Ist die Ihnen zur Verfügung stehende Drehzahl niedriger als die in der Tabelle angegebene, sollte der Vorschub im gleichen Verhältnis reduziert werden.
These conditions are for general guidance; in actual machining conditions adjust the parameters according to your actual machine and work-piece conditions.
If the rpm available is lower than recommended please reduce the feed rate to the same ratio.

Die angegebenen Schnittdaten sind eine Empfehlung. Die tatsächlichen Schnittdaten sollten immer an die Bearbeitung und Maschine angepasst werden. Ist die Ihnen zur Verfügung stehende Drehzahl niedriger als die in der Tabelle angegebene, sollte der Vorschub im gleichen Verhältnis reduziert werden. These conditions are for general guidance; in actual machining conditions adjust the parameters according to your actual machine and work-piece conditions. If the rpm available is lower than recommended please reduce the feed rate to the same ratio.

Richtwerte für den Einsatz von Karnasch Vollhartmetall-Fräsern für HSC/HPC-Bearbeitung
Recommended cutting data for solid carbide end mills HSC/HPC

Die angegebenen Schnittdaten sind eine Empfehlung. Die tatsächlichen Schnittdaten sollten immer an die Bearbeitung und Maschine angepasst werden. Ist die Ihnen zur Verfügung stehende Drehzahl niedriger als die in der Tabelle angegebene, sollte der Vorschub im gleichen Verhältnis reduziert werden. Bei Fräsoperationen bei denen sich die Spannuten zusetzen können z. B. beim Rippenfräsen, sollte die Zustelltiefe ap auf 80 % des angegebenen Wertes reduziert werden. These conditions are for general guidance; in actual machining conditions adjust the parameters according to your actual machine and work-piece conditions. If the rpm available is lower than recommended please reduce the feed rate to the same ratio. If the cutting process may cause clogging such as for rib processing, the cutting depth ap should be reduced to 80 % of the stated value.

Die angegebenen Schnittdaten sind eine Empfehlung. Die tatsächlichen Schnittdaten sollten immer an die Bearbeitung und Maschine angepasst werden. Ist die Ihnen zur Verfügung stehende Drehzahl niedriger als die in der Tabelle angegebene, sollte der Vorschub im gleichen Verhältnis reduziert werden. Bei Fräs-Operationen bei denen sich die Spannten zusetzen können z. B. beim Rippenfräsen, sollte die Zustelltiefe ap auf 80 % des angegebenen Wertes reduziert werden. These conditions are for general guidance; in actual machining conditions adjust the parameters according to your actual machine and work-piece conditions. If the rpm available is lower than recommended please reduce the feed rate to the same ratio. If the cutting process may cause clogging such as for rib processing, the cutting depth ap should be reduced to 80 % of the stated value.

Die angegebenen Schnittdaten sind eine Empfehlung. Die tatsächlichen Schnittdaten sollten immer an die Bearbeitung und Maschine angepasst werden. Ist die Ihnen zur Verfügung stehende Drehzahl niedriger als die in der Tabelle angegebene, sollte der Vorschub im gleichen Verhältnis reduziert werden. Bei Fräsoperationen bei denen sich die Spannuten zusetzen können z. B. beim Rippenfräsen, sollte die Zustelltiefe ap auf 80 % des angegebenen Wertes reduziert werden. These conditions are for general guidance; in actual machining conditions adjust the parameters according to your actual machine and work-piece conditions. If the rpm available is lower than recommended please reduce the feed rate to the same ratio. If the cutting process may cause clogging such as for rib processing, the cutting depth ap should be reduced to 80 % of the stated value.

Die angegebenen Schnittdaten sind eine Empfehlung. Die tatsächlichen Schnittdaten sollten immer an die Bearbeitung und Maschine angepasst werden. Ist die Ihnen zur Verfügung stehende Drehzahl niedriger als die in der Tabelle angegebene, sollte der Vorschub im gleichen Verhältnis reduziert werden. Bei Fräsoperationen bei denen sich die Spanntun zusetzen können z. B. beim Rippenfräsen, sollte die Zustelltiefe ap auf 80 % des angegebenen Wertes reduziert werden. These conditions are for general guidance; in actual machining conditions adjust the parameters according to your actual machine and work-piece conditions. If the rpm available is lower than recommended please reduce the feed rate to the same ratio. If the cutting process may cause clogging such as for rib processing, the cutting depth ap should be reduced to 80 % of the stated value.

Die angegebenen Schnittdaten sind eine Empfehlung. Die tatsächlichen Schnittdaten sollten immer an die Bearbeitung und Maschine angepasst werden. Ist die Ihnen zur Verfügung stehende Drehzahl niedriger als die in der Tabelle angegebene, sollte der Vorschub im gleichen Verhältnis reduziert werden.
These conditions are for general guidance; in actual machining conditions adjust the parameters according to your actual machine and work-piece conditions.
If the rpm available is lower than recommended please reduce the feed rate to the same ratio.

Richtwerte für den Einsatz von Karnasch VHM-Fräsern für HSC/HHC/HPC-Bearbeitung

Die angegebenen Schnittdaten sind eine Empfehlung. Die tatsächlichen Schnittdaten sollten immer an die Bearbeitung und Maschine angepasst werden. Ist die Ihnen zur Verfügung stehende Drehzahl niedriger als die in der Tabelle angegebene, sollte der Vorschub im gleichen Verhältnis reduziert werden.
These conditions are for general guidance; in actual machining conditions adjust the parameters according to your actual machine and work-piece conditions.
If the rpm available is lower than recommended please reduce the feed rate to the same ratio.

Die angegebenen Schnittdaten sind eine Empfehlung. Die tatsächlichen Schnittdaten sollten immer an die Bearbeitung und Maschine angepasst werden. Ist die Ihnen zur Verfügung stehende Drehzahl niedriger als die in der Tabelle angegebene, sollte der Vorschub im gleichen Verhältnis reduziert werden.
These conditions are for general guidance; in actual machining conditions adjust the parameters according to your actual machine and work-piece conditions.
If the rpm available is lower than recommended please reduce the feed rate to the same ratio.

Die angegebenen Schnittdaten sind eine Empfehlung. Die tatsächlichen Schnittdaten sollten immer an die Bearbeitung und Maschine angepasst werden. Ist die Ihnen zur Verfügung stehende Drehzahl niedriger als die in der Tabelle angegebene, sollte der Vorschub im gleichen Verhältnis reduziert werden.
These conditions are for general guidance; in actual machining conditions adjust the parameters according to your actual machine and work-piece conditions.
If the rpm available is lower than recommended please reduce the feed rate to the same ratio.

Richtwerte für den Einsatz von Karnasch VHM-Fräsern für HSC/HHC/HPC-Bearbeitung

Die angegebenen Schnittdaten sind eine Empfehlung. Die tatsächlichen Schnittdaten sollten immer an die Bearbeitung und Maschine angepasst werden. Ist die Ihnen zur Verfügung stehende Drehzahl niedriger als die in der Tabelle angegebene, sollte der Vorschub im gleichen Verhältnis reduziert werden.
These conditions are for general guidance; in actual machining conditions adjust the parameters according to your actual machine and work-piece conditions.
If the rpm available is lower than recommended please reduce the feed rate to the same ratio.

Hinweis:

Bei gleichen Schnittwerten der zylindrischen [30 6267] und der konischen [30 6268] Ausführung sind durch die erhöhte Stabilität des konischen Halses die Qualität der Oberflächen besser sowie eine höhere Lebensdauer erzielbar. Die erhöhte Stabilität des konischen Halses ermöglicht entweder eine Erhöhung des fz-Wertes um max. 20% oder eine Erhöhung des ap-Wertes um max. 10%. Bei der HSC-Bearbeitung können die Drehzahlen bis zu 400% erhöht werden. Dabei sollte der ae-Wert im unteren Bereich liegen.

Please note:

By using the same cutting data for the cylindrical neck [30 6267] and the conical neck [30 6268] you will achieve a better surface and the tool life will improved due to the more stable tool. Due to the more stable neck of the conical tool you can increase the feet per tooth by max. 20% or increase ap max. 10%. You can increase the speed up to 400% in HSC machining. The radial cutting depth ae should be in a lower range.

Die angegebenen Schnittdaten sind eine Empfehlung. Die tatsächlichen Schnittdaten sollten immer an die Bearbeitung und Maschine angepasst werden. Ist die Ihnen zur Verfügung stehende Drehzahl niedriger als die in der Tabelle angegebene, sollte der Vorschub im gleichen Verhältnis reduziert werden. These conditions are for general guidance; in actual machining conditions adjust the parameters according to your actual machine and work-piece conditions. If the rpm available is lower than recommended please reduce the feed rate to the same ratio.

Richtwerte für den Einsatz von VHM-Gesenkfräser mit Eckenradius
Recommended cutting data for solid carbide end mills with corner radius

Hinweis:

Bei gleichen Schnittwerten der zylindrischen [30 6267] und der konischen [30 6268] Ausführung sind durch die erhöhte Stabilität des konischen Halses die Qualität der Oberflächen besser sowie eine höhere Lebensdauer erzielbar. Die erhöhte Stabilität des konischen Halses ermöglicht entweder eine Erhöhung des fz-Wertes um max. 20% oder eine Erhöhung des ap-Wertes um max. 10%. Bei der HSC-Bearbeitung können die Drehzahlen bis zu 400% erhöht werden. Dabei sollte der ae-Wert im unteren Bereich liegen.

Please note:

By using the same cutting data for the cylindrical neck [30 6267] and the conical neck [30 6268] you will achieve a better surface and the tool life will improved due to the more stable tool. Due to the more stable neck of the conical tool you can increase the feed per tooth by max. 20% or increase ap max. 10%. You can increase the speed up to 400% in HSC machining. The radial cutting depth ae should be in a lower range.

Die angegebenen Schnittdaten sind eine Empfehlung. Die tatsächlichen Schnittdaten sollten immer an die Bearbeitung und Maschine angepasst werden. Ist die Ihnen zur Verfügung stehende Drehzahl niedriger als die in der Tabelle angegebene, sollte der Vorschub im gleichen Verhältnis reduziert werden.
These conditions are for general guidance; in actual machining conditions adjust the parameters according to your actual machine and work-piece conditions.
If the rpm available is lower than recommended please reduce the feed rate to the same ratio.

Hinweis:

Bei gleichen Schnittwerten der zylindrischen [30 6267] und der konischen [30 6268] Ausführung sind durch die erhöhte Stabilität des konischen Halses die Qualität der Oberflächen besser sowie eine höhere Lebensdauer erzielbar. Die erhöhte Stabilität des konischen Halses ermöglicht entweder eine Erhöhung des fz-Wertes um max. 20% oder eine Erhöhung des ap-Wertes um max. 10%. Bei der HSC-Bearbeitung können die Drehzahlen bis zu 400% erhöht werden. Dabei sollte der ae-Wert im unteren Bereich liegen.

Please note:

By using the same cutting data for the cylindrical neck [30 6267] and the conical neck [30 6268] you will achieve a better surface and the tool life will improved due to the more stable tool. Due to the more stable neck of the conical tool you can increase the feed per tooth by max. 20% or increase ap max. 10%. You can increase the speed up to 400% in HSC machining. The radial cutting depth ae should be in a lower range.

Die angegebenen Schnittdaten sind eine Empfehlung. Die tatsächlichen Schnittdaten sollten immer an die Bearbeitung und Maschine angepasst werden. Ist die Ihnen zur Verfügung stehende Drehzahl niedriger als die in der Tabelle angegebene, sollte der Vorschub im gleichen Verhältnis reduziert werden. These conditions are for general guidance; in actual machining conditions adjust the parameters according to your actual machine and work-piece conditions. If the rpm available is lower than recommended please reduce the feed rate to the same ratio.

Richtwerte für den Einsatz von VHM-Gesenkräuser mit Eckenradius
Recommended cutting data for solid carbide end mills with corner radius

Hinweis:
Bei gleichen Schnittwerten der zylindrischen [30 6267] und der konischen [30 6268] Ausführung sind durch die erhöhte Stabilität des konischen Halses die Qualität der Oberflächen besser sowie eine höhere Lebensdauer erzielbar. Die erhöhte Stabilität des konischen Halses ermöglicht entweder eine Erhöhung des fz-Wertes um max. 20%

Modifizierung der Schnittdaten für Kupfer
Modification of the cutting conditions for copper $n = + 25 \% / fz = + 25 \%$

Sind die Ihnen zur Verfügung stehenden Drehzahlen geringer als in dieser Tabelle vorgegebenen ist der Vorschub im gleichen Verhältnis zu reduzieren.
If the rpm available in lower than recommended, reduce the feed rate to the same ratio.

Empfohlene Schnittdaten für Karnasch Micro-Schaftfräser
Recommended cutting data for Karnasch solid carbide micro end mills

Empfohlene Schnittdaten für Karnasch Micro-Schaftfräser Recommended cutting data for Karnasch solid carbide micro end mills

1 Nuten Slot milling

Chemisch beständige und warmfeste Stähle, leg. Stähle bis 1000 N/mm², Vergütungs- und Werkzeugstähle, GG > 200 HB.
Chemical resistant and high temperature steel. Alloyed steel until 1000 N/mm². Heat treatable and tool steel, GG > 200 HB.

Bei Werkzeugen mit großer Ausragelänge sollte der Vorschub je nach geforderter Oberflächengüte reduziert werden.
Tools with a larger projection length the feed should be reduced according to the required surface quality.

Empfohlene Richtwerte für den Einsatz von Karnasch VHM-Fräsern „DUO“ für die HSC/HHC-Bearbeitung

Die angegebenen Schnittdaten sind eine Empfehlung. Die tatsächlichen Schnittdaten sollten immer an die Bearbeitung und Maschine angepasst werden. Ist die Ihnen zur Verfügung stehende Drehzahl niedriger als die in der Tabelle angegebene, sollte der Vorschub im gleichen Verhältnis reduziert werden.
These conditions are for general guidance; in actual machining conditions adjust the parameters according to your actual machine and work-piece conditions.
If the rpm available is lower than recommended please reduce the feed rate to the same ratio.

Bearbeitungshinweise:

- Vorausgesetzt, es werden stabile Maschinenverhältnisse und einwandfreie Werkzeugaufnahmen verwendet (Schrumpffutter)
- Die genannten Richtwerte basieren auf interpolationsfräsen auch in den Ecken. Ohne Interpolationsfräsen reduzieren Sie die Schnittgeschwindigkeit (Vc) um 50%-70% sowie die Schnitttiefe (ap) um 50%-80%.
- Kühlen Sie mit MMKS (Minimalkühlschmierung) oder Luft.
- Beim Eintauchen in Z-Achse mit einer Schräge von $\approx 2^\circ$ ist der Vorschub auf 40-60% zu reduzieren.
- Die Richtwerte beziehen sich auf eine Auskraglänge l3 von 3xD. Für tiefere Anwendungen sind Vc / ap / Vf den Gegebenheiten anzupassen.
- Um optimale Schnittbedingungen zu erreichen sind die Einsatzbedingungen vor Ort zu berücksichtigen.

Machining details:

- Conditions must be: rigid machine circumstances and excellent holders. (shrinking holder)
- The mentioned standard values based on interpolation milling also in corners.
- Coolant with MMKS [MQL (mist)] on air blow.
- When dipping in Z-axis, you have to reduce the feed speed 40% > 60%.
- The standard values refer to the length l3 od 3xD. For deeper applications please adjust Vc/ap/Vf for the conditions.
- In order to achieve ideal cutting results you have to consider your local operating conditions.

| Länge außerhalb Spannfutter overhang length l7 | Vc - % | ap - % | Vf - % |
|---|--------|--------|--------|
| $l7 \leq 4 \times d1$ | 100 | 100 | 100 |
| $l7 \leq 5 \times d1$ | 70 | 70 | 80 |
| $l7 \leq 6 \times d1$ | 50 | 50 | 70 |

Die angegebenen Schnittdaten sind eine Empfehlung. Die tatsächlichen Schnittdaten sollten immer an die Bearbeitung und Maschine angepasst werden.
These conditions are for general guidance; in actual machining conditions adjust the parameters according to your actual machine and work-piece conditions.

$$\text{Spanmittendicke } hm: hm \text{ (mm)} = fz \times \sqrt{\frac{ae}{D}}$$

$$\text{Average chip thickness } hm: hm \text{ (mm)} = fz \times \sqrt{\frac{ae}{D}}$$

Bearbeitungshinweise:

- Vorausgesetzt, es werden stabile Maschinenverhältnisse und einwandfreie Werkzeugaufnahmen verwendet.
- Bei größeren Auskraglängen müssen die Schnittdaten entsprechend reduziert werden.
- Die angegebenen Schnittdaten sind auf eine Auskraglänge von max. 4xD und eine Werkstückschräge von max. 15° angelegt.
- Ist der Eckenradius der Werkstückkontur kleiner als 1,5 x Werkzeugradius, oder die Kontur zu steil, müssen die Schnittdaten um ≈ 50% reduziert werden.

Processing information:

1. Conditions must be: rigid machine circumstances and excellent holders.
2. Reduce the cutting data when you machine with long neck length.
3. The stated cutting data belongs to a neck length of max 4xD and a tapered workpiece of max. 15°.
4. If the corner radius of the workpiece contour is smaller than 1,5x end mill radius or the workpiece contour is too steep, you have to reduce the cutting data up to 50%

Bei Werkzeugen mit großer Auskraglänge sollte der Vorschub je nach geforderter Oberflächengüte reduziert werden.
Tools with a larger projection length the feed should be reduced according to the required surface quality.

Die angegebenen Schnittdaten sind eine Empfehlung. Die tatsächlichen Schnittdaten sollten immer an die Bearbeitung und Maschine angepasst werden. Ist die Ihnen zur Verfügung stehende Drehzahl niedriger als die in der Tabelle angegebene, sollte der Vorschub im gleichen Verhältnis reduziert werden. Verwenden Sie ausschließlich stabile und hochgenaue Maschinen. Wir empfehlen beim fräsen in Ecken den Vorschub um ca. 50% zu reduzieren. These conditions are for general guidance; in actual machining conditions adjust the parameters according to your actual machine and work-piece conditions. If the rpm available is lower than recommended please reduce the feed rate to the same ratio. Use only accurate and highly rigid machines. We recommend to reduce the feed rate about 50% when milling in corners.

Die angegebenen Schnittdaten sind eine Empfehlung. Die tatsächlichen Schnittdaten sollten immer an die Bearbeitung und Maschine angepasst werden. Ist die Ihnen zur Verfügung stehende Drehzahl niedriger als die in der Tabelle angegebene, sollte der Vorschub im gleichen Verhältnis reduziert werden. Verwenden Sie ausschließlich stabile und hochgenaue Maschinen. Wir empfehlen beim fräsen in Ecken den Vorschub um ca. 50% zu reduzieren. These conditions are for general guidance; in actual machining conditions adjust the parameters according to your actual machine and work-piece conditions. If the rpm available is lower than recommended please reduce the feed rate to the same ratio. Use only accurate and highly rigid machines. We recommend to reduce the feed rate about 50% when milling in corners.

Die angegebenen Schnittdaten sind eine Empfehlung. Die tatsächlichen Schnittdaten sollten immer an die Bearbeitung und Maschine angepasst werden. Ist die Ihnen zur Verfügung stehende Drehzahl niedriger als die in der Tabelle angegebene, sollte der Vorschub im gleichen Verhältnis reduziert werden. Verwenden Sie ausschließlich stabile und hochgenaue Maschinen. Wir empfehlen beim fräsen in Ecken den Vorschub um ca. 50% zu reduzieren. These conditions are for general guidance; in actual machining conditions adjust the parameters according to your actual machine and work-piece conditions. If the rpm available is lower than recommended please reduce the feed rate to the same ratio. Use only accurate and highly rigid machines. We recommend to reduce the feed rate about 50% when milling in corners.

Die angegebenen Schnittdaten sind eine Empfehlung. Die tatsächlichen Schnittdaten sollten immer an die Bearbeitung und Maschine angepasst werden. Ist die Ihnen zur Verfügung stehende Drehzahl niedriger als die in der Tabelle angegebene, sollte der Vorschub im gleichen Verhältnis reduziert werden. Verwenden Sie ausschließlich stabile und hochgenaue Maschinen.
These conditions are for general guidance; in actual machining conditions adjust the parameters according to your actual machine and work-piece conditions. If the rpm available is lower than recommended please reduce the feed rate to the same ratio. Use only accurate and highly rigid machines.

Wir empfehlen die Fräser mit dem Anstellwinkel a/2 einzusetzen.
We recommend to use the end mills with work angle a/2.

Die angegebenen Schnittdaten sind eine Empfehlung. Die tatsächlichen Schnittdaten sollten immer an die Bearbeitung und Maschine angepasst werden. Ist Ihnen zur Verfügung stehende Drehzahl niedriger als die in der Tabelle angegebene, sollte der Vorschub im gleichen Verhältnis reduziert werden. Verwenden Sie ausschließlich stabile und hochgenaue Maschinen.
These conditions are for general guidance; in actual machining conditions adjust the parameters according to your actual machine and work-piece conditions. If the rpm available is lower than recommended please reduce the feed rate to the same ratio. Use only accurate and highly rigid machines.

Achtung: Schnittdaten für Hardox 500 nur anwendbar auf Artikelgruppe 40 3045. Schnittdaten für Hardox 400 nur anwendbar auf Artikel 20 1786 045, 20 1776 045, 20 1796 040.

Kühlung beim Bearbeiten von Hardox: Verwenden Sie zur Kühlung nur ölhaltige Kühlmittel ohne Wasseranteile wie zum Beispiel unser Mecutoil 100 (siehe Seite 1144/1145 Artikel 60 1100 10, 60 1100 5, 60 1100 25), Mecut-MMKS-MQL / Steel+Alu (siehe Seite 1144/1145 Artikel 60 1154, 60 1153), Mecutspray (siehe Seite 1146/1147 Artikel 60 1150) oder unsere Schneidpaste (siehe Seite 1146/1147 Artikel 60 1159, 60 1157).

Attention: Cutting data for Hardox 500 only applicable to article group 40 3045. Cutting data for Hardox 400 only applicable to article 20 1786 045, 20 1776 045, 20 1796 040.

Cooling advice while machining Hardox: For cooling, only use oily coolants without water, such as our Mecutoil 100 [see page 1144/1145 article 60 1100 10, 60 1100 5, 60 1100 25], Mecut-MMKS-MQL / Steel+Alu (see page 1144/1145 article 60 1154, 60 1153), Mecutspray (see page 1146/1147 article 60 1150) or our cutting paste (see page 1146/1147 article 60 1159, 60 1157).

Diese Schnittdaten stehen in Abhängigkeit der Auskraglänge. Korrigieren Sie gegebenenfalls Vc + fz sowie ae und ap um ein optimales Ergebnis zu erzielen!
This cutting data depends upon the projecting length. If necessary correct Vc + fz as well as ae and ap for achieving an optimal result!

Empfohlene Schnittdaten für DIAMANT-beschichtete Schruppfräser / HSC-Bearbeitung

VORTEILE HSC-FRÄSEN
ADVANTAGES FOR HSC MILLING

- 1 Verkürzung der Fräszeit um 20 bis 50%.
Shortening of the milling time from 20 up to 50%.
- 2 Reduzierung der manuellen Nacharbeit bis zu 80%.
Reduction of the hand retro-processing by up to 80%.

Fazit/Conclusion:

Beim HSC-Fräsen reduziert sich die Herstellung und Durchlaufzeit um ca. 50%.
With HSC milling the manufacturing process and through put time is reduced by approximately 50%.

Anwendungshinweis/Application instructions:

- a) Zum Schrappen und Vorschlichten verwenden Sie torische Fräser.
Utilize toric grinders for rough cutting and pre-finishing.
- b) Zur Fertigbearbeitung/Schlichten sollten 3D-Radiusfräser eingesetzt werden.
3D radius cutters should be utilized for finishing processes/plane processing.

|---|----------------|--|--|
| | | | |
| Der Ziehchnitt ist dem Bohrschnitt vorzuziehen. Mandrel cutting should be utilized in preference to drill cutting. | | Vorzugsweise empfehlen wir einen Kippwinkel von 12°-15° um eine Zerspanung im Zentrum zu vermeiden. We preferably recommend tilted angle of 12°-15° so that a cutting in the middle can be avoided. | Diese Abbildung zeigt den positiven Einfluss des Kippwinkels auf die Schnittgeschwindigkeit Vc ¹ = niedrigste Schnittgeschw. Vc ² = höchste Schnittgeschw. This illustration shows the positive influence of the tilted angle on the cutting speed Vc ¹ = lowest cutting speed Vc ² = highest cutting speed |

- Falls diese Drehzahlen nicht vorhanden sind, ist die maximal mögliche Drehzahl zu wählen und die Vorschübe anzupassen.
When using low speed machines, use the maximum speed and adjust the feed rate.
- Beim Trockenfräsen Vc und fz auf 70% der Schnittwerte reduzieren.
In dry milling (recommended air blow), reduce the rotation and feed to 70% to table values.
- Bei aufkommenden Vibrationen, Schnittwerte anpassen.
Adjust milling condition, when unusual vibration, different sound occur by cutting.
- Als Spannmittel empfehlen wir die Schrumpftechnik.
We recommend as a clamping device the shrinking technique.

Empfohlene Schnittdaten für DIAMANT-beschichtete Fräswerkzeuge / HSC-Bearbeitung

Recommended cutting data for solid carbide • alu-highspeed • end mills HSC

Nuten/Schruppen
Slot milling/Roughing

Umfangfräsen/Schlichten
Circumference milling/Finishing

Die Schnittwerte gelten für:
 $ap = 1 \times D$ $ae = 0,3 \times D$
 Bei anderen Spanungsquerschnitten
 Schnittwerte entsprechend anpassen.
 Bei extra langer Ausführung sind die
 Schnittwerte um 50 % zu reduzieren

Cutting data refers to:
 $ap = 1 \times D$ $ae = 0,3 \times D$
 For different cutting volumes, adjust
 cutting data correspondingly.
 For extra long design reduce cutting
 data by approximately 50 %.

Richtwerte für den Einsatz der KARNASCH VHM-Hochleistungsbohrer mit Innenkühlung ab Ø 0,8 – Ø 2,9
Recommended cutting data for solid carbide twist drill, with interior cooling supply

22 0322

Wir empfehlen eine Pilotbohrung bei überlangen Werkzeugen mit 18xD. Verwenden Sie für diese Pilotbohrung die Art.-Nr. 22 0321 ohne Innenkühlung. Alternativ Art.-Nr. 22 0322 mit Innenkühlung in den kürzesten lieferbaren Ausführung. Diese Pilotbohrer sind mit der Durchmessertoleranz m7 auf die überlangen Werkzeuge mit tol. h7 abgestimmt. Empfohlene Bohrtiefe der Pilotbohrung 3-5xD. Kühlmitteldruck 30-80 bar.

We recommended a pilot drilling for the excess length tools art.-no. 22 0322 - 18xD. Please use for the pilot drilling our art.-no. 22 0321 without interior cooling. Alternative art.-no. 22 0322 with interior cooling in the shortest l3 version. These pilot drills are, with the diameter tolerance m7, to the excess length tools with tolerance h7 coordinated. Recommended drilling depth of the pilot borehole 3-5xD. Coolant pressure 30-80 bar.

Die angegebenen Richtwerte für die Schnittgeschwindigkeit Vc sind je nach Bohrtiefe bezogen auf den Durchmesser mit dem Korrekturfaktor KFv zu multiplizieren.
The indicated standard values for the cutting speed Vc depends on drilling depth related to the diameter to multiply by the correction factor KFv.

Richtwerte für den Einsatz der KARNASCH VHM-Hochleistungsbohrer mit Innenkühlung ab Ø 2,0 – Ø 2,95 24xD – 30xD
Recommended cutting data for solid carbide twist drill, with interior cooling supply

22 0322

Kühlschmierung

Um optimale Ergebnisse zu erzielen, empfehlen wir Hochleistungs-Schneidöl zu verwenden. Alternativ kann eine Emulsion mit EP-Zusätzen verwendet werden.

Cooling:

We recommend to use a high performance cutting oil to achieve a good performance. You can use as an alternative emulsions with EP-contens.

Filterqualität:

Eine sehr gute Filterqualität ist bei kleinen Durchmessern unerlässlich. Die Filter sollten die folgende Qualität haben:
Filter <0,01 mm für Bohrer <1 mm
Filter <0,02 mm für Bohrer >1 mm

Quality of the filtersystem:

A very good filtersystem is necessary by using such small diameter. The filter should have the following quality:
Filter <0,01 mm for drill Ø <1 mm
Filter >0,02 mm for drill Ø >1 mm

Entspänen:

In einigen Fällen ist ein entspänen notwendig. Dies ist abhängig vom Werkstoff. Als Richtlinie empfehlen wir:
bis 6xD Bohrtiefe: Kein entspänen
bis 10xD Bohrtiefe: 0 - 2 mal entspänen
bis 18xD Bohrtiefe: 0 - 4 mal entspänen
bis 24xD Bohrtiefe: 0 - 6 mal entspänen
bis 30xD Bohrtiefe: 0 - 8 mal entspänen

Zum entspänen sollte der Karnasch-Bohrer ganz aus der Bohrung gefahren werden.

| Werkstoffe Work Material | Werkstoffgruppe Material Group | Festigkeit in N/mm Strength in N/mm | Ø 2.00-2.95 | |
|--|-----------------------------------|---|--|--------------------------------------|
| | | | Schnittgeschwindigkeit / Cutting Speed (m/min) | Vorschub (mm/U) Feed (mm/rev) |
| Baustahl Mild Steel | 1.1 | ≤ 600 | 60 [50-70] | 0.10 [0.08-0.12] |
| Kohlenstoffstahl Legierter Stahl Carbon Steel Alloy Steel | 1.2-2.1-2.2 2.2-2.3-2.5-2.6 | 600-950 950-1.200 | 50 [40-60] 50 [40-60] | 0.09 [0.06-0.12] 0.07 [0.05-0.10] |
| Edelstahl Stainless Steel | 3.1 | 680 | 30 [20-40] | 0.06 [0.04-0.08] |
| Guss Cast Iron | 7.1-7.2 | ≤ 105 HB | 50 [40-60] | 0.09 [0.06-0.12] |
| Kugelgraphitguss Ductile Cast Iron | 7.4 | ≤ 133 HB | 50 [40-60] | 0.07 [0.05-0.10] |
| Wärmefeste Legierungen Heat Resistant Alloy | 31-32 | ≤ 280 HB | 15 [10-20] | 0.03 [0.01-0.05] |

Chip removal:

In some cases it is necessary to remove the chips. This depends to the material: We recommend as a guideline:
depth to 6xD: no peckings
depth to 10xD: 0 - 2 peckings
depth to 18xD: 0 - 4 peckings
depth to 24xD: 0 - 6 peckings
depth to 30xD: 0 - 8 peckings

The Karnasch drill should be withdrawn completely from the drill hole for pecking.

Praxistest Miniboherer Vollhartmetall mit Innenkühlung

Practical test for solid carbide micro drills with interior cooling supply

22 0322

12 x D Bohren ab 0,8 mm mit Innenkühlung ist nicht jedermann's Sache!

Als Vorreiter in Sachen HSC-Bohren mit Bohrtiefen über 5 x D haben wir uns in der Branche einen Namen gemacht. Weltweit haben wir bei unzähligen Kunden die Bearbeitungszeiten um bis zu 600% reduziert und gleichzeitig die Prozesssicherheit und Standzeit um ein vielfaches erhöhen können.

Das neueste Produkt sind MINI-Vollhartmetallbohrer ab 0,8 mm mit Innenkühlung mit einer Bohrtiefe von 18 x D. Der Wettbewerbsdruck unserer Kunden in der weltweit zunehmenden Globalisierung hat uns dazu bewegen diesen Schritt zu gehen. Diese HSC-Miniboherer mit Innenkühlung 6 x D und 12 x D können in den Abmessungen 1,0 mm bis 2,9 mm um 0,1 mm steigend ab Lager geliefert werden.

Ab 3,0 mm bis 20,0 mm können Sie auf das bestehende Programm in 3 x D / 5 x D / 8 x D / 12 x D zurückgreifen.

12 x D drilling starting from 0,8 mm with interior cooling supply isn't everyone's thing.

As pioneer in HSC-drills with drilling depths over 5 x D our reputation is well known all over the world. Productive time of our customer decreased up to 600%. Increased process security and cutting-edge live at the same time.

The latest products are Mini-solid carbide drills, starting from 0,8 mm with interior cooling supply with drilling depth up to 12 x D. The competition-pressure from our customers in the worldwide increasing globalization forced us into this direction. These HSC-Mini drills with interior cooling supply 6 x D and 18 x D can be supplied in the dimensions 1,0 mm to 2,9 mm in 0,1 mm steps from stock.

From 3,0 mm to 20,0 mm see our existing program in 3 x D, 5 x D, 8 x D, 12 x D.

| Neigung Werkstückoberfläche Inclination material surface | Korrekturfaktoren Kv für f [mm/U] beim Anbohren / Correction factor Kv for f [mm/U] during spot drilling | |
|---|--|--|
| | Kv 3xD | Kv 5xD |
| 15° | 0,5 | 0,25 |
| 30° | 0,4 | nicht empfehlenswert / not recommended |
| 45° | 0,25 | nicht empfehlenswert / not recommended |

- Beim Anbohren Vorschub f [mm/U] mit Korrekturfaktor Kv multiplizieren
- Anbohren mit reduziertem Vorschub bis Werkzeug auf 0,25xD im ganzen Ø schneidet
- Bei schrägem Anbohren: Zurückfahren mit doppeltem Vorschub f [mm/U]
- Nach dem Anbohren mit reduziertem Vorschub (Korrekturfaktor) wird mit dem Vorschub f [mm/U] gemäß Schnittdatenempfehlung ohne Korrekturfaktoren weitergebohrt.
- Auf ebenen Flächen (0°) empfehlen wir eine Pilotbohrung mit unserem VHM-Böhrer 22 0405 / 22 0406.

- Multiply the feed rate f [mm per rev.] with our correction factor Kv for spot drilling
- Spot drilling with reduced feed rate until tool is cutting with full diameter 0,25xD in depth.
- After spot drilling with a reduced feed rate (correction factor) you drill with the feed rate f [mm/U] according to the recommended cutting data.
- We recommend on flat surfaces (0°) a pilot hole with our solid carbide drill 22 0405 / 22 0406.

Vollhartmetall-Hochleistungs-Flachkopfböhrer 180°

Durch die spezielle Geometrie des 180° Hochleistungs-Flachkopfböhrer können schwierigste Böhroperationen bei höchsten Standzeiten prozesssicher gebohrt werden. Durch die 4-Fasengeometrie werden optimale Rundheiten und Oberflächen in der Böhrung erzielt. Durch das Zusammenspiel der DMC-X2-Beschichtung, der polierten Spannuten und der optimierten Spannutengeometrie, wird ein sehr guter Spänetransport sichergestellt.

Solid Carbide High-Performance 180° shallow drills

It is possible to drill difficult drilling operations by a maximum tool life, through the special geometry of our 180° shallow drill. We realize an optimal roundness and surface quality of the hole, through our 4-chamfer geometry. Because of the interaction of our DMC-X2 coating, the polished flute and the optimized flute geometry, we ensure a smooth chip remove.

Index

Bohrstrategie von Karnasch – VHM-Bohrer bis 12 mm Durchmesser und über 18xD Auskräglänge l3 Drilling strategy from Karnasch – VHM drill bits up to 12 mm in diameter and in excess of 18xD protection length l3

Drehzahl in Abhängigkeit von Durchmesser und Auskräglänge l3

Überhöhte Drehzahlen können im Extremfall durch Zentrifugalkräfte zum Werkzeugbruch führen. Zu hohe Anfangsbeschleunigung sowie plötzliche Richtungsänderungen dieser überlangen schlanken Werkzeuge sind zu vermeiden.

Karnasch empfiehlt daher Drehzahlkritische Bereiche nicht zu überschreiten (siehe Tabelle).

The drill speed is dependent on the diameter and protection length l3

Excessive drill speeds could result in the tool breaking through the centrifugal force created. You should avoid drastically increasing the speed of the drill from the outset, as well as abruptly changing the direction of these long, slender tools.

Karnasch therefore recommends that you do not exceed the critical speed ranges (see the tables).

Beispiel / Example:

Durchmesser / Diameter d1 = 10 mm
Nutzlänge / Effective length l3 = 220 mm
Drehzahlkritischer Bereich / Critical rpm range max. 8000 min⁻¹

Richtwerte für den Einsatz von KARNASCH VHM-Hochleistungsbohrern mit Innenkühlung <40xD
Recommended cutting conditions for Karnasch solid carbide drills <40xD

22 0390

Wir empfehlen bei diesen High-Speed-Tieflochbohrern der Serie 22 0390 eine Pilotbohrung vorzunehmen. Verwenden Sie bevorzugt ein Werkzeug mit 3xD Bohrtiefe (22 0405) oder alternativ bis 5xD Bohrtiefe mit Innenkühlung. Der Spitzwinkel von 140° sowie die Durchmesserstoleranz m7 sind darauf abgestimmt. Ein Mindestkühlmitteldruck von 30 bar ist ausreichend. <20xD über 20xD 50 bar.

Jetzt mit 22 0390 anbohren (ca. 1-2xD) mit reduzierter Vorschub- und Schnittgeschwindigkeit ca. 40-50% der empfohlenen Werte. Danach ohne Unterbrechung die Vorschub- und Schnittgeschwindigkeit auf die empfohlenen Richtwerte erhöhen. Diese Bohrstrategie sollte ohne lüften oder Vorschubunterbrechung erfolgen.

Nach Erreichen der Bohrtiefe ist die Drehzahl auf ca. 30% zu reduzieren, um aus der Bohrung heraus zu fahren. Auch ein Stillstand der Spindel kann im Extremfall von Vorteil sein. Unser Nachschleifservice garantiert Ihnen kurze Lieferzeiten mit 100% Standzeitgarantie.

We recommend that you drill a pilot hole when using series 22 0390 high-speed, deep hole drill bits. Preferentially you should use a tool with 3xD drilling depth (22 0405), or alternatively up to 5xD drilling depth with internal cooling. The point angle of 140° as well as the diameter tolerance m7 are aligned. A minimum coolant pressure of 20-30 bar is sufficient.

Now drill using the 22 0390 series (approx. 1-2xD), with a reduced feed rating and cutting speed of approx. 40-50% of the recommended value. Then increase the feed rating and the cutting speed, without interruption, to the recommended benchmarks. The drilling strategy should be conducted without ventilation of interrupting the feed rate.

After reaching the desired drilling depth, the drill speed should be reduced to approx. 30% in order to extract the drill from the hole. The drill being completely still can be an advantage in extreme cases. Our regrinding service ensures short delivery times and a 100% lifetime guarantee.

Auf schräge Werkstücke bohren - Einsatzhinweise für Vollhartmetall-Hochleistungsbohrer < 40xD

Drilling on oblique work piece - Appliation instruction for Solid carbide twist drill < 40xD

1 Planbohren / Planfräsen "Face drilling / Face milling"

Bohren / Fräsen Sie eine ebene Fläche in das Werkstück mit einem Bohrer / Fräser des gleichen Durchmessers wie die der gewünschten Bohrung oder verwenden Sie unseren 180° Flachkopfbohrer Art. 22 0404.

Drill/Mill a flat surface on the work piece in the same dimension as the diameter of the hole should be or use our shallow drill 180° ref. 22 0404.

2 Pilotbohrung setzen Drilling a pilot hole

1 Für die Pilotbohrungen empfehlen wir den Einsatz der Karnasch Bohrer Art. Nr. 22 0402 oder 22 0405 in der jeweils kürzesten Ausführung.
2 Bitte stellen Sie eine präzise Pilotbohrung zwischen 1,5 und 2xD her, um einen einwandfreien Bohrprozess zu gewährleisten. (Passen Sie die Pilotbohrungstiefe der Länge Ihres Tieflochbohrers an)

1 We recommend to use our Karnasch solid carbide high performance twist drill 22 0402 or 22 0405 in the shortest version, to place a pilot hole.
2 Please drill a precision hole between 1,5xD and 2xD, to ensure a perfect drilling process.

3 Einfahren in die Pilotbohrung
Enter into the pilote hole

Dringen Sie mit niedriger Drehzahl und ohne Kühlmittel in die Pilotbohrung ein, bis 1 mm vor den Bohrungsgrund. (Max. 300 U/min und Vf = 1000 mm/min)

Enter the pilot hole with low speed and without internal cooling supply before 1 mm of the hole ground (max. 300 min⁻¹ and Vf = 1000 mm/min).

5 Durchgangsbohrung
Through hole drilling

- 1 Beim Austritt aus dem Werkstück kann die Schneidkante des Bohrers ausbrechen.
- 2 Verringern Sie den Vorschub auf $f = 0,05 \text{ mm/U} - 0,1 \text{ mm/U}$

- 1 The cutting edge could break if you have a angular faced drill exit.
- 2 Reduce the feed rate to $f = 0,05 \text{ mm/min} - 0,1 \text{ mm/min}$

4 Tieflochbohren
Deep hole drilling

Bohren Sie auf Ihre gewünschte Bohrtiefe. Schnittdaten und Kühlmitteldruck auf Seite 1242 + 1245

Drill to the required depth. Cutting data and cooling preasure see on page 1242 + 1245

6 Herausfahren des Bohrers
Retract the drill

- 1 Herausfahren bis zur Tiefe der Pilotbohrung mit Vf = 2000 mm/min
- 2 Herausfahren des Bohrers aus der Pilotbohrung mit geringer Drehzahl und ohne Kühlmittel (n = 300 U/min, Vf = 2000 mm/min).

- 1 Retracting of the hole until the depth of the pilot hole with Vf = 2000 mm/min.
- 2 Retracting from the pilot hole with low speed and without internal cooling supply (n = 300 min⁻¹, Vf = 2000 mm/min.).

Bei Bohrtiefen **über 4 × D** empfehlen wir die **"Soft Inn"** Strategie. Diese Bohrstrategie begünstigt den Späntransport und erhöht die Produktionssicherheit um ein vielfaches.

Kein Anzentrieren oder Führungsbohrungen. Dadurch reduzieren Sie Ihre **Produktionszeiten um ca. 15%** sowie die **Lagerkosten um 50%**.

- I. Die Toleranz der Bohrspindel sollte weniger als 0,002 mm betragen.
- II. Wir empfehlen für diese High-Tech-Produkte den Einsatz von Schrumpfhaltern.

We recommend for drilling depth of **more than 4 × D** our **"Soft Inn"** strategy. This drilling strategy supports the chip transport and enhance the product safety many times.

No centering or pilot hole. This reduces your **production time about 15%** as well the **storage costs about 50%**.

- I. The run out with a drill in a spindle should be less than 0,002 mm.
- II. The shrink fit system acts as an effective holder.

Wichtige Einsatzkriterien zu Karnasch VHM-Bohrern:

Wahl der geeigneten Spannmittel: Die erforderliche Spannung der Bohrer ist die Zylinderschaftaufnahme nach DIN 6535 Form HAK/HA. Hohe Rundlaufgüten und kraftschlüssige Spannungen weisen außerdem Dehnspannfutter sowie Schrumpfspannfutter auf. Bei optimaler Spannung der Werkzeuge sind hohe Fluchtungsgenauigkeiten und Oberflächengüten erzielbar. In vielen Fällen kann deshalb auf Reiboperationen verzichtet werden. Der **Rundlauffehler beim rotierenden Werkzeug sollte 0,015 mm nicht überschreiten.** Die Werkzeuge sind aufgrund ihrer geometrischen Auslegung und Eigensteifigkeit **zum Bohren ins Volle geeignet.** Arbeitsgänge wie **Anzentrieren, Vorbohren und Aufbohren sollten entfallen**, um beim Ansetzen der Werkzeuge eine Verlagerung der Rotationsachse zur Vorbohroperation auszuschließen. Ferner wird ein ungünstiger Eingriff der Bohrerspitze bei abweichendem Spitzenwinkel zum Vorbohrwerkzeug vermieden. Ist eine Anfasung erforderlich, sollte das Anfasen **nach der Bohroperation erfolgen.** Die in der **Schnittwerttabelle** angegebenen **Vorschubwerte sollten nicht unterschritten** werden, um einen kontrollierten Spanbruch (Kommaspan) zu erhalten. Bei zu kleinem Spanmittlenquerschnitt (Vorschub zu gering) wird zu wenig Wärme über den Span abgeführt, die Temperatur geht vermehrt in das Werkzeug über; dies führt zu Standzeitverlust.

Bei **unterbrochenem Schnitt**, z. B. Eintritt- und Austrittschrägen oder Querbohrungen, sollte in diesem Bereich mit **reduzierten Vorschubwerten gefahren werden.** Die Bohrer sind mit ausreichender **Kühlschmierung einzusetzen.** Zur Erzielung guter Bearbeitungsergebnisse sollten hochwertige halbsynthetische oder Emulsions Kühlschmierstoffe (min. 10% Öl) und EP-Zusätze verwendet werden. **Dadurch lassen sich längere Standzeiten sowie höhere Toleranzgenauigkeiten und Oberflächengüten erzielen.** Über 5 × D Bohrtiefe ist unter ungünstigen Gegebenheiten ein- oder mehrmaliges Ausspannen erforderlich. **Ab 8 × D sollte beim Anbohren der Vorschub um 50% verringert werden.** Bei VHM-Bohrern mit Innenkühlung sind 40 - 50 bar Kühlmitteldruck **notwendig um den optimalen Spänefluß zu gewährleisten!**

Important criteria for the use of Karnasch VHM drills

Selection of the appropriate means to achieve tension: The tension the drill requires is the cylinder shank seat in accordance with DIN 6535 Form HAK/HA. In addition to that high-precision true running and non-positive tensions show stress chuck and contraction chuck. With the tools having an optimum tension both high-precision true alignment and high quality surfaces can be achieved. In many cases there is therefore no need of friction operations. **The eccentricity of revolving tools should not exceed 0,015 mm.** Due to their geometrical layout and inherent stiffness the tools are qualified for drilling at maximum power. Working cycles such as pre-centering, pilot-drilling and boring open should not be carried out to avoid the rotational axis shifting to the pilot-drilling operation when the tools are put on. **Furthermore, an unfavourable intervention of this bits with the point angle deviating to the pilot-drilling tool is avoided.** Should chamfering be required, the chamfering is to be carried out after the drilling operation.

The advance values should not be lower than those specified in the cut value chart to achieve a controlled chip breakage. When the chip centre cross-section is too small (advance is insufficient) an insufficient quantity of heat is carried off trough the chip. The temperature penetrates more and more into the tool, resulting in loss of toll life. In case of an interrupted cut, e.g. approach inclinations and emersion inclinations of transverse drillings reduced advance values should be applied in this area. The drills are to be operated with sufficient cooling lubrication. To achieve good working results, high-quality half synthetic or emulsion cooling lubricants (min. 10 oil) and EP additives are to be used. **By that means a longer tool life as well as higher tolerance precisions and surface qualities can be achieved.** Given more than 5 × D drilling depth chamfering is required once or repeatedly under unfavourable conditions. **From 8 × D onwards the advance should be reduced by 50% when spot-drilling.** Solid carbide drills with interior cooling require 40 - 50 bar cooling agent pressure to ensure an optimum of chip flow.

Richtwerte für den Einsatz der KARNASCH VHM-Hochleistungsbohrer ohne Innenkühlung Recommended cutting data for solid carbide twist drill, without interior cooling supply

Die angegebenen Richtwerte für die Schnittgeschwindigkeit V_c sind je nach Bohrtiefe bezogen auf den Durchmesser mit den untenstehenden Korrekturfaktoren KF_v zu multiplizieren.

The indicated standard values for the cutting speed V_c depends on drilling depth related to the diameter to multiply by the correction factor KF_v .

| | | | | |
|--------|-----|-----|-----|-----|
| KF_v | 1xD | 2xD | 3xD | 5xD |
| | 1,2 | 1,0 | 0,8 | 0,7 |

Die in den Schnittwerttabellen enthaltenen Richtwerte gelten nur beim Einsatz von Spannfuttern nach DIN 1835 Form E und Hydrodehnspannfutter.

The indicated cutting data in our guideline table are only valid for use of chucks according to DIN 1835 Form E and hydraulic expansion chucks.

| Werkstoffgruppe Material group | Werkstoff Material | Festigkeit N/mm ² Strength N/mm ² | Schnittgeschwindigkeit / Cutting speed V_c (m/min) | Vorschub pro Umdrehung (mm/U) bezogen auf den Bohrdurchmesser Recommended feed rate (mm per rev.) based on diameter range | | | | |

Richtwerte für den Einsatz der KARNASCH VHM-Hochleistungsbohrer mit Innenkühlung Recommended cutting data for solid carbide twist drill, with interior cooling supply

Die angegebenen Richtwerte für die Schnittgeschwindigkeit V_c sind je nach Bohrtiefe bezogen auf den Durchmesser mit den untenstehenden Korrekturfaktoren KF_v zu multiplizieren.

The indicated standard values for the cutting speed V_c depends on drilling depth related to the diameter to multiply by the correction factor KF_v .

| | | | | | |
|--------|-----|-----|-----|-----|------|
| KF_v | 1xD | 3xD | 5xD | 8xD | 12xD |
| | 1,2 | 0,9 | 0,8 | 0,7 | 0,6 |

Die in den Schnittwerttabellen enthaltenen Richtwerte gelten nur beim Einsatz von Spannfuttern nach DIN 1835 Form E und Hydrodehnspannfutter.

The indicated cutting data in our guideline table are only valid for use of chucks according to DIN 1835 Form E and hydraulic expansion chucks.

| Werkstoffgruppe Material group | Werkstoff Material | Festigkeit N/mm ² Strength N/mm ² | Schnittgeschwindigkeit / Cutting speed V_c (m/min) | Vorschub pro Umdrehung (mm/U) bezogen auf den Bohrdurchmesser Recommended feed rate (mm per rev.) based on diameter range | | | | |

Problembehebung bei VHM-Reibahlen Practical solutions for carbide reaming problems

Wichtige Einsatzkriterien zu Karnasch Hochleistungsreibahlen mit Innenkühlung

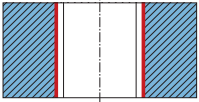

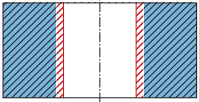

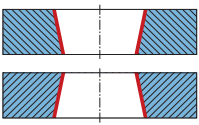

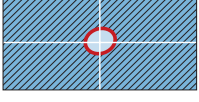

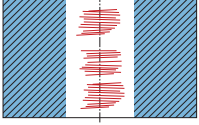

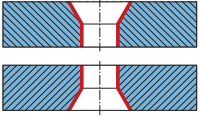

Karnasch Hochleistungsreibahlen mit Innenkühlung sind Werkzeuge für die Feinstbearbeitung und sollten daher in Hydrodehnspannfuttern, Hochgenauigkeitsspannzangen oder im Schrumpffutter aufgenommen werden. Die enorm hohe Rundlaufgenauigkeit, welche mit diesen Werkzeugaufnahmen erreicht werden, kommen dem Bearbeitungsergebnis wesentlich zugute. Karnasch Hochleistungsreibahlen mit Innenkühlung können nach Erreichen des Standzeitendes in der Regel mehrfach nachgeschliffen werden.

Es ist wichtig, die Hochleistungsreibahlen rechtzeitig nachzuschleifen um den Verschleiß zu minimieren und die Produktionssicherheit zu optimieren. Nutzen Sie unser Know-How für Ihre Fertigung. Sollte sich widererwartend ein Bearbeitungsproblem ergeben, haben wir Ihnen einige Punkte zur Problembehebung aufgezeichnet.

Important criteria for the operational application of Karnasch high-performance reamers with internal cooling

Karnasch high-performance reamers with internal cooling are tools for precision finishing and therefore should be received in hydro strain chucks, high-precision collet chucks, or in shrink chucks. The extremely high true-running accuracy which is reached with these tool-receiving sockets is of considerable benefit for the processing result.

Karnasch high-performance reamers with internal cooling can usually be resharpened several times after reaching the end of the dwell time. It is important to resharpen the high-performance reamers in good time in order to minimize the wear and to optimize the production process. Take advantage of our know-how for your production. If, contrary to expectation, there should be processing problems we have listed several steps for the solution of these problems.

| | Problem: | Ursache / Reason: | Lösung / Solution: |
|---|---|--|--|
| 1 |  A. Bohrung ist zu groß Bore too large | <ol style="list-style-type: none"> 1. Werkzeug-\varnothing zu groß – Reamer too big 2. Fluchtung Werkzeug zu Maschine ungenau – Alignment reamer to machine not precise 3. Aufbauschneide – Built up edge 4. Schmierung ungeeignet – Unsuitable coolant 5. Zu wenig Spantiefe – Depth of cut too small | <ol style="list-style-type: none"> 1. Ausgleichhalter einsetzen – Use compensation chuck 2. Flucht korrigieren bzw. Ausgleichs- oder Pendelhalter einsetzen – Correct alignment or insert compensation or floating chuck 3/4. Anderen Kühlschmierstoff wählen – Select a different coolant 5. Kleine Reibahle, eventl. im \varnothing kleiner läppen – Small reamer, lapping with smaller \varnothing if necessary |
| 2 |  B. Bohrung zu klein Bore too small | <ol style="list-style-type: none"> 1. Werkzeug verschlissen – Worn reamer 2. Kühlschmiermittel ungeeignet – Wrong coolant 3. Zu geringe Spantiefe – Depth of cut too small 4. Werkstück verspannt – Deformation through fixation of the work piece | <ol style="list-style-type: none"> 1. Neues Werkzeug verwenden – Use new reamer 2. Kühlschmiermittel wechseln – Change coolant 3. Reibzugabe ändern – Change reaming allowance 4. Spannsystem überprüfen – Check the clamping system |

Reibahlen – Herstellungstoleranzen Auszug aus DIN 1420
Reamers – manufacturing tolerances Excerpt from DIN 1420

1. Grundsätzliches zur Festlegung der Herstellungstoleranz

Die in dieser Norm angegebenen Herstellungstoleranzen sind bestimmten Toleranzfeldern der zu reibenden Löchern zugeordnet. Sie gewährleisten im allgemeinen, dass das geriebene Loch innerhalb des zugehörigen Toleranzfeldes liegt und das gleichzeitig die Reibahle wirtschaftlich ausgenutzt werden kann.

Es ist jedoch zu berücksichtigen, dass die Größe des geriebenen Loches außer von der Herstellungstoleranz der Reibahle noch von anderen Faktoren abhängt, z.B. von den Winkeln an der Schneide, vom Anschnitt der Reibahle, von der Aufspannung des Werkstückes, von der Werkzeugaufnahme, vom Zustand der Werkzeugmaschine, von der Schmierung und vom Werkstoff des Werkstückes, in dem gerieben wird. Demzufolge können Sonderfälle auftreten, in denen andere Herstellungstoleranzen günstiger sind.

Mit Rücksicht auf eine wirtschaftliche Herstellung und Lagerhaltung sowie auf die Austauschbarkeit von Reibahlen verschiedener Hersteller sollten jedoch nur in wirklich begründeten Sonderfällen andere Herstellungstoleranzen gefordert werden.

2. Ermittlung der zulässigen Größt- und Kleinstdmaße von Reibahlen

Der zulässige größte Durchmesser d_1 max. der Reibahle liegt um 15% der jeweiligen Bohrungs-Toleranz (0,15 IT) unter dem zulässigen Größtmaß der Bohrung (siehe Bild). Hierbei wird der Wert 0,15 IT auf dem nächst größeren ganzzahligen oder halben μm -Wert gerundet, so dass für d_1 max. glatte μm -Werte entstehen. Der zulässige kleinste Durchmesser d_1 min. der Reibahle liegt bei 35% der jeweiligen Bohrungs-Toleranz (0,35 IT) unter dem zulässigen Größtmaß der Bohrung d_1 max.

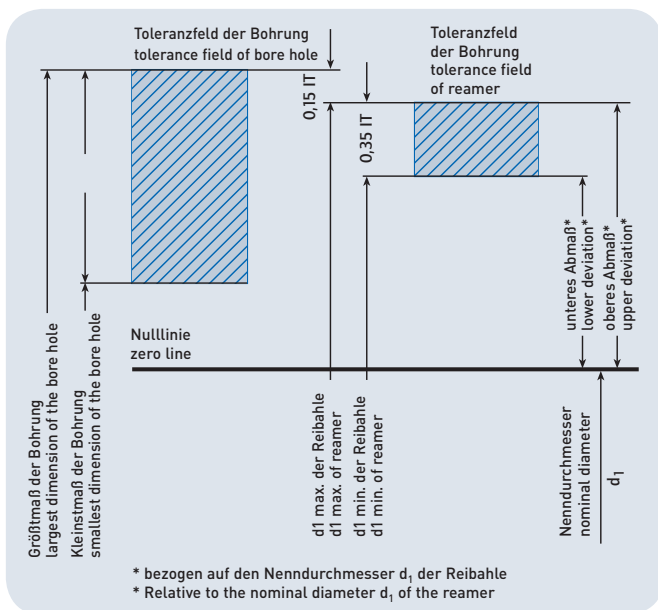

3. Vereinfachte Ermittlung der zulässigen Größt- und Kleinstdmaße von Reibahlen

Um das Rechnen zu vereinfachen, sind für die gebräuchlichsten Toleranzfelder die oberen und unteren Abmaße vom Nenndurchmesser d_1 der Reibahle in den Tabellen auf der folgenden Seite aufgeführt. Mit Hilfe dieser Abmaße können die zulässigen Größt- und Kleinstdmaße der Reibahlen auf einfachste Weise errechnet werden.

4. Bezeichnung (Auszug)

Werden in Sonderfällen Reibahlen mit von dieser Norm abweichenden Größt- und Kleinstdmaßen bestellt, so ist in der Bezeichnung an Stelle des ISO-Kurzzeichens für das Bohrungstoleranzfeld das obere und untere Abmaß der Reibahle in μm anzugeben, z.B. für eine Reibahle mit Nenndurchmesser 20 mm, oberes Abmaß = + 15 μm : Reibahle 20p 25 p 15 p DIN...

In der Bezeichnung wird an Stelle des Pluszeichens ein p und an Stelle des Minuszeichens ein m gesetzt, weil die Zeichen "+" und "-" sich nicht auf allen Maschinen, insbesondere der Daten verarbeitenden Maschinen, schreiben lassen.

1. Basic principles for determining manufacturing tolerance

The manufacturing tolerances specified in this standard are assigned to specific tolerance fields of the holes to be reamed. These tolerances ensure in general that the reamed hole will be within the relevant tolerance field while also guaranteeing economical use of the reamer.

It must be considered, however, that the size of the reamed hole could still be outside the manufacturing tolerance of the reamer because of other factors, for example the angles on the cutting edges, the cut of the reamer, the way the workpiece is clamped, the tool receiving socket, condition of the tool machine, lubrication, or the material of the workpiece being reamed.

Because of this, special cases may arise where other manufacturing tolerances are more favorable.

In consideration of economical production and storage as well as replaceability of reamers made by different manufacturers, however, other manufacturing tolerances should only be used in special cases with real justification.

2. Determining the largest and smallest permissible dimensions of reamers

The largest permissible diameter d_1 max. of the reamer is 15% of the corresponding bore hole tolerance (0.15 IT), taking into account the largest permissible dimension of the bore hole (see picture).

The value of 0.15 IT is rounded up to the next greater whole-number or half μm value. This results in a smooth series of μm values for d_1 . The smallest permissible diameter d_1 min. of the reamer is 35% of the relevant bore hole tolerance (0.35 IT) below the largest permissible reamer diameter d_1 max.

3. Simplified determination of the largest and smallest permissible dimensions of reamers

To simplify calculations, the upper and lower deviations from the nominal diameter d_1 of the reamer for the most commonly used tolerance fields is shown in the tables on the following pages. Using these dimensional deviations, you can calculate the largest and smallest permissible dimensions of reamers quickly and easily.

4. Designation (excerpt)

If reamers are ordered in special cases with largest and smallest dimensions that deviate from this standard, the upper and lower deviations of the reamer must be indicated in the designation in μm instead of the ISO abbreviation for the bore hole tolerance field. For example, for a reamer with a nominal diameter of 20 mm, upper deviation = + 15 μm : Reamer 20p 25 p 15 p DIN...

A p is used in the designation instead of the plus sign and an m instead of the minus sign. This is because the symbols "+" and "-" cannot be written on all machines, especially the data for processing machines.

Einsatz von Kühlschmierstoffen

Beim Reiben sollte – wenn möglich – immer ein Kühlschmierstoff eingesetzt werden. Dieser erfüllt zugleich Kühl- und Schmierfunktionen, wobei beim Reiben bei niedrigen Schnittgeschwindigkeiten die Schmierung die wichtigste Funktion einnimmt.

Die Anforderungen, die an Kühlschmierstoffe gestellt werden:

- Die Reduktion der Reibung zwischen Span und Werkzeug, sowie zwischen Rundschliff-Fase und Bohrungswand
- Wegspülen von Spänen und Abriebteilchen
- Abführen von Wärme

Für das Reiben gelangen vorwiegend wassermischbare Kühlschmierstoffe, materialbedingt auch Luft, Öl und Petroleum zum Einsatz.

Insertion of Coolant

A cooling lubricant should always be used when cutting. This fulfils a cooling and lubricating function at the same time, when lubrication being the most important function when cutting at low cutting speeds.

The demands made on cooling lubricants:

- Reduction of the friction between metal chips and tool and between the cylindrical grinding bevel and bore-hole wall
- Washing away chippings and filings
- Dissipation of heat

Water miscible cooling lubricants are used primarily for cutting although cutting oils can also be used in exceptional cases.

Ungleiche Teilung und extrem-ungleich Teilung für Karnasch Reibahlen
Uneven spacing and extremely uneven spacing for Karnasch reamers

Standard Ungleich-Teilung / Unequal graduation

Standard-Reibahlen werden in normaler Ungleich-Teilung geliefert.
Unequal graduation and extreme unequal graduation.

| Nenn Ø-Bereich Nom. range of dia. | Z | Teilung graduation |
|--------------------------------------|---|-----------------------|
| 0,5 - 1,9 | 3 | 120°/120°/120 |
| 1,9 - 2,65 | 4 | 93°/87° |
| 2,65 - 13,2 | 6 | 63°/60°/57° |
| 13,2 - 20,3 | 8 | 47°/43°/47°/43° |

Extrem Ungleich-Teilung / Extreme unequal graduation

Extrem ungleiche Teilungen ermöglichen die Fertigung von Bohrungen hoher Kreisformgenauigkeit, mit einem maximalen Kreisformfehler von 1-3 µm und eine ISO-Passungsgenauigkeit von nahezu IT 05.

Extremely unequal graduation make it possible to make boreholes of high circularity precision with a maximum circularity deviation of 1-3 µm and an ISO fitting exactness of almost IT 0,5.

Bearbeitungshinweise:

- Vorausgesetzt, es werden stabile Maschinenverhältnisse und einwandfreie Werkzeugaufnahmen verwendet (Schrumpffutter)
- Um optimale Schnittbedingungen zu erreichen sind die Einsatzbedingungen vor Ort zu berücksichtigen.

Processing instruction:

- Assumed there are rugged machine conditions and faultless die holder in use.
- To reach optimal cut conditions, the insert terms on location are to consider.

Karnasch – Ein Begriff für Qualität und Präzision seit über 55 Jahren.

Im badischen Heddeshheim wurde das Unternehmen 1961 gegründet und erwarb sich einen hervorragenden Ruf in der Herstellung und Vertrieb herausragender Hochleistungswerkzeuge. Bei der Produktion werden ausschließlich die besten und neuesten Technologien verwendet.

Mit der Eröffnung einer Niederlassung in Brandenburg 1992 wurde frühzeitig auf gesamtdeutsche Präsenz gesetzt. Heute ist Karnasch Professional Tools ein weltweit agierendes Unternehmen mit Vertriebspartnern in 58 verschiedenen Ländern. Kundenbetreuung, Beratung und die kompetente Hilfe bei fachlichen Problemen sind Grundsteine einer dauerhaften Partnerschaft. Diese Grundsteine wurden durch Einführung einer Service-Hotline weiterhin vertieft.

Durch intelligente Lagerhaltung garantieren wir jederzeit sofortige Lieferbarkeit unserer Produkte.

Karnasch – a definition for quality and precision since 55 years.

The company was founded in 1961 in Heddeshheim (Baden) and aquired an excellent reputation concerning the production and the sales of pre-eminent top-class tools. At the production we are using only the best and the latest technologies.

By opening our office in Brandenburg in 1992, we have focused early on a presence all over Germany.

Today Karnasch Professional Tools is a global acting company with distribution partners in 58 different countries.

Customer service, consultation and competent help in case of technical problems are the base for a durable partnership. These base were reinforced by the introduction of a Service-Hotline.

By an intelligent storekeeping we assure the immediate delivery of our products at any time.

Hinweise zum sicheren Umgang mit VHM-Werkzeugen

1. Allgemeine Hinweise

Karnasch Werkzeugverpackungen sind mit allgemeinen Sicherheitswarnungen versehen. Es können nur allgemeine Sicherheitshinweise aufgebracht werden. Wir empfehlen Ihnen dringend die Sicherheitshinweise und Vorschriften auf dieser Seite eingehend zu lesen. Zusätzlich sollten alle Mitarbeiter im Rahmen einer Sicherheitsunterweisung auf mögliche Gefahren im Umgang mit Hartmetallwerkzeugen unterwiesen werden.

2. Vorschläge zum Umgang von Schneidwerkzeuge

| Gefahren | Maßnahmen |
|---|---|
| <ul style="list-style-type: none"> Hartmetallwerkzeuge haben scharfe Schneiden. Die Handhabung kann zu Verletzungen führen. | <ul style="list-style-type: none"> Tragen Sie Schutzhandschuhe beim hantieren von Hartmetallwerkzeugen. |
| <ul style="list-style-type: none"> Hartmetallwerkzeuge und Werkstücke können während der Bearbeitung sehr heiß werden. Das Berühren mit bloßen Händen kann zu Verbrennungen führen. Beim Fräsen können heiße Späne entstehen die Verletzungen und Verbrennungen zur Folge haben können. | <ul style="list-style-type: none"> Tragen Sie Schutzhandschuhe. Stellen Sie sicher, dass die Schutztüren an den Maschinen geschlossen sind und das Schutzbrillen getragen werden. Beim Reinigen der Maschinen muss sichergestellt sein, dass die Maschine nicht mehr läuft und das Handschuhe getragen werden. |
| <ul style="list-style-type: none"> Heiße Späne, Funken und Hitzeentwicklung beim Fräsen (z.B. verursacht bei Werkzeugbruch) können zum Entfachen eines Feuers führen. Der Einsatz von Schneidwerkzeugen bei ungeeigneten Einsatzbedingungen oder Schnittdaten sowie von ungeeigneten Werkzeugen, kann zu einem Werkzeugbruch führen und Verletzungen verursachen. | <ul style="list-style-type: none"> Vermeiden Sie den Einsatz von Fräswerkzeugen in leichtentzündlichen Umgebungen. Für den Fall das keine Kühlflüssigkeit beim fräsen verwendet wird, stellen Sie sicher, dass Feuerverhütungsmaßnahmen ergriffen werden. Stellen Sie sicher, dass die Schutztüren an den Maschinen stets geschlossen sind und Schutzbrillen getragen werden. Beachten Sie die Verwendungshinweise sowie die empfohlenen Schnittdaten. |
| <ul style="list-style-type: none"> Stoßlasten sowie stark erhöhte Schnittkräfte führen zu starkem Verschleiß was einen Werkzeugbruch zur Folge haben kann. Dies kann zu Verletzungen durch umherfliegende Teile führen. Microwerkzeuge haben einen sehr kleinen Werkzeugdurchmesser und sind sehr spitz. Bei unvorsichtiger Handhabung, können diese die Haut durchstechen und zu Verletzungen führen. | <ul style="list-style-type: none"> Stellen Sie sicher, dass die Schutztüren stets geschlossen sind und Schutzbrillen getragen werden. Wechseln Sie die Werkzeuge bevor ein übermäßiger Verschleiß entsteht. Gehen Sie immer sehr vorsichtig mit Microwerkzeugen um und tragen Sie stets geeignete Schutzhandschuhe und Schutzkleidung. |
| <ul style="list-style-type: none"> Beim Hochgeschwindigkeitsfräsen können durch die Zentrifugalkraft einzelne Teile oder Späne aus der Maschine geschleudert werden. Dies kann Verletzungen verursachen. Spindeln mit zu hohen Rundlauffehler oder Werkzeuge die außermittig gespannt sind sowie Werkstücke die unzureichend gespannt sind, können zu Vibrationen führen die Ausbrüche verursachen und zum Werkzeugbruch führen können. Dies kann zu Verletzungen führen. Scheidwerkzeuge müssen immer fest in den Aufnahmen eingespannt sein. Ist dies nicht der Fall, besteht die Gefahr, dass diese sich lösen und eine erhöhte Verletzungsgefahr darstellen. | <ul style="list-style-type: none"> Stellen Sie sicher, dass die Schutztüren an den Maschinen stets geschlossen sind und Schutzbrillen sowie Schutzkleidung getragen wird. Setzen Sie die Werkzeuge mit den empfohlenen Schnittdaten ein. Überprüfen Sie den Rundlauf der Spindel sowie die Werkzeugaufnahmen in regelmäßigen Abständen und verwenden Sie die Werkzeuge mit den empfohlenen Schnittdaten. Stellen Sie sicher, dass die Werkzeugaufnahmen stets sauber und unbeschädigt sind. Überprüfen Sie, ob das Werkzeug fest eingespannt ist, bevor Sie es verwenden. Verwenden Sie ausschließlich die für die Werkzeuge empfohlenen Spannvorrichtungen. |
| <ul style="list-style-type: none"> Werkzeuge die zu fest in der Werkzeugaufnahme eingespannt werden, können brechen und Verletzungen hervorrufen. Das Bearbeiten von Werkstücken mit Frässtiften von Hand kann zu Verletzungen führen. Maschinen und Werkzeuge können beschädigt werden falls Schneidwerkzeuge für Zwecke eingesetzt werden für die Sie nicht bestimmt sind. | <ul style="list-style-type: none"> Verwenden Sie ausschließlich die zum Einspannen der Werkzeuge vorgeschriebenen Werkzeuge und Daten. Tragen Sie Schutzkleidung sowie Schutzbrillen. Verwenden Sie die Werkzeuge ausschließlich für ihren bestimmten Zweck. |

Information:

Dieser Katalog beinhaltet die wichtigsten Angaben zum Umgang mit unseren Werkzeugen. Für weitere Informationen bitten wir Sie uns zu kontaktieren. Wir sind für keine Unfälle verantwortlich zu machen die aufgrund von Änderungen an unseren Werkzeugen eingetreten sind und ohne unsere Zustimmung vorgenommen wurden.

Tragen Sie stets geeignete Schutzkleidung und Sicherheitsausrüstung!

Safety information on how to use cutting tools

1. Basic informations

Karnasch packages are labeled with general safety information. The tools are not labelled with detailed warning instructions. We suggest to read our safety information and instructions before handling cutting tools. Furthermore, as a part of your workers safety briefing, please notify the contents of the safety information to all your workers.

2. Suggestions how to use cutting tools

| Hazard | Counteraction |
|---|--|
| <ul style="list-style-type: none"> Solid carbide tools have sharp edges. Handling them with bare hand may cause injuries. | <ul style="list-style-type: none"> Wear protective gloves when handling tools. |
| <ul style="list-style-type: none"> Cutting tools and workpieces can become extremely hot during machining. Touching them with bare hand may cause burns. | <ul style="list-style-type: none"> Wear protective gloves. |
| <ul style="list-style-type: none"> Hot chips produced during the cutting process may cause burns and injuries. | <ul style="list-style-type: none"> Make sure, that the guard doors are closed on the machine and protection goggles are used. During machine cleaning ensure the machine is stopped and wear protection gloves. |
| <ul style="list-style-type: none"> Hot chips, sparks and heat generation during the cutting process (e.g. by tool breakage) provides a risk of igniting a fire. | <ul style="list-style-type: none"> Avoid using cutting tools in environments where there is a possibility of igniting fire. If it is not possible to use a cooling lubricant, make sure to have a fire prevention countermeasure. |
| <ul style="list-style-type: none"> The use of cutting tools with inappropriate cutting conditions or inappropriate cutting tools may cause the tool to break and providing risk of injuries. | <ul style="list-style-type: none"> Make sure, that the guard doors are closed on the machine and protection goggles are used. Use cutting tools under recommended cutting conditions. |
| <ul style="list-style-type: none"> Impact load and rapid increase of cutting forces to excessive wear may cause the tool to break. This provides a risk of injuries. | <ul style="list-style-type: none"> Make sure, that the guard doors are closed on the machine and protection goggles are used. Change tools before excessive wear occurs. |
| <ul style="list-style-type: none"> Microtools have a extremely small diameter with a very sharp point which may puncture the skin if not handled carefully. | <ul style="list-style-type: none"> Handle Microtools always with care and wear always suitable gloves. |
| <ul style="list-style-type: none"> During High speed cutting spare parts and chips may be expelled due to centrifugal forces. This may cause injuries. | <ul style="list-style-type: none"> Make sure, that the guard doors are closed on the machine and protection goggles and protective clothes are worn. |
| <ul style="list-style-type: none"> Poor balanced spindles or off centred revolving of tools and workpieces which are poor fixed may cause vibrations and chattering which could cause the tool to break. | <ul style="list-style-type: none"> Adjust accuracy and balance of spindles and check the clamping of the workpiece to prevent off centre revolving and chattering. Use cutting tools under recommended cutting conditions. |
| <ul style="list-style-type: none"> If cutting tools are not held securely, they may become loose and producing risk of injuries. | <ul style="list-style-type: none"> Make sure, that chucks are always clean and without damages. Always check if the tool is clamped safely in the chucks before you use the tools. Only use parts which are suitable. |
| <ul style="list-style-type: none"> Clamping cutting tools to tightly may cause them to break which may cause injuries. | <ul style="list-style-type: none"> Only use the recommended tools for clamping cutting under recommended conditions. |
| <ul style="list-style-type: none"> Machining parts with burrs using bare hands may cause injuries. | <ul style="list-style-type: none"> Wear safety clothe, safety goggles and safety gloves. |
| <ul style="list-style-type: none"> Machines and tools could be damaged if they used for purposes other than the prescribed applications. | <ul style="list-style-type: none"> Use them strictly and only for the prescribed application. |

Information:

This catalogue contains the basic information for safety handling of our cutting tools. For further information, please contact us. We are not responsible for any accidents causing by modifying tools without our permission.

Always wear suitable safety cloth and safety equipment!

Berechnung von Schnittgeschwindigkeit, Drehzahl, Vorschubgeschwindigkeit und Vorschub pro Zahn Calculation of cutting speed, rpm, feed speed and feed per tooth

Zeitspanvolumen
Time-chip volume

$$Q = \frac{a_e \cdot a_p \cdot Vf}{1000} \quad (\text{cm}^3/\text{min})$$

a_e = Zeilensprung/Pitch

Schnittgeschwindigkeit u. Drehzahl – Kopierfräsen Cutting speed and rpm – Copying milling

$$Vc = \frac{n \cdot n \cdot a_e}{1000} \quad (\text{m/min})$$

$$n = \frac{Vc \cdot 1000}{n \cdot a_e} \quad (\text{m/min})$$

$$a_e = 2 \cdot \sqrt{a_p (d_1 - a_p)} \quad (\text{mm})$$

a_p = Schnitttiefe/Depth

Index

1. Vorkörnen bei Kernbohrern

Bei Kernbohrer Durchmesser 12-15 mm ist es absolut notwendig einen starken Körnerpunkt zu setzen. Es ist darauf zu achten, dass die Spitze des Auswerferstiftes exakt mittig auf dem Körnerpunkt aufsitzt. Sehr empfehlenswert auch bei allen anderen Durchmessern. Das gleiche gilt für die Power-Max-Serie HM-Lochsägen bei Anwendung als Kernbohrer mit Auswerferstiften. Das Spindelspiel der Maschine muss einwandfrei sein für Kernbohrer/Lochsägen Durchmesser 12-15 mm.

2. Drehzahlen für Kernbohrer/Lochsägen

Bei HSS-Kernbohrer 12-15 mm muss eine Mindestdrehzahl von 450 U./min. eingehalten werden. Für HM-Kernbohrer wäre Minimum ca. 600 U./min. optimal. Ist dies nicht möglich muss mit halbem Vorschub gearbeitet werden (Vorschübe und Drehzahlen siehe Seite 1295-1297 / 1312).

3. Vorschub

Unbedingt vorsichtig und langsam 1 mm tief anbohren. Anschließend kann mit normalem Vorschub weitergearbeitet werden (Vorschübe siehe Seite 1297). Dieser Vorgang ist absolut notwendig bei Durchmessern 12-15 mm. Sehr empfehlenswert bei allen anderen Durchmessern. Beherzigen Sie bitte diesen Vorgang. Es erhöht die Standzeit des Bohrers wesentlich.

4. Bohren

Je nach Spanablauf ist der Bohrer öfters zu lüften. Dies gilt insbesondere bei Schnitttiefen ab ca. 25 mm. Spüren Sie z. B. einen größeren Widerstand oder Rattern bitte sofort wie folgt vorgehen:

- Im laufenden Zustand aus dem Bohrloch hinausfahren.
- Bohrer und Bohrloch von Spänen säubern (z. B. mit Karnasch Druckflasche Art. 20 1308/20 1327 auf Seite 528).
- Bohrloch mit Kühl- oder Schmieremulsion füllen (siehe Karnasch-Schneidöle ab Seite 1143).
- Wieder im laufenden Zustand langsam und vorsichtig in das bereits vorhandene Loch hineinfahren. Während diesem gesamten Vorgang darf der Standort der Maschine oder des Werkstückes nicht verändert werden. Also z. B. den Magnet der Kernbohrmaschine nicht ausschalten.
- Je nach Spanablauf und Bohrtiefe ist dieser Vorgang mehrmals zu wiederholen.

5. Kühlung

Verwenden Sie nur Hochleistungsschneidöle (Karnasch-Schneidöle siehe ab Seite 1143). Kontinuierliche Kühlung während des gesamten Bohrvorgangs ist empfehlenswert. Ab ca. 35 mm Durchmesser nur Morsekonusaufnahmen mit automatischer Innenkühlung verwenden (Morsekonusaufnahmen siehe Seite 521-523).

1. Center punch with annular cutters

For annular cutters with a diameter of 12-15 mm it is absolutely necessary to set a strong center mark. See that the tip of the ejector pin is set exactly in the middle of the center mark. Highly recommendable also with all other diameters. The same applies for the Power Max carbide tipped hole saws with usage as annular cutters with ejector pins. The spindle tolerances of the machine must be in good condition for annular cutters / T.C.T. hole saws diameter 12-15 mm (do not use old, worn out machines for these diameter).

2. Speeds for annular cutters/hole saws

With HSS annular cutters 12-15 the minimum speed is 450 rev/min. For carbide annular cutters a minimum speed of 600 rev/min is optimal. In case this is not possible, it is recommended to work with half the feed (feeds and speeds see pages 1295-1297 / 1312).

3. Feed

Slowly and cautiously drill 1 mm deep. Then proceed with normal feed (feeds see page 1297). This procedure is absolutely necessary for diameters of 12-15 mm. Highly recommendable with all other diameters. Please heed this procedure. It significantly extends the drill's durability.

4. Drilling

It may be necessary to ventilate the drill depending on the chip flow. This especially applies for cutting depths of approx. 25 mm. In case you feel a higher resistance or in case of clattering please immediately proceed as follows:

- Exit the borehole while drill is turning.
- Free drill and borehole from chips (e. g. with Karnasch pressure bottle art. 20 1308/20 1327 on page 528).
- Fill borehole with cooling and lubricating emulsion (see Karnasch cutting oils from page 1143).
- Insert the drill into the borehole while drill is turning. During the entire process, the position of the machine or the workpiece must not be changed. So do not switch off e.g. the magnet of the core drilling machine.
- This procedure has to be repeated according to the chip flow and drilling depth.

5. Cooling

Use only heavy-duty cutting oils (Karnasch cutting oils see from page 1143). We recommend continuous cooling during the entire drilling process. Use tool holders with internal cooling only for dia. 35 mm and more. (Tool holders see pages 521-523).

GENAUIGKEIT DER BOHRUNG / FERTIGUNGSTOLERANZEN DER KERNDREHNER PRECISION OF THE BOREHOLE / PRODUCTION TOLERANCES OF THE CORE DRILLS

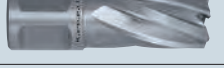

Die Genauigkeit der Bohrung ist abhängig von den Toleranzen der Kernbohrer und der Präzision der Maschine (Spindel). Kernbohrer werden hauptsächlich auf Magnet-Kernbohrmaschinen eingesetzt welche größtenteils hohe Spindel-Toleranzen aufweisen. In der Regel werden daher dort die Bohrungen etwas größer als der Durchmesser des Kernbohrers. Aus diesem Grunde werden die Kernbohrer in Minus-Toleranzen gefertigt (siehe Tabelle). Sollten Kernbohrer auf hochpräzisen Spindeln eingesetzt werden, ist ein Untermaß möglich.

The accuracy of the hole depends on the tolerances of the annular cutters and the precision of the machine (spindle). Core drills are mainly used on magnetic hole cutting machines which mostly have high spindle tolerances. Therefore, the holes are usually slightly larger than the diameter of the core drill. For this reason, the core drills are manufactured in minus tolerances (see table). If holes are made with an annular cutter on high-precision spindle machines, an undersize is therefore possible.

Durchmessertoleranz · Tolerance of outer diameter

| Durchmesser · Diameter | Toleranz · Tolerance |

1. Korrekte Schnittgeschwindigkeit

Die beste Schnittgeschwindigkeit zum Bohren von Hardox liegt Vc zwischen 30 bis 35 m/min

Erklärung:

Falsche Schnittgeschwindigkeit ist der häufigste Fehler beim Bohren von HARDOX. Die Härte von HARDOX 400-500 ist sehr hoch. Oftmals reduziert daher der Anwender die Drehzahl, was leider falsch ist. Bei Schnittgeschwindigkeiten um Vc. 10 m/min kann z.B. keine Bohrung realisiert werden.

2. Empfehlung Vorschub

| Durchmesser Vf | (mm/min) | fz (mm/r) |
|----------------|----------|-----------|
| Ø 14-18 | 21-27 | 0,03-0,06 |
| Ø 19-25 | 24-30 | 0,04-0,07 |
| Ø 26-30 | 21-27 | 0,05-0,07 |
| Ø 31-36 | 18-24 | 0,05-0,08 |

Anwendungsbeispiel:

HARDOX Kernbohrer Durchmesser 18 mm in HARDOX-Platte Stärke 12 mm mit Vf = 24 mm/min.
Der Anwender muss in ca. 30 Sekunden die Bohrung getätigt haben.

Erklärung:

Am wichtigsten ist der Vorschub wegen der Härte / Zähigkeit und des hohen Mangananteils von HARDOX.
Ist der Vorschub zu gering gewählt schleifen/kratzen die Zähne des Bohrers an dem Material und verschleifen extrem schnell.

3. Kühlung

3.1. Bohren von HARDOX bis 12 mm: Bohrung ohne Kühlung möglich. Mit Kühlung erhöht die Standzeit. Verwenden Sie zur Kühlung nur ölhaltige Kühlmittel ohne Wasseranteile wie zum Beispiel: Karnasch Mecutoil 100 pur ohne Wasser oder pflanzliche Öle.

3.2. Bohren von HARDOX über 12 mm: Hier muss gekühlt werden. Verwenden Sie zur Kühlung nur ölhaltige Kühlmittel ohne Wasseranteile wie zum Beispiel: Karnasch Mecutoil 100 pur ohne Wasser oder pflanzliche Öle.

3.3. Die Zähne des Kernbohrers werden extrem heiß während des Bohrvorgangs in HARDOX (Späne leuchten rot-sichtbar im dunklen). Kühlmittel mit Wasseranteile erzeugen Risse an den Zähnen des Bohrers. Die Standzeit wird dabei erheblich reduziert.

1. Requirement of speed

The best line speed for HARDOX annular cutters is Vc between 30 up to 35 m/min

Explanation:

Wrong speed is the most common mistake operator do especially in combination with HARDOX steel. HARDOX steel 400-500 is very hard. Most operator thinks the harder the steel the lower should be the speed. This is exactly wrong with HARDOX steel. When using too low speed such as Vc 10 m/min cutting holes is almost not possible.

2. Recommended feed

| Diameter Vf | (mm/min) | fz (mm/r) |
|-------------|----------|-----------|
| Ø 14-18 | 21-27 | 0.03-0.06 |
| Ø 19-25 | 24-30 | 0.04-0.07 |
| Ø 26-30 | 21-27 | 0.05-0.07 |
| Ø 31-36 | 18-24 | 0.05-0.08 |

Application example:

HARDOX annular cutter diameter 18 mm cutting in HARDOX plate 12 mm with Vf = 24 mm/min.
Hole has to be done in approx. 30 seconds.

Explanation:

Feed is the key point, because hardness of HARDOX steel is tough and also with high manganese content.
If cutting with low feed, the cutting edges will slip in place and will wear out quickly.

3. Requirement of cooling

3.1. When cutting Hardox steel plate ≤12 mm thickness, operator can choose dry cutting. Using oily coolant (vegetable oil) for cooling will have better effect.

3.2. When cutting Hardox steel plate >12mm thickness, operator must choose oily coolant (vegetable oil) for cooling.

3.3. Aqueous coolant is not recommended because the temperature of Hardox cutter is very high during cutting. The removed chips are red (visible at night). Using aqueous coolant will cause crack for the teeth of Hardox cutter and shorten the tool life of Hardox cutter.

4. Empfohlene Schnittwerte, sowie Empfehlung entfernen der Späne für HARDOX-LINE Kernbohrer Art. 20 1680 / 20 1690

Erklärung:

Die Späne windet sich um den Kernbohrer. Der Anwender folgt obige Empfehlung „Entfernen der Späne“. Die Magnet-Kernbohrmaschine ist hierfür auszuschalten. Die Späne um den Kernbohrer sind zu entfernen. Danach die Kernbohrmaschine wieder einschalten und weiterbohren. Wird dies nicht beachtet blockieren die Späne den Spanfluss. Die Zähne bekommen Risse und verschleifen. Der Bohrer hat somit keine Standzeit.

Explanation:

The removed chips wind around the annular cutter. The operator must follow the above recommended parameter regarding chip removal. Operator should shut down the magnetic drilling machines and remove the chips around the annular cutter. Than re-start. Without removing chips will result block of chips and crack of teeth.

ANWENDUNGSRICHTLINIEN

- Wählen Sie immer den möglichst kürzesten Halter.
- Beachten Sie, dass der Halter sicher gespannt ist und der Rundlauffehler 0,02 bis 0,07 mm nicht übersteigt.
- Der Außendurchmesser des Einsatzes muss mindestens 0,3 mm größer sein als der Halterdurchmesser.
- Empfohlenes Grundmaterial für Einsätze: Siehe Seite 1304
- Empfohlene Schnittgeschwindigkeit / Vorschub: Siehe Seite 1305
- Minimaler Kühlmittelbedarf: Siehe Seite 1307
- Benötigte Antriebsleistung, Vorschubkraft: Bitte fragen Sie uns bei Bedarf an.

Die angegebenen Schnittwerte gelten als **Richtwerte** für den allgemeinen Anwendungsfall. Maschinen- und Werkstückstabilität werden nicht berücksichtigt.

Die besten Ergebnisse erzielen Sie unter folgenden Voraussetzungen:

- Zuerst eine Pilotbohrung 1× Durchmesser tief bohren
- Späne sollten kurz und keine Verfärbungen aufweisen – keinesfalls strohfarben oder blau (falls doch siehe Tabelle „Problemlöser“ Seite 1308-1309)
- Bohrung messen. Falls Bohrungstoleranz in Ordnung kann weitergebohrt werden. Falls nicht siehe Tabelle „Problemlöser“ Seite 1308-1309
- Der Bohrungsprozess sollte ruhig und ohne Spänestau sein. Falls es zum Spänestau kommt den Bohrprozess anhalten und Tabelle „Problemlöser“ Seite 1308-1309 beachten.

Die besten Ergebnisse bei extrem langen Haltern 12×D, 15×D erhalten Sie unter folgenden Voraussetzungen:

- Zuerst eine Pilotbohrung mit dem benötigten Durchmesser, aber mit einem möglichst kurzen Halter mit Bohrtiefe 2-3× Durchmesser fertigen.
- Mit den extrem langen Haltern 12×D oder 15×D in die Pilotbohrung einbohren. Die Spindel soll entweder still stehen oder mit niedriger Drehzahl (max. 20 U/min) in das vorhandene Bohrloch eintauchen. **Niemals hochtourig drehend an das Werkstück ansetzen oder fortfahren ohne das Sie völlig in den Werkstoff oder Teil eingreifen. Es besteht Bruch- und Verletzungsgefahr.**
- Schnittdaten gemäß Tabellen erhöhen. Kontrollieren Sie, ob die Späne kurz sind und keine Verfärbungen aufweisen. Zu beachten ist weiterhin, dass die Späne mit dem Kühlmittel entlang der Bohrung abgeführt werden. Bei Problemen siehe Tabelle „Problemlöser“ Seite 1308-1309
- Am Ende des Bohrzyklus den Halter aus der Bohrung nicht mit voller Drehzahl ausfahren, sondern im Stillstand oder mit maximaler Spindeldrehzahl von 20 U/min hinausfahren.
- **Hartmetall-Einsätze sollten auf Haltern 12×D und 15×D nicht eingesetzt werden ohne vorher Karnasch über die Einsatzbedingungen konsultiert zu haben.**

Einsätze auf Halter montieren

- Die Einsätze haben eine Positionierungs-Nut (A). Die Halter haben dafür einen vorgesehenen Positionierungs-Stift. Beides bündig zusammenstecken und mit den mitgelieferten TORX Schrauben festziehen. Werte für das Drehmoment der Schrauben siehe Seite 309
- Bei Bedarf kann auf die TORX Schrauben eine Korrosionsschutzpaste aufgetragen werden z.B. NEVER SEEZ
- Der Plattensitz soll sauber, frei von Späne und ohne Beschädigung sein.

GUIDLINE FOR USE

- Take the shortest holder possible for the application.
- Be sure that the holder is held securely and is within 0,02 up to 0,07 mm of centerline.
- Ensure that the insert outer diameter is a minimum 0,3 mm larger than the holder body diameter.
- Recommended base material of inserts: see page 1304
- Recommended cutting speed and feed: see page 1305
- Minimum coolant requirements: see page 1307
- Machine power / thrust requirements: please ask us if required.

The mentioned cutting parameters are only **guidelines** and make no allowance for machine or component rigidity.

Follow below drilling process for best results:

- Drill a short hole 1×diameter deep initially.
- The chips should be short in length, self colored, not bright or blue. (If not self colored see table "PROBLEM SOLVER" page 1310-1311)
- Measure the hole produced. If the hole is within the desired tolerance go on with the drilling process. If not see table "PROBLEM SOLVER" page 1310-1311
- Take care that the drilling process is quiet and smooth with no chip packing. If chip packing happens stop drilling process and see table "PROBLEM SOLVER" page 1310-1311

Follow below drilling process if using extended length holder 12×D, 15×D for best results:

- Drill a pilot hole using the same diameter drill insert in a **short** holder to a depth of 2-3 times the diameter deep.
- Enter the pilot hole with the 12×D or 15×D holder without spindle speed at all or at low rpm (10-20). **Never start or continue rotating of a 12×D, 15×D holder without proper engagement within a work piece or fixture. Disregarding could result in tool failure and/or body injury.**
- Increase speed and feed to recommended data in table. The chips should be short in length, self colored, not bright or blue. Furthermore take care that chips are being evacuated by coolant throughout the length of the hole. If problems occur please see table "PROBLEM SOLVER" page 1310-1311 or contact Karnasch.
- At the end of the drilling cycle do not remove the holder from the hole whilst at full rpm. Stop the spindle or reduce to low rpm. (10-20)
- **Carbide inserts should not be used in 12×D, 15×D holders without previous advice from Karnasch.**

Insert-installation on holders

- The insert should be installed in the slot of the holder. The insert has a location groove (A) which fits perfectly into the location-pin of the holder and is fixed with an included TORX screw.
- Use only the provided TORX Screws which should be tightened to the values listed on page 309
- When required place corrosion protection paste onto the TORX Screws for example NEVER SEEZ
- The holder slot should be clean and free from dirt or debris.

Calculation of speed (n) in revolutions per minute [rpm.] and feed rate (vf) in mm/min see page 1306
 Attention: If using extra long holder on 8xD, 10xD, 12xD, 15xD
 Note here please the cutting-data-multiplier with calculation example on page 1306

d: Schneidkreis – Durchmesser (diameter)
n: Drehzahl (rpm)

$n = \text{Drehzahl (rpm)}$ $V_c * 318,31 / d \text{ (1/min)}$
 $V_f = \text{Vorschubgeschwindigkeit (feed rate)}$ $f_z * n \text{ (mm/min)}$

Die Schnittdaten gelten für Standard Halter. Wenn Sie die Schnittdaten für längere Halter verwenden, nutzen Sie bitte die folgende Umrechnungstabelle:

The cutting parameter is connected with the length of holder. For longer holder, when choosing the cutting data, you should times the ratio in the following table:

| Parameter | Werkzeuflänge / Holder length | | | | | | |
|-------------------------------|---------------------------------|-----|-----|-----|------|------|------|
| | 3xD | 4xD | 5xD | 8xD | 10xD | 12xD | 15xD |
| Geschwindigkeit [Speed] V_c | siehe Tabelle / see above chart | | | 0,9 | 0,85 | 0,80 | 0,75 |
| Vorschub [Feed] f_z | siehe Tabelle / see above chart | | | | 0,95 | 0,90 | 0,90 |

Beispiel: 12xD Halter $f_z: 0,15 \times 0,90 \text{ (lt. Multiplikator)} = 0,14 \text{ mm/U}$
Material: Automatenstahl (370 N/mm²) $V_c: 79 \times 0,80 \text{ (lt. Multiplikator)} = 63,2 \text{ m/min}$
d: 9,5 mm

Example: 12xD holder $f_z: 0,15 \times 0,90 \text{ (acc. multiplier)} = 0,14 \text{ mm/U}$
Material: free masch. steel (370 N/mm²) $V_c: 79 \times 0,80 \text{ (acc. multiplier)} = 63,2 \text{ m/min}$
d: 9,5 mm

Multiplikator für Kühlmitteldruck und -menge / Coolant Multiplier

| Werkzeuglänge / Holder length | | | | | | |
|---------------------------------|-----|-----|-----|------|------|------|
| 3xD | 4xD | 5xD | 8xD | 10xD | 12xD | 15xD |
| siehe Tabelle / see above chart | | | 1,3 | 1,5 | 2 | 3 |

Kühlmitteldring
max. 30 bar
Cooling nozzle
max. 30 bar

Kühlmittelempfehlung

Beispiel: Bohrung Ø 25 mm mit Pulverstahleinsatz, Stahllegierung mit einer Festigkeit von 450-1265 N/mm²

5xD Halter: 4,8 bar; 22,7 l/min
12xD Halter: 4,8 bar × 2 = 9,6 bar; 22,7 l/min × 2 = 45,4 l/min
15xD Halter: 4,8 bar × 3 = 14,4 bar; 22,7 l/min × 3 = 68,1 l/min

Collant recommendation

Example: to drill 25 mm diameter hole with powder steel insert in alloy steel with a hardness value 125-375 BHN

5xD holder: 4,8 bar; 22,7 l/min
12xD holder: 4,8 bar × 2 = 9,6 bar; 22,7 l/min × 2 = 45,4 l/min
15xD holder: 4,8 bar × 3 = 14,4 bar; 22,7 l/min × 3 = 68,1 l/min

| URsache UND LÖSUNG | PROBLEM | | | | | | | | | |
|---|--------------------------------------|--|----------------|-------------|----------------|--------------|----------------|--------------------------------|--|--|
| | Frühzeitiger Schneidkantenverschleiß | Riefen oder vergrößerter Durchmesser am Bohrungseintritt | Schneidenbruch | Blaue Späne | Aufbauschneide | Vibrationen | Spänestau | Ausbrüche an der Schneidspitze | Beschädigtes oder gebrochenes Werkzeug | |
| Einsatz von Standard- oder extrem langen Haltern | | 1,2,3,4,27 | | | | 1,2,3,4,27 | | 1,2,3,4,27 | | |
| Bohrungseintritt auf einer Schräge | | | | | | 1,3,4,5 | | 1,3,4,5 | 1,3,4,5 | |
| Ausgeschlagene oder nicht ausgerichtete Spindel | 2,6,7 | 2,6,7,27 | | | | 2,6,7 | | 2,6,7 | 2,6,7 | |
| Spindel mit geringer Steifigkeit | | 2,4,8,27 | 2,4,8,9 | | | 2,4,8 | | 2,4,8,9 | 2,4,8,9 | |
| Instabiler Werkstückaufbau | | 10,26,27 | 8,9,10,26 | | | 8,10,26 | | | 8,9,10 | |
| Externe Kühlmittelzufuhr – geringer Druck / Volumen | 11,12,13,19 | | | 11,12,13 | 11,12,13 | | 11,12,13,14 | | 9,11,12,13,14 | |
| Schnittunterbrechungen | | | 2,4,9,15,16,17 | | | 2,4,15,16,17 | | 2,9,15,16,17 | 2,4,15,16,17 | |
| Bohren von gehärteten Werkstoffen | 12,18,19,20 | | | 12,18,19,20 | 12,13,18,19,20 | | | | 12,18,19,20 | |
| Schlechte Gefügeeigenschaften | | | 9,20,21,22,23 | | 9,20,21,23 | | | | 9,20,21,23 | |
| Schlechter Spanbruch | | | | | | | 12,14,19,24,25 | | 12,19,24,25 | |
| Vorgebohrte Bohrungen | 2,23 | | 2,23 | | | 2,23 | | | | |
| Verschleißfester Schneidstoff | | | 9,26 | | | | | | 9,26 | |

LÖSUNG:

1. Verwenden Sie einen kurzen Halter, um eine Pilotbohrung min. 1x Durchmesser tief zu erstellen.
2. Zentrieren Sie die Bohrung mit einem kurzen Werkzeug an. Hierbei muss der Spitzenwinkel gleich oder größer als der verwendete Schneideinsatz sein.
3. Verringern Sie den Vorschub um min. 50% bis das Werkzeug mit dem vollen Durchmesser schneidet.
4. Beim Bearbeiten durch Bohrbuchsen kommen spezielle Halter mit Führungsleisten oder Chrom-Bohrbuchsen-Halter zum Einsatz.
5. Zentrieren Sie die Bohrung an, um einen geraden Bohrungseintritt zu gewährleisten.
6. Spindel oder Werkzeugaufnahme neu ausrichten.
7. Spindel instandsetzen.
8. Die Bohrgeschwindigkeit binnen den physialischen Grenzen der Maschine entsprechend reduzieren. Bitte beachten Sie, dass der Vorschub die Anforderungen für Spanbildung oder für Schnittgeschwindigkeit nicht unterschreitet.
9. Verwenden Sie einen zäheren Schneidstoff mit einer verschleißfesten Beschichtung. Z.B. aus Hartmetall wird Pulverstahl.
10. Werkstück zusätzlich unterstützen, bzw. zusätzlich spannen.
11. Innenkühlung bei Bohrtiefen größer 1x Durchmesser einsetzen.
12. Steigern Sie Kühlmitteldruck und Kühlmittelvolumen.
13. Die Bohrgeschwindigkeit binnen den physialischen Grenzen der Kühlmittelzufuhr entsprechend reduzieren. Bitte beachten Sie, dass der Vorschub die Anforderungen für Spanbildung oder für Schnittgeschwindigkeit nicht unterschreitet.
14. Verwenden Sie einen Spänezyklus um die Späne zu entfernen. Hierzu muss das Werkzeug nicht aus dem Werkstück entfernt werden.

PROBLEM

| Übermäßige Schneidkantenverrundung | Hoher Freiflächenverschleiß | Probleme am Bohrungseintritt | Bohrungsposition nicht korrekt | Bohrung unrund | Einkerbungen an der Schneide | Bohrung zu groß | Schlechte Bohroberfläche | Schlechte Standzeit | Schwankende Leistungsaufnahme | Rückzugsriefen | Eingebrannte Stufen am Schneideinsatz |
|------------------------------------|-----------------------------|------------------------------|--------------------------------|----------------|------------------------------|-----------------|--------------------------|---------------------|-------------------------------|----------------|---------------------------------------|
| | | 1,2,3,4,27 | 1,2,3,4,27 | | | | | | | 1,2,3,4,27 | |
| 1,3,4,5 | | 1,3,4,5 | | 1,3,4,5 | | | | | | 1,3,4,5 | |
| 2,6,7 | | 2,6,7,27 | | | | 2,6,7,27 | 2,6,7 | | | 2,6,7 | |
| | | 2,4,8 | 2,4,8 | | | | | | | 2,4,8 | |
| 8,9,10 | | | | 8,10,26,27 | | | 8,1 | | | 8,9,10,27 | |
| | 11,12,13,19,20 | | | | | 11,12,13,14 | 11,12,13,14 | 11,12,13,14,19,20 | 11,12,13,14 | | 11,12,13,18,20 |
| 2,15,16,17 | | 2,4,15,16,17,27 | 2,4,15,16,17,27 | 2,4,15,16,17 | | 2,15,16,17 | 2,15,16,17 | 2,15,16,17 | | | |
| | 12,18,19,20 | | | | | | | 12,18,19,20 | | | 12,18,19,20 |
| | 9,20,21,23 | 9,20,21,23 | | | 9,20,21,23 | | | 9,20,21,23 | | | |
| 12,19,24,25 | | 12,19,24,25 | | | | 12,19,24,25,27 | 12,19,24,25 | 12,14,19,24,25 | 12,19,24,25 | | |
| 12,19,24,25 | | 2,23,27 | | | 2,23 | | | 2,23 | | | |

15. Um Schnittunterbrechungen am Bohrungsein- bzw. austritt zu vermeiden, sollte die zu bearbeitende Fläche anzentriert oder plangefräst werden.
16. Beim Ein- bzw. Austritt in eine Schnittunterbrechung muss der Vorschub um min. 50% reduziert werden. Bei Vibrationen sollten Nyloc-Schrauben verwendet werden.
17. Verwenden Sie einen kurzen Halter.
18. Falls sich am Schneideinsatz eine Stufe eingebrannt hat, muss die Schnittgeschwindigkeit reduziert werden. Berechnen Sie die Schnittgeschwindigkeit anhand des eingebrannten Durchmessers. Reduzieren Sie diesen Wert um 10% und übertragen ihn nun auf den Bohrungsdurchmesser.
19. Verbessern Sie die Kühlschmierstoffqualität (min. 7-8% Kühlschmierstoffgehalt).
20. Wählen Sie einen verschleißfesteren Schneidstoff. Aus Pulverstahl 15 wird Pulverstahl 25. Aus Pulverstahl 25 wird Hartmetall. Verwenden Sie eine noch verschleißfestere Beschichtung (Fragen Sie uns an)
21. Falls alle Schneidwerkzeuge eine unbefriedigende Standzeit erzielen, sollten die Werkstücke normalisiert werden.
22. Bei harten Einschlüssen im Werkstück verwenden Sie einen zäheren Schneidstoff mit einer verschleißfesten Beschichtung. Aus Hartmetall wird Pulverstahl 25. Aus Pulverstahl 25 wird Pulverstahl 15. Für eine noch verschleißfestere Beschichtung fragen Sie uns an.
23. Reduzieren Sie den Vorschub, achten Sie hierbei aber auf einen ausreichenden Spanbruch.
24. Steigern Sie den Vorschub auf die empfohlenen Werte.
25. Kontaktieren Sie Karnasch. Ggf. muss auf eine Sondergeometrie zurückgegriffen werden.
26. Verbessern Sie die Stabilität.
27. Beschreiben Sie uns genau das Problem. Eventuell muss auf eine Spezialgeometrie zurückgegriffen werden.

| Spot drilled holes | 2,23 | | 2,23 | | | 2,23 | | | | |
| High wear resistant tool grades | | | 9,26 | | | | | | 9,26 | |

SOLUTION:

1. Use a short holder to drill a pilot hole 1xD deep.
2. Spot hole with stub tool of same or greater included angle as the insert.
3. Decrease feed minimum 50% until full diameter established.
4. Use special holder with wear pads or chrome bearing area to work with drill bushing.
5. Spot face to provide flat entry surface.
6. Align spindle or turret or tailstock.
7. Repair spindle.
8. Reduce penetration rate to fall within physical limits of machine set up, but do not fall below feed threshold required to form a chip or speed threshold to cut material.
9. Use tougher grade tool steel with higher wear resistant coating (i.e. if using powder steel 15 use Powder steel 25. If using powder steel 25 use carbide.) Special coatings available on request.
10. Provide additional support for the workpiece.
11. Run coolant through holder when drilling greater than 1xD.
12. Increase coolant volume and pressure through the holder.
13. Reduce penetration rate to fall within coolant limitations, but do not fall below feed threshold required to form a chip or speed threshold to cut material
14. Add peck cycle to clear chips, do not remove insert from hole during peck.

PROBLEM

| Excessive margin wear | High flank wear | Hole lead off | Hole out of position | Hole out of round | Notching of insert | Oversize hole | Poor hole finish | Poor tool life | Power Fluctuation of load metre | Retraction spiral | Step burnt on insert |

15. Pre-mill or spot face entry or exit to remove interruption.
16. Decrease feed up to 50% through entry or exit interruption using Nyloc screws to retain insert.
17. Use short holders in low impact entry cuts.
18. Reduce speed if a step or burn diameter is worn on insert. Calculate the speed at worn diameter, reduce the velocity by 10% and apply to original tool diameter.
19. Improve quality and condition of coolant (water soluble preferred at 7-8% dilution with EP additive.)
20. Use more heat and wear resistant tool grade. If using powder steel 15 use powder steel 25. if using powder steel 25 use carbide. If micro structure problems presents, use more wear resistant coatings (ask us for special coatings)
21. Anneal or normalise parts if all cutting tools exhibiting poor tool life.
22. For hard spots, use tougher grade tool steel with high wear resistant coating (i.e. if using carbide use Powder steel 25. If using Powder steel 25 use powder steel 15. Use a special coating (available on request)
23. Reduce feed, but not below threshold of good chip formation.
24. Increase feed to recommended levels.
25. Contact Karnasch for special geometry on request.
26. Increase rigidity of set up.
27. Explain your problem for making a special geometry insert.

Einsatzhinweise:

- Nur drehend einsetzen. Keine Hammerfunktion verwenden
- Schläge / Stöße auf den Hartmetall-Schneiden vermeiden. Diese führen zu kleinen Absplitterungen welche die Standzeit stark vermindern.
- Lochsäge im Bohrloch nicht verkanten
- Bohrkern nach jeder Bohrung entfernen. Bohrmehl / Späne ebenfalls entfernen.

Notes on use:

- Use rotation only. Switch off impact or hammer drill.
- Avoid shock / impacts on the carbide tips. This leads to small carbide splinters which results to severe loss in performance
- Do not tilt the hole saw in the hole
- Remove the drill core after each operation. Do the same with chips and sawdust.

Einsatzhinweise:

- Nur drehend einsetzen. Keine Hammerfunktion verwenden
- Schläge / Stöße auf den Hartmetall-Schneiden vermeiden. Diese führen zu kleinen Absplitterungen welche die Standzeit stark vermindern.
- Lochsäge im Bohrloch nicht verkanten
- Bohrkern nach jeder Bohrung entfernen. Bohrmehl / Späne ebenfalls entfernen.
- Die 68 mm Lochsägen mit Randversenkung dürfen nicht im Auslauf angehalten werden.
- Feinfühligen Vorschub geben um ein Ausreißen der Schnittkanten zu vermeiden.

Notes on use:

- Use rotation only. Switch off impact or hammer drill.
- Avoid shock / impacts on the carbide tips. This leads to small carbide splinters which results to severe loss in performance
- Do not tilt the hole saw in the hole
- Remove the drill core after each operation. Do the same with chips and sawdust.
- The 68 mm hole saws with rim countersink may not be stopped before it is removed
- Advance with care to prevent the cut edges tearing.

- 1 Beim Bohren von Metallen Schneidöl verwenden. (siehe ab Seite 1143). Sind die Zahnschneiden blau angelaufen, so wurde ohne Schneidöl oder mit zu hoher Schnittgeschwindigkeit gearbeitet.

Berechnung der Schnittgeschwindigkeit (Vc)

n = Drehzahl (U./min.) (siehe Seite 1314)
d = Werkzeugdurchmesser in mm
Vc = Schnittgeschwindigkeit (m/min.)

$$Vc = \frac{\pi \times d \times n}{1000}$$

- 2 Lochsäge im Bohrloch nicht verkanten
- 3 Werden große Lochsägendurchmesser mit Handbohrmahmaschinen eingesetzt, muss die Handbohrmaschine besonders gut fest gehalten werden. Nach Möglichkeit sollten Bohrstände benutzt werden. Wir empfehlen ab Durchmesser 100 mm unseren Aufnahmehalter (schwere Ausführung) Artikel 20 1528 (Seite 593).
- 4 Beim Schneiden von Holz, Spanplatten, Holzersatzwerkstoffen die Säge öfter lüften und das Sägemehl entfernen. Geschieht das nicht, verbrennen die Zahnschneiden und die Lochsäge klemmt im Schnittkanal.
- 5 Beim Schneiden von besonders starken / dicken Holz, Spanplatten, Holzersatzwerkstoffen empfehlen wir unsere Lochsagen: Artikel 20 1121 Seite 582-585.
- 6 **Vergroßerung existierender Löcher**
Bereits vorhandene Löcher ab 32 mm 1/4" können mit einem einfachen Trick erweitert werden. Nehmen Sie eine kleinere Lochsäge (ab 32 mm möglich) und schrauben Sie diese innerhalb der Lochsäge auf das hervorstehende Gewinde. (Siehe Bild). Passende Halter sind Artikel 20 1528, oder 20 1511. Die innere Lochsäge dient als Führungslochsäge, um existierende Löcher zu erweitern. Ggf. ist der Zentrierbohrer zu entfernen.

- 1 Use a good cutting oil when drilling metal. [see from page 1143]. If the tooth tips are blue, the saw has been used without cutting oil or at too high cutting speed.

Calculation of the cutting speed (Vc)

n = Speed (rev./min.) [see page 1314]
d = Hole saw diameter in mm
Vc = Cutting speed (m/min.)

$$Vc = \frac{\pi \times d \times n}{1000}$$

- 2 Do not tilt the hole saw in the hole
- 3 If large hole diameters are used in hand-held drills, the hand-held drill must be held particularly firmly. A drill stand should be used where possible. We recommend for hole saw diameter 100 mm and more our heavy duty arbour 20 1528 (page 593).
- 4 Lift the saw clear frequently when cutting timber, chipboard, and wood substitutes and remove the sawdust and chips. If this is not done, the tooth tips can burn and the hole saw will jam in the cut.
- 5 If cutting especially thick timber, chipboard and wooden substitutes we recommend our hole saws article 20 1121 page 582-585.
- 6 **Enlarging existing holes**
Existing holes (starting with diameter 32 mm) or more in diameter may be enlarged with a simply trick. Take a small hole saw (smallest 32 mm) and screw this inside the hole saw on the projecting thread (see picture). Suitable holder are article 20 1528 and 20 1511. The inner hole saw then acts as a kind of guiding hole saw for extending existing holes. If necessary, remove the center drill.

21 1500

DIAMOND GRIT

600-601

| Ø von-bis from-until | | Drehzahl minimum (U/min.) Number of revolution minimum (Rev./min.) | Drehzahl maximum (U/min.) Number of revolution maximum (Rev./min.) |
|-------------------------|------------------|---|---|
| mm | Zoll/Inch | | |
| 14-25 | 9/16" - 1" | 500 | 1000 |
| 27-51 | 1.1/16" - 2" | 250 | 500 |
| 52-83 | 2.1/16" - 3.1/4" | 150 | 300 |
| 86-152 | 3.3/8" - 6" | 100 | 200 |

Einsatzhinweise:

- Nur drehend einsetzen. Keine Hammerfunktion verwenden
- Lochsäge im Bohrloch nicht verkanten
- Bohrkern nach jeder Bohrung entfernen. Bohrmehl/Späne ebenfalls entfernen
- Um übermäßige Hitzeentwicklung zu vermeiden, sollte mit Wasser gekühlt werden

Notes on use:

- Use rotation only. Switch off impact or hammer drill.
- Do not tilt the hole saw in the hole
- Remove the drill core after each operation. Do the same with chips and sawdust
- Use water as a coolant to prevent heat build up on the cutting surface

Karnasch Stufenbohrer

Karnasch Stufenbohrer sind entwickelt um einwandfreie kreisrunde und gleichzeitig entgratete Löcher in Blechen von 4 mm Dicke zu bohren. Der Übergang bildet einen Radius, der gleichzeitig zum Anfasen oder Entgraten der Bohrung dient. Während man mit Blechschälbohrern leicht kegelige Löcher bohrt, erreicht man mit unseren Karnasch Stufenbohrer eine zylindrische Bohrung. Die Bohrer sind axial-radial gefertigt und können an der Zahnbrust leicht nachgeschliffen werden.

In regelbaren Handbohrmaschinen können kleinere Stufenbohrer (bis ca. Stufe 30 mm) problemlos eingesetzt werden. Für größere Modelle empfehlen wir den Einsatz von stationären Maschinen.

Karnasch Blechschälbohrer

Durch den schälenden Schnitt werden die Löcher beidseitig gratfrei. Schälbohrer sind zum Bohren dünner Materialien, vergrößern bestehender Bohrungen und bohren schräger sowie ineinandergelagerter Löcher geeignet. Sie sind für jede Handbohrmaschine geeignet zum Bohren von PVC, Polystrol, Polyester, Plexiglas, Stahl, Hartpapier, Sperrholz und ähnlichen Werkstoffen. Bei schonender Behandlung mehrfach nachschleifbar. Verwenden Sie für alle Metalle Kühlschmiermittel (siehe ab Seite 1143).

Karnasch Step Drills

Karnasch step drills were developed to drill perfectly round and simultaneously deburred holes in iron sheets of 4 mm thickness. The radius transition simultaneously bevels or deburrs the boreholes. While conical drills bore slightly conical holes, our Karnasch step drills bore cylindrical holes. The drills are axial-radially relieved and can be resharpened at the tooth face.

While using a hand drill machine we recommend small step drills (up to diameter 30 mm).

For bigger models we recommend the application of stationary drilling machines.

Karnasch Conical Drills

The holes are deburred on both sides by the preturning cut. Karnasch conical drills are developed to boreholes in thin materials, enlarge existing holes, drill angular holes and make holes penetrating each other. They are suitable for every hand drill machine to drill PVC, polystrol, polyester, plexiglas, steel, card, ply wood and similar materials. These conical drills can be resharpened many times, if treated carefully.

Use for all metals cooling lubricants (see from page 1143).

- Um eine optimale Leistung zu erreichen, kann es erforderlich sein, dass die angegebenen Drehzahlwerte geringfügig geregelt werden müssen.
- Härtere Materialien erfordern geringere Drehzahlen.
- Kleiner Fräser erfordern höhere Drehzahlen.
- Extralange (Länge >150 mm) erfordern geringere Drehzahlen.
- Beim Arbeiten die Bewegung konstant halten und leichten Druck aufbringen.
- Arbeiten unter der optimalen Drehzahl begünstigt das Aussplittern.
- Arbeiten über der optimalen Drehzahl führt zum verstärkten Zahnverschleiß.
- Wenn man das Werkzeug zu heiß werden lässt, kann die Hartlötverbindung schmelzen und der Kopf löst sich vom Schaft.
- Durch die Benutzung verschlissener Werkzeuge und Klemmhülsen wird das Aussplittern begünstigt.
- Den Fräser nicht mehr als ein Drittel seines Umfangs in das Material senken.

- It may be necessary to adjust the speeds shown to achieve optimum performance.
- Harder materials require slower speeds.
- Smaler burrs require faster speeds.
- Extra long burrs (>150 mm long) require slower speeds.
- Apply constant movement and light pressure when in use.
- Running below the optimum speed will encourage chipping.
- Running above the optimum speed will cause tooth wear.
- Allowing the tool to become too hot may cause the braze to melt and detach the head from the shank.
- Using tools and collets that have become worn will encourage chipping.
- Do not sink the burr for more than one third of its periphery.

SICHERHEITSEMPFEHLUNGEN SAFETY RECOMMENDATIONS

Gehörschutz tragen
Wear ear protection

Schutzhandschuhe tragen

CERMET-BESTÜCKTE KREISSÄGEBLÄTTER (10 7000)

Ein spezieller Verbundwerkstoff der aus Materialien wie Keramikpulver, Siliziumnitriden, Siliziumcarbiden, Siliziumoxyden und hitzebeständigen Metalloxyden wie Titanium, Chrom, Wolfram, Aluminium, Nickel und Cobalt besteht.

Karnasch hat sich vor Jahren entschlossen in enger Zusammenarbeit mit einem japanischen Hersteller diese High-End Kreissägeblätter zu entwickeln. Japan ist bekannt für seine hervorragenden Schneidwerkzeuge und zählt bis heute zu einem der fortschrittlichsten Länder auf diesem Gebiet. Das Resultat dieser Zusammenarbeit sind extrem widerstandsfähige Kreissägeblätter welche durch Ihre enorme Härte, Schlagfestigkeit höchste Standzeiten garantieren und auch unter schwierigsten Bedingungen und hoher Hitze hervorragende Schnittergebnisse liefern.

Diese Kreissägeblätter werden mit niedrigen Schnittgeschwindigkeiten ($V_c = 100-120$ m/min) auf Maschinen wie TSUNE, NISHIJIMA, NORITAKE, AMADA, KASTO, BEHRINGER-EISELE, KALTENBACH, MEGA, FONG HO, EVERSING und SOCO KENTAI, etc. zum Sägen von Profilen und Vollmaterial (Rechteck, Sechskant und Rund) aus Stahl eingesetzt.

Vorteile:

- Enorme Härte für höchste Standzeiten
- Hohe Hitzebeständig
- Korrosionsbeständig
- Schlagfest
- Extreme Kerbschlagzähigkeit
- Hervorragende Schnittgüte
- Optimierte Spanführung durch spezielle Zahngeometrie mit Spanteilerrillen
- High-Tech aus Japan

Application guidelines

CERMET TIPPED CIRCULAR SAW BLADES (10 7000)

A special composite material consisting of materials such as ceramic powders, silicon nitrides, silicon carbides, silicon oxides and heat-resistant metal oxides such as titanium, chromium, tungsten, aluminum, nickel and cobalt.

Karnasch decided years ago to develop these high-end circular saw blades in close cooperation with a Japanese manufacturer. Japan is known for its outstanding cutting tools and is still one of the most advanced countries in the field today. The result of this cooperation are extremely resistant circular saw blades which guarantee maximum tool life due to their enormous hardness, impact strength and excellent cutting results even under the most difficult conditions and high heat.

These circular saw blades are used at low cutting speeds ($V_c = 100-120$ m/min) on machines such as TSUNE, NISHIJIMA, NORITAKE, AMADA, KASTO, BEHRINGER-EISELE, KALTENBACH, MEGA, FONG HO, EVERSING and SOCO KENTAI, etc. for cutting profiles and solid material (rectangle, hexagon and round) made of steel.

Advantages:

- Enormous hardness for maximum tool life
- High heat resistant
- Corrosion resistant
- Impact toughness
- Extreme impact toughness
- Excellent cutting quality
- Optimized chip guidance through special tooth geometry with chip breaker
- High-tech from Japan

Einsatzhinweise

HARTMETALL-BESTÜCKTE KREISSÄGEBLÄTTER TIALN-BESCHICHTET (10 7001)

Diese Kreissägeblätter werden mit hohen Schnittgeschwindigkeiten ($V_c > 200$ m/min) auf Maschinen wie FECEP, TAKEDA, TSUNE, NISHIJIMAX, AMADA, KASTO, BEHRINGER, KALTENBACH, MEGA, FONG HO, EVERSING und SOCO KENTAI, etc. zum Sägen von Profilen und Vollmaterial (Rechteck, Sechskant und Rund) aus Stahl eingesetzt. Zum Sägen von Stahl in H-Form empfehlen wir Maschinen wie FICEP oder TAKEDA.

HARTMETALL-BESTÜCKTE KREISSÄGEBLÄTTER TIALN-BESCHICHTET (10 7002)

Diese Kreissägeblätter werden auf Maschinen wie FECEP, TAKEDA, TSUNE, NISHIJIMAX, AMADA, KASTO, BEHRINGER, KALTENBACH, MEGA, FONG HO, EVERSING und SOCO KENTAI, etc. zum Sägen von Profilen und Vollmaterial (Rechteck, Sechskant und Rund) aus Edelstahl eingesetzt.

Zum Sägen von Edelstahl in H-Form empfehlen wir Maschinen wie FICEP oder TAKEDA.

Die optimale Schnittgeschwindigkeit und der Vorschub für das Sägen von Edelstahl sind abhängig von der Maschine. Für TSUNE, NISHIJIMAX, NORITAKE, AMADA, KASTO, BEHRINGER, KALTENBACH, MEGA, FONG HO, EVERSING und SOCO KENTAI empfehlen wir $V_c = 65$ m/min, $f_z = 0,03$ mm/Zahn.

Für RATTUNDE, BEWO, SINICO, RAS, ADIGE, OMP empfehlen wir $V_c = 80-140$ m/min, $f_z = 0,03-0,08$ mm/Zahn.

Vorteile:

- Hervorragende Schnittgüte
- Hohe Hitzebeständigkeit durch TiAlN-Beschichtung
- Spezielles Hartmetall abgestimmt auf das zu sägende Material
- Spezielle Beschichtung abgestimmt auf das zu sägende Material
- Optimierte Spanführung durch spezielle Zahngeometrie mit Spanleitstufe und Spanbrecher

Kühlung:

Wir empfehlen ein Öl-Nebel-System.

Sägen von Stahl: Nichtwassermischbares pflanzliches Öl verwenden wie unser MECUT MMKS MQL Art. 60 1154 / 60 1153 siehe Seite 1144.

Sägen von Edelstahl: Nichtwassermischbares Mineralöl auf Schwefelbasis mit hoher Viskosität verwenden wie unser MECUT MMKS MQL Art. 60 1163 / 60 1162 siehe Seite 1144.

Sägen von Nichteisenmetallen: Nichtwassermischbares pflanzliches Öl mit niedriger Viskosität verwenden wie unser MECUT MMKS MQL Art. 60 1154 / 60 1153 siehe Seite 1144.

Application guidelines

CARBIDE TIPPED CIRCULAR SAW BLADES TIALN COATED (10 7001)

These circular saw blades are used with high cutting speeds ($V_c > 200$ m/min) on machines such as FECEP, TAKEDA, TSUNE, NISHIJIMAX, AMADA, KASTO, BEHRINGER, KALTENBACH, MEGA, FONG HO, EVERSING and SOCO KENTAI, etc. for cutting profiles and solid material (rectangle, hexagon and round) made of steel. For cutting steel in H-shape we recommend machines such as FICEP or TAKEDA.

CARBIDE TIPPED CIRCULAR SAW BLADES TIALN COATED (10 7002)

These circular saw blades are used on machines such as FECEP, TAKEDA, TSUNE, NISHIJIMAX, AMADA, KASTO, BEHRINGER, KALTENBACH, MEGA, FONG HO, EVERSING and SOCO KENTAI, etc. for cutting profiles and solid material (rectangle, hexagon and round) made of stainless steel.

For cutting stainless steel in H-shape, we recommend machines such as FICEP or TAKEDA.

The optimal cutting speed and the feed rate for sawing stainless steel depend on the machine. For TSUNE, NISHIJIMAX, NORITAKE, AMADA, KASTO, BEHRINGER, KALTENBACH, MEGA, FONG HO, EVERSING and SOCO KENTAI we recommend $V_c = 65$ m/min, $f_z = 0.03$ mm/tooth.

For RATTUNDE, BEWO, SINICO, RAS, ADIGE, OMP we recommend $V_c = 80-140$ m/min, $f_z = 0.03-0.08$ mm/tooth.

Advantages:

- Excellent cutting quality
- High heat resistant by TiAlN coating
- Special carbide matched to the material to be cut
- Optimized chip guidance through special tooth geometry with chip breaker

Cooling:

We recommend an oil mist system.

Cutting steel: Use non-water-soluble vegetable oil like our MECUT MMKS MQL Art. 60 1154 / 60 1153 see page 1144.

Sawing stainless steel: Use high viscosity, non-water-soluble mineral oil based on sulfur such as our MECUT MMKS MQL Art. 60 1163 / 60 1162 see page 1144.

Sawing of non-ferrous metals: Use non-water-soluble vegetable oil with low viscosity like our MECUT MMKS MQL Art. 60 1154 / 60 1153 see page 1144.

ALLGEMEINE GESCHÄFTSBEDINGUNGEN VON KARNASCH PROFESSIONAL TOOLS GMBH GEGENÜBER UNTERNEHMERN (B2B) – KAUFVERTRAG

§ 1 Geltungsbereich

(1) Die vorliegenden Geschäftsbedingungen der Karnasch Professional Tools GmbH, Siemensstraße 1, 68542 Heddeshem gelten für alle Bestellungen von Unternehmern in unserem Onlineshop oder aus unseren Katalogen, soweit diese nicht durch schriftliche Vereinbarungen (insbesondere bei Abrufverträgen) zwischen den Parteien abgeändert werden. Abweichende oder entgegenstehende Bedingungen werden von uns nicht anerkannt, sofern wir diesen nicht ausdrücklich zugestimmt haben.
 (2) Änderungen dieser Geschäftsbedingungen werden Ihnen schriftlich, per Telefax oder per E-Mail mitgeteilt. Widersprechen Sie dieser Änderung nicht innerhalb von vier Wochen nach Zugang der Mitteilung, gelten die Änderungen als durch Sie anerkannt. Auf das Widerspruchsrecht und die Rechtsfolgen des Schweigens werden Sie im Falle der Änderung der Geschäftsbedingungen noch gesondert hingewiesen.

§ 2 Registrierung als Nutzer bei Bestellungen im Onlineshop

(1) Ihre Registrierung als Gewerbetreibende in unserem Handelssystem erfolgt kostenlos. Ein Anspruch auf Zulassung zu unserem Handelssystem besteht nicht. Teilnahmeberechtigt sind ausschließlich unbeschränkt geschäftsfähige Unternehmer im Sinne des § 14 BGB. Auf unser Verlangen haben Sie uns eine Kopie Ihres Personalausweises oder eine Bestätigung Ihrer Eigenschaft als Unternehmer zuzusenden. Zur Zulassung füllen Sie elektronisch das auf unserer Website vorhandene Anmeldeformular aus und mailen uns dieses zu. Die für die Anmeldung erforderlichen Daten sind von Ihnen vollständig und wahrheitsgemäß anzugeben. Mit der Anmeldung wählen Sie einen persönlichen Nutzernamen (E-Mail-Adresse) und ein Passwort. Der Nutzername darf weder gegen Rechte Dritter noch gegen sonstige Namens- und Markenrechte oder die guten Sitten verstoßen. Sie sind verpflichtet, das Passwort geheim zu halten und dieses Dritten keinesfalls mitzuteilen.
 (2) Abgesehen von der Erklärung Ihres Einverständnisses mit der Geltung dieser Allgemeinen Geschäftsbedingungen ist Ihre Registrierung mit keinerlei Verpflichtungen verbunden. Sie können Ihren Eintrag jederzeit wieder unter „Mein Benutzerkonto“ löschen. Allein mit der Eintragung bei uns besteht keinerlei Kaufverpflichtung hinsichtlich der von uns angebotenen Waren.
 (3) Soweit sich Ihre persönlichen Angaben ändern, sind Sie selbst für deren Aktualisierung verantwortlich. Alle Änderungen können online nach Anmeldung unter „Mein Benutzerkonto“ vorgenommen werden.

§ 3 Datenschutz

(1) Sämtliche von Ihnen mitgeteilten personenbezogenen Daten (z. B. Anrede, Name, Anschrift, Geburtsdatum, E-Mail-Adresse, Telefonnummer, Telefaxnummer, Bankverbindung, Kreditkartennummer) werden von uns ausschließlich gemäß den Bestimmungen des deutschen Datenschutzes erhoben, verarbeitet und gespeichert.
 (2) Soweit über die gesetzlichen Erlaubnistatbestände hinaus eine Erhebung, Verarbeitung oder Speicherung personenbezogener Daten beabsichtigt ist, erfolgt diese nur bei Vorliegen einer gesonderten Einwilligung von Ihnen.
 (3) Weiterführende Hinweise zum Datenschutz werden dem Kunden im Rahmen der Datenschutzerklärung im Onlineshop zur Verfügung gestellt.

§ 4 Vertragsschluss

(1) Die Präsentation unserer Waren im Onlineshop oder in unseren Katalogen stellt kein bindendes Angebot unsererseits dar. Erst die Bestellung einer Ware durch Sie ist ein bindendes Angebot nach § 145 BGB. Im Falle der Annahme dieses Angebots versenden wir an Sie innerhalb von 5 Werktagen eine Auftragsbestätigung.
 (2) Eine Garantie übernehmen wir nur nach Maßgabe einer gesonderten und ausdrücklich als solchen bezeichneten Garantieerklärung.

§ 5 Lieferung auf Abruf / Rahmenverträge

(1) Bei der Vereinbarung einer Lieferung auf Abruf wird ein Rahmenvertrag sowie jeweils Einzelverträge pro Abruf geschlossen. Die Rahmenverträge haben grundsätzlich eine Laufzeit von maximal 12 Monaten.
 (2) Nach einer entsprechenden Anfrage durch Sie senden wir Ihnen ein Angebot in Form eines Rahmenvertrages zu. Rahmenverträge wie auch Einzelverträge gelten erst mit einer Auftragsbestätigung von uns als angenommen und wirksam.

§ 6 Preise

(1) Alle Preisangaben erfolgen in Euro. Die Preise verstehen sich als Nettopreise zuzüglich der jeweils gültigen gesetzlichen Mehrwertsteuer.
 (2) Die Preise gelten ab Werk ohne Verpackung und Transportkosten.
 (3) Für die Anfertigung von Sonderwerkzeugen ist eine Anzahlung in Höhe von 50 % zu leisten. Dies gilt auch bei Abschluss eines Abrufvertrages.
 (4) Alle von uns aufgeführten Preise gelten für die im Onlineshop oder im Katalog bezeichnete bzw. dargestellte Ausführung und Abmessung. Soweit Sie bei Ihrer Bestellung hiervon abweichen, führt dies auch ohne ausdrückliche vorherige Ankündigung zu einer neuen Preisbemessung durch uns.
 (5) An Sonderangebote sind wir nur bis einschließlich des 14. Tages ab dem Datum der Veröffentlichung gebunden, es sei denn im konkreten Angebot ist etwas Gegenteiliges ausgewiesen.
 (6) Im Falle des Abschlusses einer Lieferung auf Abruf (§ 5) gelten die im Rahmenvertrag vereinbarten Preise. Tritt bei Rahmenverträgen oder Langfristverträgen (unbefristete Verträge oder Verträge von mehr als 12 Monaten Laufzeit) eine wesentliche Änderung der Lohn-, Material- oder Energiekosten ein, so ist jeder Vertragspartner berechtigt, eine angemessene Anpassung des Preises unter Berücksichtigung der neuen Gegebenheiten zu verlangen.

§ 7 Zahlungsbedingungen und Aufrechnung

(1) Die Zahlung der Ware erfolgt auf Rechnung per Nachname oder gegen Vorkasse.
 (2) Die Bezahlung der Lieferung hat innerhalb von 30 Tagen ab Rechnungsdatum in bar ohne jeden Abzug zu erfolgen. Dies gilt nicht, wenn zwischen den Parteien eine Sonderabrede besteht, die wir in der Auftragsbestätigung schriftlich bestätigt haben.
 (3) Reparatur- und Schärfaufträge sind entgegen Abs. 2 nach Erhalt der Rechnung sofort ohne jeden Abzug zahlbar.
 (4) Sofern Sie ihren Sitz außerhalb der EU Mitgliedsstaaten haben gilt folgendes: Sämtliche Bankgebühren, die im Rahmen der Zahlung anfallen, sind von Ihnen zu tragen. Sofern diese Gebühren uns belastet werden, sind wir berechtigt, Ihnen diese in Rechnung zu stellen.
 (5) Bei Zahlungsverzug sind wir berechtigt, Zinsen gemäß § 288 Abs. 2 BGB geltend zu machen.
 (6) Ist eine Teilzahlungsabrede getroffen und kommen Sie mit mehr als zwei Teilzahlungen in Verzug, so wird der Restbetrag gesamtfällig. Das gleiche gilt auch für den Fall, dass uns Umstände bekannt werden, die die Sicherheit der Forderung als gefährdet erscheinen lassen.
 (7) Rechnungen können sowohl postalisch als auch in elektronischer Form an den Kunden übermittelt werden.
 (8) Aufrechnungsrechte stehen Ihnen nur zu, wenn Ihre Gegenansprüche rechtskräftig festgestellt, unbestritten oder von uns anerkannt sind. Bei Mängeln der Lieferung bleiben die Gegenrechte des Käufers unberührt.

§ 8 Lieferbedingungen

(1) Wir liefern die Ware gemäß den mit Ihnen getroffenen Vereinbarungen. Liefertermine und Lieferfristen sind nur verbindlich, wenn sie von uns schriftlich bestätigt wurden.
 (2) Soweit wir die Lieferung der Ware nicht oder nicht vertragsgemäß erbringen, müssen Sie uns zur Bewirkung der Leistung eine Nachfrist setzen. Ansonsten sind Sie nicht berechtigt, vom Vertrag zurückzutreten.
 (3) Innerhalb Deutschlands liefern wir bei einem Auftragswert von über € 1.000,- netto inklusive Porto und Verpackung (Sonderanfertigungen, Expresslieferungen ausgeschlossen).
 (4) Bei Auslandslieferungen gelten die Preise exklusive Verpackung und Porto, unverzollt und unversichert. Weitere Kosten gehen ebenfalls zu Ihren Lasten, sofern nicht ausdrücklich eine andere Regelung getroffen wurde.
 (5) Anfallende Versandkosten werden von uns gesondert auf der Rechnung ausgewiesen.
 (6) Der Mindestauftragswert beträgt € 50,- netto.
 (7) Bei bruch- bzw. kälteempfindlichen Werkzeugen sowie Sonderanfertigungen behalten wir uns vor, von der bestellten Menge eine Über- oder Unterlieferung bis zu 10 % auch ohne gesonderte Vereinbarung vorzunehmen. Berechnet wird die Liefermenge.
 (8) Beim Eintritt und während der Dauer höherer Gewalt werden die vertraglichen Rechte und Pflichten suspendiert. Die betroffene Partei informiert die andere Partei unverzüglich über Eintritt, Ursache der Verzögerung und später über deren Beendigung. Falls die höhere Gewalt ununterbrochen über einen Zeitraum von mindestens 6 Monaten andauert, treffen beide Parteien eine Vereinbarung über die weitere Abwicklung des Vertrages. Falls eine Einigung nicht zustande kommt, entscheidet das vorgesehene Schiedsgericht.

§ 9 Gefährübergang, Abnahme

(1) Die Gefahr geht auf den Besteller über, wenn der Liefergegenstand das Werk bzw. den Versendungsort verlassen hat, und zwar auch dann, wenn Teillieferungen erfolgen oder der Lieferer noch andere Leistungen, z. B. die Aufstellung des Liefergegenstandes übernommen hat. Soweit eine Abnahme zu erfolgen hat, ist diese für den Gefahrübergang maßgebend. Sie muss unverzüglich zum Abnahmetermin, hilfsweise nach der Meldung des Lieferers über die Abnahmebereitschaft durchgeführt werden. Sie

dürfen die Abnahme bei Vorliegen eines nicht wesentlichen Mangels nicht verweigern.
 (2) Verzögert sich oder unterbleibt der Versand bzw. die Abnahme infolge von Umständen, die uns nicht zuzurechnen sind, geht die Gefahr vom Tage der Meldung der Versand- bzw. Abnahmebereitschaft auf Sie über.
 (3) Teillieferungen sind zulässig, soweit dies für Sie zumutbar ist.

§ 10 Eigentumsvorbehalt

(1) Die Ware bleibt bis zur vollständigen Bezahlung unser Eigentum. Geraten Sie mit der Zahlung länger als 10 Tage in Verzug, haben wir das Recht, vom Vertrag zurückzutreten und die Ware zurückzufordern.
 (2) Sie sind zur Weiterveräußerung der unter Eigentumsvorbehalt stehenden Ware im gewöhnlichen Geschäftsverkehr berechtigt. In diesem Falle treten Sie jedoch in Höhe des Rechnungswertes unserer Forderung bereits jetzt alle Forderungen aus einer solchen Weiterveräußerung, gleich ob diese vor oder nach einer evtl. Verarbeitung der unter Eigentumsvorbehalt gelieferten Ware erfolgt, an uns ab. Unbeschadet unserer Befugnis, die Forderung selbst einzuziehen, bleiben Sie auch nach der Abtretung zum Einzug der Forderung ermächtigt. In diesem Zusammenhang verpflichten wir uns, die Forderung nicht einzuziehen, so lange und so weit Sie Ihren Zahlungsverpflichtungen nachkommen, kein Antrag auf Eröffnung eines Insolvenz- oder ähnlichen Verfahrens gestellt ist und keine Zahlungseinstellung vorliegt. Insoweit die oben genannten Sicherheiten die zu sichernden Forderungen um mehr als 10 % übersteigen, sind wir verpflichtet, die Sicherheiten nach unserer Auswahl auf Ihr Verlangen freizugeben.

§ 11 Sachmängel

(1) Alle diejenigen Teile sind nach unserer Wahl nachzubessern oder mangelfrei zu ersetzen, die sich infolge eines vor dem Gefahrübergang liegenden Umstandes als mangelhaft herausstellen. Die Feststellung solcher Mängel ist uns unverzüglich schriftlich anzuzeigen. Ersetzte Teile werden unser Eigentum.
 (2) Die Verjährungsfrist von Gewährleistungsansprüchen für die gelieferte Ware beträgt – außer im Fall von Schadensersatzansprüchen – zwölf Monate ab Erhalt der Ware.
 (3) Die Nacherfüllung beinhaltet weder den Ausbau der mangelhaften Sache noch den erneuten Einbau, wenn wir ursprünglich nicht zum Einbau verpflichtet waren.
 (4) In allen Fällen unberührt bleiben die gesetzlichen Sondervorschriften bei Endlieferung der Ware an einen Verbraucher (Lieferantenregress gem. §§ 478, 479 BGB).
 (5) Zur Vornahme aller uns notwendig erscheinenden Nachbesserungen und Ersatzlieferungen haben Sie uns nach Absprache die erforderliche Zeit und Gelegenheit zu geben; andernfalls sind wir von der Haftung für die daraus entstehenden Folgen befreit. Nur in dringenden Fällen der Gefährdung der Betriebssicherheit bzw. zur Abwehr unverhältnismäßig großer Schäden – in diesen Fällen sind wir sofort zu verständigen – haben Sie das Recht, den Mangel selbst oder durch Dritte beseitigen zu lassen und von uns Ersatz der erforderlichen Aufwendungen zu verlangen.
 (6) Sie haben im Rahmen der gesetzlichen Vorschriften ein Recht zum Rücktritt vom Vertrag, wenn wir – unter Berücksichtigung der gesetzlichen Ausnahmefälle – eine gesetzte angemessene Frist für die Nachbesserung oder Ersatzlieferung wegen eines Sachmangels fruchtlos verstreichen lassen. Liegt nur ein unerheblicher Mangel vor, steht Ihnen lediglich ein Recht zur Minderung des Vertragspreises zu. Das Recht auf Minderung des Vertragspreises bleibt ansonsten ausgeschlossen.
 (7) Keine Gewährleistung wird insbesondere übernommen bei ungeeigneter oder unsachgemäßer Verwendung, fehlerhafter Montage bzw. Inbetriebsetzung durch Sie oder Dritte, natürlicher Abnutzung, fehlerhafter oder nachlässiger Behandlung, nicht ordnungsgemäßer Wartung, Nutzung ungeeigneter Betriebsmittel, chemischer, elektrochemischer oder elektrischer Einflüsse – sofern solche nicht von uns verantworten sind.
 (8) Bessern Sie oder ein Dritter unsachgemäß nach, haften wir nicht für die daraus resultierenden Folgen. Gleiches gilt für Änderungen des Liefergegenstandes ohne unsere vorherige Zustimmung.
 (9) Die Rücksendung der Ware ist Ihnen nur nach vorheriger schriftlicher Vereinbarung mit uns gestattet. Ohne eine solche schriftliche Vereinbarung sind die Kosten der Rücksendung von Ihnen zu tragen. Wir sind berechtigt, unfrei zugesandte Rücksendungen nicht anzunehmen.
 (10) Sonderanfertigungen werden grundsätzlich nicht zurückgenommen.
 (11) Sofern wir Ihnen eine Warengutschrift gewähren, ergibt sich die Höhe der Gutschrift aus dem Betrag der Originalrechnung abzüglich 15 % Bearbeitungsgebühr. Die Mindestbearbeitungsgebühr beträgt € 15,-.
 (12) Im Falle einer Warengutschriftvereinbarung haben Sie die Ware auf Ihre Kosten an uns zurückzusenden.

§ 12 Rechtsmängel

(1) Führt die Benutzung des Liefergegenstandes zur Verletzung von gewerblichen Schutzrechten oder Urheberrechten im Inland, werden wir versuchen, Ihnen auf unsere Kosten das Recht zum weiteren Gebrauch zu verschaffen oder den Liefergegenstand in für Sie zumutbarer Weise daran zu modifizieren, dass die Schutzrechtsverletzung nicht mehr besteht. Ist dies zu wirtschaftlich angemessenen Bedingungen in angemessener Frist nicht möglich, sind Sie zum Rücktritt vom Vertrag berechtigt. Unter den genannten Voraussetzungen steht auch uns ein Recht zum Rücktritt vom Vertrag zu.
 (2) Die Verjährungsfrist von Gewährleistungsansprüchen für die gelieferte Ware beträgt – außer im Fall von Schadensersatzansprüchen – zwölf Monate ab Erhalt der Ware.
 (3) Voraussetzung für die Geltendmachung Ihrer Ansprüche ist, dass
 • Sie uns unverzüglich von geltend gemachten Schutz- oder Urheberrechtsverletzungen unterrichtet haben,
 • Sie uns in angemessenem Umfang bei der Abwehr der geltend gemachten Ansprüche unterstützt bzw. uns die Durchführung der Modifizierungsmaßnahmen ermöglicht haben,
 • uns alle Abwehrmaßnahmen einschließlich außergerichtlicher Regelungen vorbehalten bleiben,
 • der Rechtsmangel nicht auf der Eigenart Ihrer Anweisung / Bestellung beruht und
 • die Rechtsverletzung nicht dadurch verursacht wurde, dass Sie den Liefergegenstand eigenmächtig geändert oder in einer nicht vertragsgemäßen Weise verwendet haben.

§ 13 Haftungsausschluss

(1) Wir haften für Vorsatz und grobe Fahrlässigkeit. Ferner haften wir für die fahrlässige Verletzung von Pflichten, deren Erfüllung die ordnungsgemäße Durchführung des Vertrages überhaupt erst ermöglicht, deren Verletzung die Erreichung des Vertragszwecks gefährdet und auf deren Einhaltung Sie als Kunde regelmäßig vertrauen. Im letztgenannten Fall haften wir jedoch nur für den vorhersehbaren, vertragstypischen Schaden. Wir haften nicht für die leicht fahrlässige Verletzung anderer als der in den vorstehenden Sätzen genannten Pflichten.
 Die vorstehenden Haftungsausschlüsse gelten nicht bei Verletzung von Leben, Körper und Gesundheit. Die Haftung nach Produkthaftungsgesetz und aus einer etwaigen Garantie bleibt unberührt.

§ 14 Verjährung

(1) Ihre Ansprüche – gleich aus welchem Rechtsgrund – verjähren innerhalb von 12 Monaten ab Ablieferung. Für vorsätzliches oder arglistiges Verhalten, im Falle schuldhafter Verletzung von Leben, Körper und Gesundheit sowie bei Ansprüchen nach dem Produkthaftungsgesetz gelten die gesetzlichen Fristen. Sie gelten auch für Mängel eines Bauwerks oder für Liefergegenstände, die entsprechend ihrer üblichen Verwendungsweise für ein Bauwerk verwendet wurden und dessen Mangelhaftigkeit verursacht haben.
 (2) Soweit im Rahmen unserer Mängelbeseitigung Rechte von Ihnen wegen Sachmängeln neu entstehen, verjähren sämtliche Ansprüche spätestens in 24 Monaten ab Lieferung des ursprünglichen Lieferteils.

§ 15 Schlussbestimmungen

(1) Es gilt das Recht der Bundesrepublik Deutschland unter Ausschluss des UN-Kaufrechts.
 (2) Erfüllungsort ist unser Geschäftssitz.
 (3) Sollten diese AGB den Bestimmungen in Abrufverträgen (Rahmenvertrag und/oder Einzelvertrag) widersprechen, dann gelten im Zweifel die vertraglichen Vereinbarungen.
 (4) Ausschließlicher Gerichtsstand für alle Streitigkeiten aus oder im Zusammenhang mit diesem Vertrag ist der Sitz unseres Unternehmens.

Informationspflichten

(1) Die für den Vertragsabschluss zur Verfügung stehende Sprache ist Deutsch und Englisch.
 (2) Abbildungen im Online-Shop dienen lediglich der Produktpäsentation und stellen kein rechtsverbindliches Angebot von uns dar. Änderungen und Irrtümer bleiben vorbehalten.
 Ein Vertragsschluss zwischen Ihnen und uns über im Online-Shop angebotene Waren setzt voraus, dass Sie das gewünschte Produkt zunächst in den virtuellen Warenkorb legen, den virtuellen Warenkorb anklicken und sodann den Bestellvorgang mit dem Button „zur Kasse gehen“ einleiten. Erst durch Anklicken des im weiteren Verlauf erscheinenden Bestellbuttons „kostenpflichtig bestellen“ bereiten Sie den Abschluss der Bestellung vor und geben ein rechtsverbindliches Angebot zum Abschluss eines Kaufvertrages ab.
 (3) Wir speichern den Vertragstext und senden Ihnen die Bestelldaten und unsere AGB per E-Mail zu.
 (4) Etwaige Eingabefehler bei Abgabe Ihrer Bestellung können Sie bei der abschließenden Bestätigung vor der Kasse erkennen und mit Hilfe der Löschen- und Änderungsfunktion vor Abschendung der Bestellung jederzeit korrigieren. Ihre Bestelldaten sind aus Sicherheitsgründen nicht mehr über das Internet zugänglich.
 (5) Speziellen und vorstehend nicht erwähnten Verhaltenskodizes unterliegen wir nicht.
 (6) Im Übrigen verweisen wir auf unsere Allgemeinen Geschäftsbedingungen.

GENERAL TERMS & CONDITIONS OF BUSINESS OF KARNASCH PROFESSIONAL TOOLS GMBH FOR TRANSACTING WITH ENTREPRENEURS (B2B) – SALES CONTRACT

Section 1 – Scope of validity

(1) These General Terms & Conditions of Business [“GTGB”] of Karnasch Professional Tools GmbH Siemensstrasse 1, D-68542 Heddeshheim apply to all orders which entrepreneurs place in our online shop or from our catalogues, save they have been amended by written agreements (notably delivery-on-call agreements) between the Contract Parties. Divergent or contrary provisions shall not be recognised by us in the absence of our express written consent thereto.
(2) Amendments to these GTGB shall be communicated to you in writing, by fax or e-mail. Your failure to object to said amendments within 4 (four) weeks of receiving notification thereof shall be construed as your tacit acceptance thereof. The right of objection and the legal consequences of silence shall be indicated to you again in the case of an amendment of the GTGB.

Section 2 – Registration as a user for placing orders in the online shop

(1) Your registration as a business customer in our trading system is free of charge. An entitlement to registration in our trading system does not exist. Eligible for registration are exclusively entrepreneurs with unlimited legal capacity within the meaning of Section 14 of the German Civil Code (Bürgerliches Gesetzbuch, BGB). Upon our request, you shall send us a copy of your identity card, an alternative official identification document or a confirmation of your capacity as an entrepreneur. To register, you should complete electronically the application form on our website and send this to us by e-mail. The registration data you provide us must be complete and truthful. To register, you must choose a personal user name (e-mail address) and password. The user name may violate neither third-party, nor any other name or brand, rights, nor moral principles. You shall maintain the confidentiality of the password and under no circumstances disclose it to third parties.
(2) Besides your declaration of consent to the applicability of these General Terms & Conditions of Business, your registration does not engender any other obligations whatsoever. You may delete your entry at any time under “My user account”. Your registration with our website, alone, engenders no undertaking to purchase any merchandise we offer.
(3) Should your personal details change, you, yourself shall be responsible for updating these. All changes can be made online, after signing on, under “My user account”.

Section 3 – Data privacy

(1) All of the personal data you impart to us [e.g. salutation, name, address, date of birth, e-mail address, telephone number, fax number, bank connection, credit card number] are collected, processed and stored by us exclusively in compliance with the provisions of Germany’s data privacy laws.
(2) Any intended collection, processing or storage of personal data extending beyond that permitted by statute shall occur exclusively subject to separate provision of your express consent.
(3) Customers can find further information on data privacy in the Data Privacy Declaration in the online shop.

Section 4 – Conclusion of contract

(1) The presentation of merchandise in the online shop or in our catalogues does not constitute a binding offer on our part. Only your placement of an order for merchandise engenders a binding offer under Section 145 BGB. Upon our acceptance of said offer, we shall send you an order confirmation within 5 (five) workdays.
(2) We will only provide a guarantee subject to a separate guarantee declaration which has been expressly designated as such.

Section 5 – Delivery-on-call and framework agreements

(1) In the case of a delivery-on-call agreement, a framework agreement, as well as individual agreements for each requisition, shall be entered into. All framework agreements have a maximum contractual period of 12 (twelve) months.
(2) Upon your request therefor, we shall send you a non-binding offer in the form of a framework agreement. Framework agreements and individual agreements shall only be deemed accepted by us and effective following an order confirmation.

Section 6 – Prices

(1) All prices are quoted in euros (EUR). The prices are net and subject additionally to the prevailing rate of statutory value added tax (VAT).
(2) Prices are quoted ex works, and do not include the cost of packaging and transportation.
(3) A fifty (50) percent prepayment is payable for the production of special tools. The same applies to the conclusion of delivery-on-call agreements.
(4) All quoted prices apply to the specifications and dimensions described or shown in the online shop or in our catalogue. Any orders that you place with deviating specifications and / or dimensions shall engender a price reassessment without our express prior notification thereof.
(5) Special offers shall only honoured up to and including the 14th day starting from the date of publication, save alternative arrangements are provided for in the offer concerned.
(6) For orders requisitioned on a delivery-on-call basis (Section 5), the prices quoted in the framework agreement shall apply. If, in the event of a framework agreement or long-term contract (contract which has no specific end-date or runs for a period exceeding twelve (12) months), substantial changes occur in wage, material or energy costs, either Contract Party shall be entitled to demand a reasonable adjustment of the prices to accommodate the new circumstances.

Section 7 – Terms of payment, offsetting

(1) Merchandise is paid for on account, by cash on delivery (COD) or against prepayment.
(2) Deliveries shall be paid for within 30 (thirty) days of the invoice date in cash, without any deduction, save when special arrangements between the Contract Parties have been provided for, which we have confirmed in writing in the order confirmation.
(3) Contrary to Clause [2], repair and sharpening orders are payable immediately upon receipt of the invoice, without any deduction.
(4) If your legal entity is located outside EU (European Union), the following rule applies: All bank charges incurred in connection with payment shall be borne by you. We shall be entitled to invoice you for any such fees we sustain.
(5) We shall be entitled to charge interest in accordance with Section 288 [2] BGB for overdue payments.
(6) If an agreement on instalment payments has been concluded, and more than 2 (two) instalments are overdue, the total outstanding amount shall fall due. The same applies, should we gain knowledge of circumstances that would appear to jeopardise the safety of our claim.
(7) Invoices may be sent to the customer by regular mail or electronically.
(8) You will be only entitled to offset rights if your counterclaims have been legally established, are indisputable or have been recognized by us. Defects in delivery shall not impair the counter-rights of the customer.

Section 8 – Terms of delivery

(1) Merchandise shall be delivered in accordance with our mutually reached agreements. Delivery times and deadlines shall only be binding subject to our written confirmation thereof.
(2) In the event of an abortive delivery of goods, or a delivery that is not contractually accordant, you shall set us a follow-up deadline for us to discharge our obligations. By failing to do so, you shall surrender your entitlement to withdraw from contract.
(3) For orders within Germany with a net value of EUR 1,000.00 and above, we shall deliver free of freight charges to the recipient’s railway station.
(4) For orders outside Germany, the cost of postage, packaging, custom duties and insurance shall be additionally charged. Other costs shall also be borne by you, save these have been expressly provided for by separate agreement.
(5) Incurred shipping costs shall be itemised separately on the invoice.
(6) The minimum order value is EUR 50.00 net.
(7) For tools that are sensitive to cold or susceptible to breakage, as well as for custom-made orders, we reserve the right, without special agreement, to over- or under-deliver by up to 10 (ten) percent of the ordered quantity. The delivered quantity shall be invoiced.
(8) Upon occurrence, and for the duration, of force majeure, the contractual rights and undertakings of the Contract Parties shall be suspended. The affected Contract Party shall inform the respective other Contract Party forthwith of the occurrence, cause of delay and, subsequently, the end of the force majeure. If the force majeure continues uninterrupted for a period of at least 6 (six) months, both Contract Parties shall reach an agreement on the future implementation of their contract. If an agreement cannot be reached, the intended court of arbitration shall decide.

Section 9 – Passage of risk, formal acceptance

(1) The risk passes to the order party when the deliverable leaves the factory or place of dispatch, also if partial deliveries are involved or the supplier has undertaken to render additional services such as installation of the deliverable. If formal acceptance is required, this shall be decisive for the passage of risk. Acceptance shall be conducted immediately per the agreed acceptance date or, alternatively, upon notification by the supplier of acceptance-readiness. Acceptance may not be refused by the customer on the grounds of a minor defect.

(2) If shipping or acceptance are delayed or not accomplishable due to reasons beyond our control, risk shall pass to you on the day on which you were notified that the deliverable was ready for shipping or acceptance.

(3) Partial deliveries are admissible if reasonable for you.

Section 10 – Retention of title

(1) We hold ownership of the merchandise until full payment thereof. If you are in arrears with payment for more than 10 (ten) days, we shall be entitled to rescind the contract and to claim back the merchandise we have delivered.
(2) In the normal course of business, you may resell the merchandise that is subject to the retention of title. In such case, however, you, already now, and in the amount of the invoice value of our claim, assign to us all claims from such a resale, irrespective of whether this occurs prior or subsequent to a possible further processing of the delivered merchandise that is subject to the retention of title. Notwithstanding our right to collect the claims directly, you, too, shall also be entitled to collect the assigned claim. In this connection, we undertake to refrain from demanding payment on the assigned claims to the extent that you meet all your payment obligations, do not become subject to an application for insolvency or similar proceedings, or to any stay of payments. Should the aforementioned collaterals exceed the claims to be secured by more than 10 (ten) percent, we undertake, upon your request, to release collaterals elected at our discretion.

Section 11 – Material defects

(1) We shall, at our free discretion, either repair, or replace without defects, all those parts which transpire to be defective for causes preceding the passage of risk. The discovery of such defects shall be notified forthwith in writing. Ownership of replaced parts shall revert to us.
(2) Except in the case of claims for damages, the limitation period for warranty claims for the delivered goods is 12 (twelve) months from the time of receipt of the goods.
(3) Follow-up performance shall encompass neither the removal of the defective item, nor the renewed installation, if we had not been charged with the original installation.
(4) In all cases, the special statutory guidelines on final delivery of merchandise to a consumer (supplier recourse under Sections 478, 479 BGB) remain unaffected.
(5) Subject to prior agreement, you shall give us the time and opportunity needed to implement the improvements and deliver the spare parts that appear necessary; in failure thereof, we shall be released from liability for the ensuing consequences. Only in urgent cases in which operating safety is jeopardised, or disproportionately severe damage is to be avoided, may the defect be rectified by yourself or a third party engaged by yourself, and the ensuing outlays presented to us for reimbursement; in such cases, we are to be notified forthwith.
(6) In the framework of the statutory provisions, you may rescind the contract if – while taking account of the statutory exemptions – we allow to elapse fruitlessly a reasonably-set deadline to subsequently improve or replace a delivery due to a quality defect. If existing, a minor defect shall only entitle you to a reduction in the purchase price. In all other cases, the entitlement to a reduction in the purchase price is excluded.
(7) No warranty is provided by us, particularly in the case of unsuitable or improper use, incorrect assembly or commissioning by you or a third party, natural wear and tear, incorrect or negligent handling, improper maintenance, use of inappropriate operating equipment, chemical, electrochemical or electrical influences – provided that we are not responsible therefor.
(8) If you or a third party perform an improper rectification, we cannot be held liable for the consequences incurred. The same applies to alterations made to the deliverable without our prior consent.
(9) Merchandise may only be returned with our prior, written consent. Without such a written agreement, the cost of returning the merchandise shall be borne by you. We reserve the right to refuse delivery of shipments sent freight collect.
(10) Specially produced merchandise is principally not taken back.
(11) If we decide to issue a refund, it will be calculated as the originally invoiced amount for the item concerned less a 15 (fifteen) percent handling fee. The minimum handling fee is EUR 15.00 (fifteen euros).
(12) If we agree to issue a refund, the cost of returning the merchandise to us shall be borne by you.

Section 12 – Defects of title

(1) If the use of the deliverable causes a breach of commercial property right or domestic copyright in the Federal Republic of Germany, we shall at our own expense attempt to either provide for your right to continue to use the deliverable, or to modify it in such a way that is reasonable to you and ensures that the property right is no longer breached. If this is not feasible on commercially reasonable terms or within a reasonable period of time, you shall be entitled to rescind the contract. In such case, we, too, shall be entitled to rescind the contract.
(2) Except in the case of claims for damages, the limitation period for warranty claims for the delivered goods is 12 (twelve) months from the time of receipt of the goods.
(3) For the assertion of your claims to be recognised, it is necessary that:
• you have notified us immediately of the assertion of commercial property right or copyright infringements;
• you have given us reasonable support in warding off the asserted claims and enabled us to perform the necessary modifications;
• we have retained the right to execute all measures required for warding off the claims, including out-of-court settlement;
• the infringement is not ascribable to peculiarities of your instructions / order; and
• the infringement was not ascribable to your unauthorised modification of the deliverable or by your use of it in a non-contractual fashion.

Section 13 – Liability waiver

(1) We shall be liable for intentional or gross negligence. Furthermore, we shall be liable for the negligent breach of obligations, the performance of which first make the proper performance of the contract possible to begin with, the breach of which jeopardises achieving the contract purpose, and the observance of which you as a customer generally rely upon. In the last stated case, we shall be liable however only for the foreseeable damages typical for this type of contract. We shall not be liable for a slightly negligent breach of duties other than those stated in the sentences above. The foregoing liability exemptions shall not apply to injuries to life, body and health. Liability in accordance with the German Product Liability Act (Produkthaftungsgesetz, ProdHaftG) or arising from a guarantee shall remain unaffected.

Section 14 – Limitation period

(1) All claims, irrespective of their legal grounds, shall lapse after twelve months of delivery. In the case of deliberate or malicious conduct, or in cases of culpably caused injury to life, body or health, or claims under ProdHaftG, the statutory limitations shall apply. They shall also apply to defects in a structure and to deliverable which, in keeping with their customary mode of use, were used in a structure and caused its defectiveness.
(2) If, in the course of our remedial action, new rights arise on your part on account of material defects, all claims shall lapse at the latest 24 (twenty-four) months after delivery of the original deliverable.

Section 15 – Miscellaneous provisions

(1) The law of the Federal Republic of Germany shall apply, i.e. excluding the convention of the United Nations concerning contracts on the international purchase of goods (CISG).
(2) The place of performance is our registered place of business.
(3) Should these GTGB conflict with the provisions of delivery-on-call agreements (framework agreement and / or individual contract), the contractual agreements shall have precedence.
(4) The location of our company’s registered place of business shall be the sole place of jurisdiction for all disputes arising from and in connection with this agreement.

Information obligations

(1) Contracts may be entered into in German and English.
(2) Images in the online shop serve solely to present our products and do not constitute a legally binding offer by us. Changes and errors are reserved.
A conclusion of contract between yourself and ourselves for merchandise offered in the online shop is conditional upon you initially placing the required product in the virtual shopping basket, clicking on the virtual shopping basket, and then initiating the order process by clicking the “Proceed to checkout” button. Only by clicking on the subsequently displayed order button “Buy now” do you prepare the way to complete the order and submit a legally binding offer to enter into a purchase agreement.
(3) We save the contractual text and send you the order data, along with our GTGB, by e-mail.
(4) During the final confirmation before the checkout, you can identify any input errors contained in your order, and correct these at any time using the “Delete” and “Change” functions before submitting the order. For security reasons, your order data are no longer accessible over the Internet.
(5) We are not bound by any special or hitherto unmentioned codes of conduct.
(6) We additionally refer you to our General Terms & Conditions of Business (Allgemeine Geschäftsbedingungen, AGBs).
