BESTELLUNGEN ORDERS

Sie können 24/7 in unserem Onlineshop bestellen. Zusätzlich erreichen Sie uns persönlich von Mo.-Fr. in der Zeit von 08:00-17:00 Uhr MEZ.

Orders can be placed 24/7 online at our onlineshop. You can reach us from Monday to Friday between 08:00-17:00 CET.

LIEFERKONDITIONEN AUSSERHALB DEUTSCHLANDS · DELIVERY CONDITIONS OUTSIDE GERMANY

Bei Auslandslieferungen werden Porto und Verpackung in Abhängigkeit vom Gewicht in Rechnung gestellt, unverzollt, unter 500 € netto unversichert.*

For orders outside Germany we will charge transport and packaging fees depending on weight, without customs duties and under 500 € net without insurance.*

VERSAND INNERHALB DEUTSCHLANDS

Bestellungen in unserem Onlineshop werden ab 150 € netto innerhalb Deutschlands frei Haus geliefert*. Über andere Bestellwege werden Ihre Bestellungen ab 1.000 € frei Haus geliefert.*

Verfügbare Ware, die werktags im Onlineshop bis 14:00 Uhr / über andere Bestellwege bis 13:00 Uhr bestellt wird, erhalten Sie am folgenden Werktag (Mo.-Fr.) bis 12:00 Uhr. Die Versandkostenpauschale hierfür beträgt 6,70 € (Stand 03/2017) pro Paket.*/**

Ein Versand am gleichen Tag nach 13:00 Uhr bzw. 14:00 Uhr ist zu einer Versandkostenpauschale von 12,00 € möglich.*/**

RÜCKSENDUNGEN / REKLAMATIONEN RETURN DELIVERIES / CLAIMS

Am Ende des Kataloges und auf unserer Homepage finden Sie die entsprechenden Formulare. Bitte verwenden Sie ausschließlich unsere Vorlagen. Bei Falschbestellungen berechnen wir 15% des Warenwertes. Sonderanfertigungen sind von der Rückgabe ausgeschlossen.

At the last pages of this catalogue and at our homepage you can find the appropriate forms. Please use only our forms. In case of wrong ordering we charge 15% handling fee. Special products can not be returned.

* Ggf. zzgl. Zuschläge für: Sperrgut, Expresszustellung, zusätzliche Handhabung, Außengebiete, schwer zugängliche Gebiete. Wir behalten uns vor die Kosten für Porto und Versandzuschläge eventl. Preiserhöhungen unserer Versanddienstleister anzupassen.

* Surcharge for bulky good, express delivery, add. handling, outside area, difficult to access areas. We reserve the right to adjust our costs for freight and surcharge to price increases of our shipping service provider.

**Bei Paketen mit einem Bruttogewicht über 32 kg kann es in Einzelfällen zu Verzögerungen von bis zu 24 Stunden kommen.

Angesichts der aktuellen Marktsituation gehen wir davon aus, dass wir im Zeitraum vom 01.08.2019 – 31.07.2020 keine Preiserhöhung auf die Preise in unserem GK32 Hauptkatalog vornehmen werden.

Ausgenommen sind plötzliche und unerwartet hohe Veränderungen unserer Einkaufskonditionen für Rohmaterialien. In diesem Fall behalten wir uns vor, notwendige Preisanpassungen vorzunehmen.

Considering the current market situation, we assume that in the period from 01.08.2019 – 31.07.2020 we will not increase the prices stated in our GK32 main catalogue.

Exceptions are sudden and unexpectedly high changes in our purchasing conditions for raw materials. In this case, we reserve the right to make necessary price adjustment.

• Lagerware / Stock tool

○ Keine Lagerware, Lieferzeit und Preis auf Anfrage
No stock tool. Price and delivery on request

Lieferzeit kurzfristig da Rohlinglager vorhanden
Short delivery deadline possible then blanks are on stock available

Sonderpreis. Solange Vorrat reicht. Rückgabe nicht möglich.
Special price. While stocks last. Return not possible.

2-3 Arbeitstage Lieferzeit / 2-3 work days delivery time

Qualitativ hochwertige Produkte zu einem attraktiven Preis:

Die Karnasch Valuetools bestechen durch ein hervorragendes Preis-Leistungs-Verhältnis. Dies wird ermöglicht durch eine automatisierte Großserienfertigung sowie optimierte Prozesse. Neuentwickelte Materialien und angepasste Fertigungstechniken sind Grundlage unserer neuen Qualitätslinie. Enge Fertigungstoleranzen, Zuverlässigkeit und Standzeit resultieren in unseren sehr effizienten Karnasch Valuetool Produkten.

High quality products with an attractive price:

The Karnasch Valuetools impress with an excellent price-performance ratio. This is made possible by automated serial production. Newly developed materials and adapted manufacturing process as well as optimized processes are the basis of our new quality line. Tight manufacturing tolerances, tool life and reliability result in our very efficient Karnasch Valuetool products.

VHM Schafffräser / Solid carbide end mills

| | | |
|-----------|---|------|
| > 30 8011 | VHM-Microschafffräser mit Eckenradius / Solid carbide miniature end mills with corner radius | Ø 48 |
| > 30 8012 | VHM-Micro-3D Mini-Radiusfräser / Solid carbide miniature ball nose mill | Ø 50 |

KARNASCH – TOP QUALITY NO COMPROMISES

Our products meet the highest demands for precision and longevity. With their excellent properties and use of best materials and coatings, KARNASCH high-performance tools are globally synonymous for quality in professional applications, such as small- and large-batch production.

Benefits of KARNASCH-tools:

- Production on state-of-the-art CNC machines
- Smallest production tolerances
- 100% quality control
- Latest coating technologies
- High-quality tool materials for product safety and longevity

Metallverarbeitende Unternehmen brauchen die absolute Gewissheit, mit hochwertigen, leistungsstarken und prozesssicheren Werkzeugen zu arbeiten. Karnasch Professional Tools bietet das, worauf es ankommt!

Wir sind ein weltweit agierendes Unternehmen mit Hauptsitz im badischen Heddeshheim sowie in Görsdorf (Brandenburg), das

- Hochleistungswerkzeuge zur Metallverarbeitung von herausragender Qualität produziert und vertreibt,
- seit 1961 auf dem Markt tätig ist und dementsprechend über große Erfahrung, umfassendes Know-how sowie überdurchschnittliche Kundenorientierung verfügt,
- durch intelligente Lagerhaltung jederzeit die sofortige Lieferbarkeit seiner Produkte garantiert,
- in vielen Regionen der Welt Vertriebspartner hat, damit auch für Ihre Auslandsniederlassungen eine permanente Versorgung und begleitender Service gewährleistet ist,
- Support groß schreibt und diesen Anspruch u.a. durch eine Service-Hotline auch erfüllt,
- mit der Eröffnung einer Niederlassung in Görsdorf (Brandenburg) bereits im Jahr 1992 auf gesamtdeutsche Präsenz gesetzt hat.

Weltweit zählen Kunden aus folgenden Bereichen auf Karnasch Professional Tools:

- Werkzeug- und Formenbau,
- Luft- und Raumfahrt,
- Automobilindustrie,
- Schiff- und Eisenbahnbau,
- Hoch-, Stahl- und Brückenbau,
- Dental.

Metal working companies require absolute certainty to work with high-quality, high-performance and reliable tools. Karnasch Professional Tools offers all that matters!

We are a family-run business that is actively involved on a worldwide scale, with our head office in Heddeshheim in Baden and Görsdorf (Brandenburg), which

- produces and distributes excellent quality, high performance tools for metal working,
- has been active in the market since 1961 and has accordingly obtained invaluable experience, comprehensive know-how and above average customer orientation,
- guarantees immediate availability of our products at any time thanks to intelligent stock-keeping,
- has sales partners in many regions of the world, and can thus also ensure a continuous and accompanying service for your overseas branches.
- places an emphasis on support and fulfils this claim via, amongst other things, a service hotline.
- cemented our presence throughout Germany with the opening of a branch in Görsdorf (Brandenburg) in 1992.

Our customers predominantly come from the following sectors:

- Tool and mould making,
- Aviation and astronautics,
- The automotive industry,
- Shipbuilding and railway construction,
- Structural engineering, steel construction and bridge building,
- Dental.

Konventionelle Bearbeitung
Conventional processing

VHM Kugelfräser
– Geringe Zustellung
in ap

Solid carbide ball end
mill
– Small stepover in ap

Neue innovative Bearbeitungsstrategie
New innovative machining strategy

High Efficient Finishing Parabelfräser für 5 Achsen
Zerspanung mit 45° Spirale und 4 Schneiden
– bis zu 90-fach bessere Oberflächen
– bis zu 90% kürzere Bearbeitungszeiten
– wirtschaftliche Bearbeitung durch hohe Zustellung
in ap
– Reduzierung kostenintensiver Poliervorgänge

High efficient finishing parabola end mill for 5-axis
machining with 45° spiral and 4 cutting edges
– up to 90 times higher surface quality
– up to 90% shorter machining time
– efficient processing through high stepover in ap
– reduction of cost intensive polishing processes

Wir empfehlen die Fräser mit dem Anstellwinkel $a/2$ einzusetzen.
We recommend to use the end mills with work angle $a/2$.

Hocheffiziente 5-Achs-Bearbeitung von Ebenen und Freiformflächen

Der Einsatz der Karnasch Parabelfräser bedarf eines 5-Achsen Fräszentrum sowie einer leistungsstarken CAM-Lösung, die das Potenzial der Werkzeuggeometrie voll ausschöpft. Das Performance-Paket *hyperMILL®* MAXX Machining bietet innovative 5-Achs-Schlichtstrategien für die Bearbeitung von Ebenen und Freiformflächen. Intelligente Automatismen sorgen für eine optimale Anstellung und Führung des Werkzeugs. So lassen sich exzellente Oberflächen und eine enorme Zeiteinsparung auch in schwer zugänglichen Bereichen erzielen.

Bis zu 90 % Zeiteinsparung beim Schlichten

Durch die großen Radien an der Mantelschneide können Flächen mit sehr großen Zeilenabständen bearbeitet werden. Gegenüber konventionellen Bearbeitungsverfahren beträgt das Einsparungspotential bis zu 90 % und das bei gleichbleibender Oberflächenqualität.

Vergleich der Zeilenabstände herkömmlicher VHM-Kugelfräser zu den neuen Parabelfräsern

hyperMILL®
MAXX Machining

Kleine Bahnabstände führen zu langen Bearbeitungszeiten
Small step-over result in a long machining process.

High efficient 5-axis machining of planes and free-form surfaces

Use of Karnasch High Efficient Parabola end mills demands a 5-axis milling machine together with a powerful CAM solution that fully exploits the potential of the tool geometry. The performance package *hyperMILL®* MAXX Machining offers innovative 5-axis finishing strategies for machining of planes and free-form surfaces. Intelligent automated functions ensure optimal inclination and guidance of the end mill. This allows high surface qualities and a tremendous time savings even in hard-to-reach areas.

Up to 90 % time saving when finishing

The large radii at the curved cutting edge enable flat surfaces with great step-over distance to be cut. The same surface quality compared to conventional machining, saves up to 90 % machining time.

Step-over comparison of conventional solid carbide ball end mills with the new Parabola end mills

Große Bahnabstände ermöglichen eine enorme Zeiteinsparung bei der Bearbeitung

Wide step-over enables enormous time saving during the machining process.

Wenn Hartmetall Hartmetall bearbeitet

Bei schwer zerspanbaren Werkstoffen, wie z.B. Hartmetall, geraten Werkzeuge oftmals an Ihre Grenzen und treiben die Fertigungskosten – aufgrund langer Bearbeitungszeiten – stark in die Höhe.

Durch den Einsatz der neuesten Karnasch-Fräser für die Hartmetallbearbeitung (Zerspanung mit geometrisch bestimmter Schneide) haben wir die Wirtschaftlichkeit enorm gesteigert.

Vorteile:

- Diamantbeschichtete Karnasch-Hartmetallfräser senken die Fertigungskosten und Bearbeitungszeiten
- Die Herstellung von komplexen 3D-Formen und Konturen wird möglich
- Erreichen einer besseren Oberflächengüte
- Hartmetallbearbeitung über 2.000 HV
- Sehr hohe Schneidkantenstabilität bis zu 10.000 HV
- Weiße Erodierzonen werden vermieden

When carbide is machining carbide

During the machining of difficult materials, such as cemented carbide, tools will reach their limits and pushes up the production costs – due to long processing times.

We have enhance the productivity and efficiency by using the latest Karnasch end mills (tools with geometrically defined cutting edges).

Advantages:

- Diamond coated Karnasch carbide end mills reduce manufacturing costs and machining time
- The production of complex 3-D moulds and contours is possible
- You achieve a better surface
- Machining of carbide over 2.000 HV is possible
- Excellent cutting edge stability up to 10.000 HV
- No white erode zones

- Bearbeitungshinweise:**
- Vorausgesetzt, es werden stabile Maschinenverhältnisse und einwandfreie Werkzeugaufnahmen verwendet (Schrumpffutter)
 - Die genannten Richtwerte basieren auf interpolationsfräsen auch in den Ecken. Ohne Interpolationsfräsen reduzieren Sie die Schnittgeschwindigkeit (Vc) um 50-70% sowie die Schnitttiefe (ap) um 50-80%.
 - Kühlen Sie mit MMKS (Minimalkühlschmierung) oder Luft.
 - Beim Eintauchen in Z-Achse mit einer Schräge von ≈ 2° ist der Vorschub auf 40-60% zu reduzieren.
 - Die Richtwerte beziehen sich auf eine Auskraglänge l3 von 3xD. Für tiefere Anwendungen sind Vc / ap / Vf den Gegebenheiten anzupassen.
 - Um optimale Schnittbedingungen zu erreichen sind die Einsatzbedingungen vor Ort zu berücksichtigen.

- Machining details:**
- Conditions must be: rigid machine circumstances and excellent holders. (shrinking holder)
 - The mentioned standard values based on interpolation milling also in corners.
 - Coolant with MMKS [MQL (mist)] or air blow.
 - When dipping in Z-axis, you have to reduce the feed speed 40-60%.
 - The standard values refer to the length l3 of 3xD. For deeper applications please adjust Vc/ap/Vf for the conditions.
 - In order to achieve ideal cutting results you have to consider your local operating conditions.

Index

Qualitätsmerkmale diamantbeschichteter VHM-Fräser – **Konsequent** "Nur das Beste" bei einer **100% Kontrolle**
 Quality characteristics of diamond coated Karnasch solid carbide end mills – **Consistently** "Only the best" with a **100% control**

Höchstmögliche Standzeiten und Präzision werden nur erzielt wenn das verwendete Hartmetall, die Beschichtung sowie die Werkzeuggeometrien bis ins kleinste Detail aufeinander abgestimmt sind.

Diamantbeschichtete Karnasch-Fräser werden mit speziellen Geometrien für die Graphitbearbeitung sowie mit einer optimierten Nano-Kristallinen sowie **dropletfreien** Diamantschicht geliefert. Zudem erfolgt eine **100% Kontrolle** der Fräser

The highest possible service life and precision are only scoring, if the used hard metal, the coating and the tool geometries are designed to the last detail.

Diamond coated Karnasch-end mills are supplied with special geometries for machining graphite, as well as an optimized nano-crystalline and **droplet free** diamond coating. In addition to that, all the tools will be **checked by 100%**

Rundlauftoleranzen von max. 3 µ
 Concentricity tolerance of max. 3 µ

Durchmessertoleranzen von 0/-0,010 mm
 Diameter tolerance of 0/-0,010 mm

Radiuskontur von max. ± 0,002 mm
 Radius contour accuracy of max. ± 0,002 mm

Dadurch lässt sich die Oberflächengüte sowie die Standzeit erheblich steigern.

This allows to increase considerably the surface finish and the tool life.

Karnasch-Hochleistungsfräser werden zur besseren Unterscheidung der jeweiligen Fräser und deren Anwendung in farblich unterschiedlichen Schutzhülsen verpackt und etikettiert. Diamantbeschichtete Fräser werden mit grauen Etiketten und grauen Verpackungen geliefert.

For a better distinguish of our end mills and their application, are the Karnasch high performance end mills, packed and labelled in different coloured protective packaging tubes. Diamond coated end mills are labelled in grey with protective packaging tubes in grey.

Um ein Höchstmaß an Präzision zu gewährleisten, wird jedes µ gesucht. Aus diesem Grund werden Karnasch-Micro-Präzisionswerkzeuge auf dem Schaftboden beschriftet. Dadurch erreichen wir eine bessere Rundlaufgüte. Gleichzeitig erhöht sich die Standzeit bei messbar glatteren Oberflächen.

In order to guarantee the maximum level of precision, every micron will be searched. That's why Karnasch-Micro-Precision end mills are marked on the shank bottom side. Thereby we achieve a better concentricity. At the same time, the lifetime increases with measurable smoother surfaces.

BILD DER DIAMANTSCHICHT

Kompaktes Gefüge der nano-kristallinen Diamantschicht

PICTURE OF THE DIAMOND COATING

Compact structure of nano-crystalline diamond coating.

1 DIAMANTSCHICHT DIAMOND COATING

2 VHM-TRÄGERMATERIAL SOLID CARBIDE – SUBSTRATE

GLEICHMÄSSIGE BESCHICHTUNG AUCH AN DER SCHNEIDKANTE

CONSTAND COATING ALSO ON THE CUTTING EDGE

KONTURGETREUE DIAMANTBESCHICHTUNG AUCH BEI FRÄSERDURCHMESSER 0,2 MM

ACCURATE CONTOUR DIAMOND COATING EVEN WITH END MILL DIAMETER 0,2 MM.

Diamantbeschichteter VHM-Entgrater, lang, 90°
Diamond coated solid carbide deburr, long, 90°

Strahlverschleißtest stirnseitig auf der Diamantbeschichtung
Blast wear test on the diamond coated face

100-fache Vergrößerung
100-times magnification

Resultat: Bei gleicher Strahlzeit entsteht ein enormer Verschleißschutz durch die Verwendung der Karnasch-Diamantbeschichtung

Result: You will achieve a tremendous wear resistant by the same blasting time, with our Karnasch-diamond coating

Diamantbeschichteter Micro Schaftfräser mit Eckenradius für die **Hartmetallbearbeitung**
 Diamond coated solid carbide end mills with corner radius for machining in **cemented carbide**

PKD EXTREME

PKD (Kristalliner Diamant) ist der derzeit dominierende Schneidstoff in industriellen Anwendungen, nicht zuletzt wegen seiner leichteren Verarbeitbarkeit gegenüber dem reinen Diamant. PKD-EXTREME ist ein neues, gesintertes Diamantpulver in einer metallischen Bindungsmatrix. Die Bearbeitung ist nur durch Lasern möglich.

PCD EXTREME

PCD (Polycrystalline Diamond) is currently the dominant tool material in industrial applications, not least because of its easy workability compared to pure diamond. PCD-EXTREME is a new sintered diamondpowder in a metallic bond matrix. Machining is possible only by laser.

PKD EXTREME

PKD (Kristalliner Diamant) ist der derzeit dominierende Schneidstoff in industriellen Anwendungen, nicht zuletzt wegen seiner leichteren Verarbeitbarkeit gegenüber dem reinen Diamant. PKD-EXTREME ist ein neues, gesintertes Diamantpulver in einer metallischen Bindungsmatrix. Die Bearbeitung ist nur durch Lasern möglich.

PCD EXTREME

PCD (Polycrystalline Diamond) is currently the dominant tool material in industrial applications, not least because of its easy workability compared to pure diamond. PCD-EXTREME is a new sintered diamondpowder in a metallic bond matrix. Machining is possible only by laser.

PROFESSIONAL TOOLS

KARNASCH COMPOSITES-TOOLS
CARBONBEARBEITUNG IN
DER AUTOMOBILINDUSTRIE

Karnasch Composites-Tools for machining
carbon in the automotive industry

PCD - CVD - MCD - ND

30 6557

Diamantbeschichteter VHM High Efficient Finishing Parabelfräser
Diamond coated solid carbide high efficient finishing parabola end mill

GRAPHIT
graphite

GFK-CFK
GFRP-CFRP

Weltneuheit für die Graphitbearbeitung
World first for graphite processing

Konventionelle Bearbeitung
Conventional processing

VHM Kugelfräser
- Geringe Zustellung in ap
Solid carbide ball end mill
- Small stepover in ap

Neue innovative Bearbeitungsstrategie
New innovative machining strategy

High Efficient Finishing Parabelfräser für 5 Achsen
Zerspanung mit 45° Spirale und 4 Schneiden
- bis zu 90-fach bessere Oberflächen
- bis zu 90% kürzere Bearbeitungszeiten
- wirtschaftliche Bearbeitung durch hohe Zustellung in ap
- Reduzierung kostenintensiver Poliervorgänge

High efficient finishing parabola end mill for 5-axis
machining with 45° spiral and 4 cutting edges
- up to 90 times higher surface quality
- up to 90% shorter machining time
- efficient processing through high stepover in ap
- reduction of cost intensive polishing processes

Wir empfehlen die Fräser mit dem Anstellwinkel $a/2$ einzusetzen.
We recommend to use the end mills with work angle $a/2$.

30 7425 Für Inox / For Inox

**MAXIMALE STABILITÄT
DURCH 3-FASEN-SCHLIFF**
Maximum stability through
triple-bevel grinding

**SEHR GLATTE OBERFLÄCHE
DURCH NEU ENTWICKELTE
BESCHICHTUNG Tcx³**
Extremely smooth surface
through our new developed
Tcx³-coating

**UNGLEICHTEILUNG
FÜR HOHE LAUFRIEHE**
Unequal pitch for a smooth
cutting

TECHNISCHE INFORMATION zu VHM-Kreissägeblätter
TECHNICAL INFORMATION on slitting saws solid carbide

5 6000A

5 6001B

Kühlung:

Wir empfehlen beim Einsatz von Vollhartmetallwerkzeugen eine besonders kräftige Kühlung. Unzureichend oder unregelmäßig arbeitende Kühlung begünstigt das Entstehen von Rissen im Werkzeug oder kann zum Bruch führen. Im Zweifelsfalle mit fetter Emulsion oder mit Schneidöl arbeiten.

Keine Regel ohne Ausnahme: Grauguss wird normalerweise trocken zerspannt, ebenfalls wird Kunststoff trocken gesägt. Gelegentlich wird Pressluft oder Wasser verwendet. Bei Magnesiumlegierungen ist Vorsicht geboten. In Verbindung mit Wasser besteht Explosionsgefahr. Aus diesem Grund wird hier trocken gesägt.

Vorschub:

Der allgemeine Richtwert für den Vorschub je Zahn liegt zwischen 0,005 mm für sehr harte Werkstoffe und 0,05 mm für weiche NE-Metalle. Bei durchschnittlich hartem Material wird man mit ca. 0,01 mm pro Zahn beginnen – also wesentlich langsamer als bei HSS – und je nach Ergebnis den Vorschub etwas reduzieren oder erhöhen. Die Wahl des Vorschubes wird von vielen nicht berechenbaren Faktoren beeinflusst. Die Zerspanbarkeit des Werkstoffes spielt ebenso eine Rolle, wie Drehzahl, Vorschubart, Werkstückspannung und Maschinenzustand. Die Anzahl der Zähne im Eingriff, Sägendurchmesser und Breite sind weitere Einflussfaktoren. Aus diesen Gründen können wir Ihnen nur allgemeine Richtwerte angeben. Je nach Einsatzbedingungen können diese Werte sowohl höher als auch niedriger liegen. Speziell bei Karnasch Vollhartmetallwerkzeugen bringt ein kleiner Vorschub und eine feine Zahnteilung eine besonders feine Schnittfläche. Bei den verschiedenen Werkstoffen kann man von den in der Tabelle aufgeführten Vorschubwerten pro Zahn ausgehen. Multipliziert mit der Zähnezahl des verwendeten Sägeblatts und der Drehzahl ergibt sich dann der auf der Maschine einzustellende Vorschub in mm/min.

Für NE-Metalle kann, sofern auf der Maschine vorhanden, auch Sprühöl-Schmierung verwendet werden: oder Art.: 60 1150 (Mecut spray).

Cooling:

We recommend using highly effective cooling when cutting with solid carbide tools. If the cooling is not sufficient or is irregular in nature, this can cause fractures in the tools or even result in complete failure. When in doubt, use water-oil emulsions or cutting oil.

Exception: Grey cast iron is usually machined while dry and plastics are also cut dry. Occasionally, compressed air or water may be used. Exercise caution with magnesium alloys. Magnesium may explode if it comes into contact with water. Therefore, always cut magnesium alloys while they are dry.

Feed rates:

As a guideline, use a feed rate per saw tooth of 0.005 mm for very hard materials and 0.05 mm for softer non-ferrous metals. For a metal of typical hardness, start with approx. 0.01 mm per tooth – i.e., much slower than with high speed steel. Depending on the results you achieve, you can reduce or increase the feed rate slightly. Your choice of feed rate is affected by many unpredictable factors. The machinability of the material plays a role as does the speed, feed type, workpiece clamping and the state of your machines and tools. Additional factors include the number of saw teeth that are engaged at any given moment, the saw diameter and saw width. Therefore it is only possible to provide approximate values. Depending on the machining conditions, you may have to increase or decrease this value. When using Karnasch solid carbide tools in particular, lower feed rates and finer tooth pitches will result in improved cutting surfaces. Depending on the material being processed, start with the feed rate given in the table below. Multiplying the number of teeth with the speed gives the feed rate to be set on your machine in mm/min.

For non-ferrous metals, you can also use spray oil lubrication if this is available on the machine being used: or type: 60 1150 (Mecut spray).

| Werkstoffe Material | Kühl/Schmierstoffe Coolant/lubricant | Schnittgeschwindigkeit Cutting speed | Richtwerte/Vorschub Sz (mm / Zahn) Suggested feed rate Sz (mm / tooth) |
|--|--|---|---|
| Stähle bis 600 N/mm ² (Automatenstahl) Steels with up to 600 N/mm ² (free-cutting steel) | Emulsion / Mischverhältnis 1:20 Emulsion / Mixture ratio 1:20 | 150 m/min. | 0,010 – 0,030 mm |
| Stähle von 600 bis 1000 N/mm ² (Baustahl) Steels from 600 to 1000 N/mm ² (structural steel) | Emulsion / Mischverhältnis 1:15 Emulsion / Mixture ratio 1:15 | 120 m/min. | 0,005 – 0,020 mm |
| Nichtrostende Stähle Stainless steel | Emulsion / Mischverhältnis 1:10 Emulsion / Mixture ratio 1:10 | 80 m/min. | 0,005 – 0,015 mm |
| Hochlegierte Stähle High-alloyed steel | Emulsion / Mischverhältnis 1:10 Emulsion / Mixture ratio 1:10 | 70 m/min. | 0,005 – 0,010 mm |
| Titan Titanium | Schneidöl Cutting oil | 60 m/min. | 0,003 – 0,005 mm |
| Grauguss über 220 HB Grey cast iron harder than 220 HB | Trocken Dry | 100 m/min. | 0,005 – 0,010 mm |
| Kupferlegierungen Copper alloys | Emulsion Emulsion | 300 m/min. | 0,020 – 0,040 mm |
| Messinglegierungen Brass alloys | Sprühölkühlung / Emulsion Spray oil cooling / Emulsion | 500 m/min. | 0,010 – 0,040 mm |
| Aluminium Aluminum | Sprühölkühlung / Emulsion Spray oil cooling / Emulsion | 1000 – 2000 m/min. | 0,010 – 0,040 mm |

Vorschub pro Zahn: Sz (mm / Zahn)
Feed per tooth: Sz (mm / tooth)

Vorschub: S (mm / min)
Feed rate: S (mm / min)

$$S_z = \frac{S}{Z \cdot n}$$

$$S = S_z \cdot Z \cdot n$$

S = Vorschub (mm / min.)
S = feed (mm / min.)

S_z = Vorschub pro Zahn (mm / Zahn)
S_z = feed per tooth (mm / tooth)

Z = Zähnezahl
Z = number of teeth

Z = Zähnezahl
Z = number of teeth

n = Drehzahl (1 / min.)
n = speed (rpm)

n = Drehzahl (1 / min.)
n = speed (rpm)

**Karnasch Gewindewirbler –
Technische Details**

Karnasch VHM-Gewindewirbler werden logarithmisch hinterschliffen, was zu einer beachtlichen Standzeiterhöhung führt. Durch den logarithmischen Hinterschliff bleiben der Spanwinkel und der Hinterschliff stabil, was zu einer erhöhten Prozesssicherheit führt.

Durch die spezielle Profilform bleibt das zu bearbeitende Gewinde maßgenau und verzugsfrei.

Die Hauptvorteile sind:

- Einsetzbar für die Hartmetallbearbeitung bis 80 HRC
- Spezielle Beschichtungen für die Bearbeitung verschiedener Materialien
- Keine Gratbildung
- Logarithmischer Hinterschliff
- Standardabmessungen ab unserem Lager lieferbar

**Karnasch solid carbide whirling thread cutters –
Technical details**

Karnasch solid carbide thread mills are arc shaped logarithmically grinded this results in a significant higher tool life. Due to the logarithmic grinding the rake angle and relief remain stable, which leads to increased process reliability.

Due to our special profile shape we ensure, that the thread is free from distortions and stay dimensionally true.

The major advantages are:

- Suitable for cemented carbide up to 80 HRC
- Special coatings for machining different materials
- No burr formation
- Special logarithmic grinding
- Standard dimensions available from stock

Logarithmisch hinterschliffen
Logarithmical relief ground

VHM-Gewindefräser mit Innenkühlung, Logarithmisch hinterschliften
Solid carbide thread mill with interior cooling supply, logarithmical relief ground

- Paste haftet am Werkzeug.
- Kein Tropfen und Umherspritzen.

Ideal zum Arbeiten in Zwangslagen wie z.B. „Überkopfeinsatz“ und bei Maschinen ohne Kühlmittleinrichtung.

Verwendung: Erhöht signifikant die Standzeiten und Oberflächengüte beim: Sägen, Fräsen, Gewindeschneiden, Reiben, Bohren, Drehen.

Zum Zerspanen aller Stähle sowie schwierigster Materialien wie Titan-, Mangan-, Stahlguss-, Chrom-Nickel oder Molybdän-Stählen.

Hervorragend auch für alle Nichteisenmetalle wie Alu, Kupfer, Messing.

- The paste sticks to the tool.
- No dripping or splashing

Ideal for working under difficult circumstances e.g. "Overhead use" and for machines without cooling device.

Application: Increases tool life and surface finish significantly when: sawing, milling, tapping, grinding, drilling.

For machining all kind of steels. Also excellent for extremely difficult materials such as titanium-, manganese-, cast steel-, chrome-nickel or molybdenum steels.

Also excellent for all non-ferrous metals such as aluminum, copper, brass.

% Sonderpreis / Sale Artikel. Lieferbar solange Vorrat.
Special price / sale article. While stocks last.

Bearbeitungshinweise: Die Arbeitstemperatur darf 60° Celsius nicht überschreiten um ein Erweichen der Harzbindung zu vermeiden. Ideal ist Pressluftkühlung mit Absaugung.

Processing instruction: The work temperature must not exceed 60° Celsius in order to avoid the resin melting.

Diamantbeschichtete VHM-Hochleistungsbohrer mit Innenkühlung für CFK/GFK – unidirektional – mit 90° Spitzwinkel vermeidet Delamination

29 0122

Diamond-coated solid-carbide drill with interior cooling for CFRP/GFRP – unidirectional – with 90° tip angle, prevents delamination

| | |
|---------------------|----------------------------|
| GRAPHIT graphite | PVDF GF25 |
| COMPO- SITES | ZIRKON OXID ZIRCONIA |
| CFK CFRP | FR 4 |
| GFK GFRP | |
| PEEK CF30 | |
| PEEK GF30 | |
| GF GF25 | |

Durch 2 Führungsphasen ist eine sehr hohe Präzision der Bohrungen möglich, bei gleichzeitiger Vermeidung von Delamination.

With 2 guide chamfer is a very high precision of the holes possible, by avoiding of delamination.

Empfohlene Schnittdaten / Recommended cutting data

| Werkstoffgruppe Material group | WERKSTOFF WORKPIECE MATERIAL | vc m/min | f mm/U | | | |

UNIDIREKTIONAL
Faserverlauf in eine Richtung
Fibre progress in one direction

A Delamination und Gratbildung mit konventionellen Bohrern.
B Sauberer Bohrungsaustritt durch optimierte Führungsphase des Bohrwerkzeuges.

GFK, CFK

Für Kunststoffe, GFK, CFK, MMC

Routers for fiberglass, GFK, CFK

Schnittdaten
Cutting data

Film
Movie

Diese Frässtifte sind geeignet zum Umrissfräsen, Besäumen, Nuten und Bohren der großen Bandbreite von Faserverstärkten Kunststoffen (Fiberglas, GFK, CFK). Weiterhin für MMC (Metal Matrix Composites = schwer zerspanbare abrasive Verbundstoffe wie z.B. Leiterplatten, Verbindungen wie Keramik mit Glasfaser, Graphit, Carbon.

Für CFK/GFK empfehlen wir unsere DCA-06 Diamantbeschichtung.

These routers are for contouring, grooving, drilling of a wide range of GFK, CFK, fiberglass reinforced plastics, as well as MMC (Metal Matrix Composites). MMC material such as printed circuit boards, composites such as ceramic with glass fiber, graphite, carbon etc.

We recommend for CFRP/GFRP our DCA-06 diamond coating.

PROFESSIONAL TOOLS

CHEMICAL VAPOUR DEPOSITION (CVD)

REVOLUTIONIERT DIE BEARBEITUNG IN DER
LUFT-, RAUMFAHRT- & AUTOMOBILINDUSTRIE

Revolutionize the machining in aerospace
and automobile industry

- BIS 1,0 MM DIAMANTSTÄRKE
- EXTREM SCHARFE SCHNEIDEN DURCH LASERVERFAHREN
- HOCHGENAUE SCHNEIDKANTENTOLERANZ VON MAX. 1µ
- STANDZEITENERHÖHUNG BIS ZU 300%

- UP TO 1,0 MM DIAMOND THICKNESS
- EXTREME SHARP CUTTING EDGE BY THE USE OF LASER PROCESS
- HIGH-PRECISION CUTTING EDGE TOLERANCE OF MAX. 1µ
- INCREASE OF TOOL LIFE UP TO 300%

CVD-Vielzahn-Konturfräser – high end superfinish / ziehender Schnitt
 CVD multiple-tooth-contour mill – high-end superfinish, drawing cut

Durch Diamantpreisschwankungen empfehlen wir vor Auftragserteilung die aktuellen Preise anzufragen. Diese finden Sie auch in unserem Onlineshop.
Because of diamond price fluctuation, we ask you, to request the current prices, before ordering. You will also find the prices in our online shop.

Einstellen und Wuchten: Wir empfehlen, uns mit Ihrer Bestellung Ihre Werkzeugaufnahme zur Verfügung zu stellen. Diese wird dann mit dem neu eingestellten Messerkopf gewuchtet. Nur so ist ein Spiegelfinish zu erreichen. Alle Diamant-Fertigschneider sind mehrfach nachschleifbar. Zum Nachschleifen mit Karnasch Originalgeometrie bitte um Angabe für welches Material: Acryl Typ GS / Typ XT / Alu weich / Messing weich / Kupfer weich / Titan

Adjusting and balancing: We recommend that you make the tool holder available to us when making your order. Your tool holder will be balanced with the newly adjusted cutter head. This is the only way to achieve a mirror finish. All natural diamond finishing cutter can resharpened. We ask to specify which material should be machined: Acrylic type GS / type XT / Aluminum soft / Brass / Copper / Titanium

Powerkammer
Powerchamber

Vorteile / Advantages

- Erhöhter Kühlmittelaustritt auch bei niedrigem Druck
- Erhöhter Kühlmittelaustritt bei gleichem Druck
- Increased cooling pressure even at a lower pressure
- Increased cooling pressure at identical pressure

Die Aktuelle Produktion wird bis Ø 1,45 mm auf die Ausführung mit Powerkammer-Schaft umgestellt.

The current production until Ø 1,45 mm will be changed in a shank with a powerchamber.

HSC- und HPC-Vollhartmetall-Minibohrer mit Innenkühlung

Ø 0,8 - 0,95 mm 6xD-12xD
 Ø 1,0 - 2,95 mm 6xD-12xD-18xD

HSC- and HPC-solid carbide mini drill with interior cooling supply

Ø 0,8 - 0,95 mm 6xD-12xD
 Ø 1,0 - 2,95 mm 6xD-12xD-18xD

- Neue Perspektive durch Innenkühlung ab 0,8 Ø mm
6xD – 12xD – 18xD
New perspective through interior cooling supply from 0,8 Ø mm
6xD – 12xD – 18xD
- Reduzierte Taktzeiten
Reduced cycle-times
- Überlegene Leistung
Superior performance
- Weltweit einmalige Ausführung
Worldwide unique version
- Prozesssicher
Process reliability

Vollhartmetall-Hochleistungsflachkopfbohrer für Aluminium
Solid carbide shallow drill 180° for aluminum

- Alu-
minium**
- Aluminium
< 12% Si
- MESSING**
brass
- Kupfer**
copper
- Kunststoff**
plastic

Auf ebenen Flächen [0°] empfehlen wir eine Pilotbohrung mit unserem VHM-Bohrer 22 0405 / 22 0406.
We recommend a pilot hole with our solid carbide drill 22 0405 / 22 0406 on flat surfaces [0°].

Einsatzempfehlung: Wir empfehlen über 12xD Bohrtiefe eine Pilotbohrung mit 22 0402 oder 22 0405 in der jeweils kürzesten Ausführung. Bei schrägen Flächen empfehlen wir unseren VHM-Bohrer 22 0404.

☞ Sonderpreis / Sale Artikel. Lieferbar solange Vorrat.

Application recommendation: We recommend over 12xD drilling depth a pilot drilling with 22 0402 or 22 0405 in each case the short version. We recommend our solid carbide drill 22 0404 on bevel surfaces.

☞ Special price / sale article. While stocks last.

22 0392

Auf ebenen Flächen [0°] empfehlen wir eine Pilotbohrung mit unserem VHM-Bohrer 22 0405 / 22 0406.
We recommend a pilot hole with our solid carbide drill 22 0405 / 22 0406 on flat surfaces [0°].

IQ-DRILL 4-Fasen Bohrer für H7- Bohrung 5xD und 8xD mit/ohne Innenkühlung. Wir optimieren Ihre Fertigung. IQ-DRILL 4-chamfer 5xD and 8xD with/without interior cooling supply. We optimize your production.

22 0424

22 0425

(Abb. 3)

(Abb. 2)

(Abb. 1)

1 Diese Neuentwicklung aus unserem Hause erfüllt höchste Anforderungen an die Bohrungsqualität. Auf Reiboperationen kann in vielen Fällen verzichtet werden.

This new development from Karnasch meets highest demands on drill quality. Reaming after drilling is often not necessary any more.

2 4 Fasen optimal am Bohrumfang positioniert (Abb. 1) erschließen neue Anwendungen. Diese zusätzlichen Führungsfasen stabilisieren bereits in der Anbohrfase entscheidend das weitere Bohrverhalten.

4 chamfer are optimal ajustet on the drill-diameter (see picture 1) develops new application. This additional guide-chamfer stabilizes already on the very beginning of drilling and is responsible for the further drilling process.

3 Mit IQ-Drill garantieren wir eine maximale Fluchtungsgenauigkeit (Abb. 2) und Koaxialität bei extremen Bohrtiefen besonders über 5xD Bohrtiefe.

IQ-Drill guarantees maximal alignment accuracy (see picture 2) and coaxiality in particular for drilling depths exceeding 5xD.

4 Durch das einzigartige Eigenzentrierverhalten, auch bei unterbrochenem Schnitt, (Abb. 3) bleibt die Rundheit und Fluchtungsgenauigkeit mit IQ-Drill nahezu konstant.

Because of the extraordinary self-centering-ability, also by interrupting drill holes (see picture 3), the alignment and concentricity stays almost constant.

5 Vorteile beim Einsatz mit IQ-Drill · Advantages IQ-Drill:

- kein Anzentrieren / no center drilling
- kein Vorbohren / no predrilling
- kein Aufbohren / no counterboring
- keine Bohrbuchse / no drill bushing
- hohe Oberflächenqualität / Reibqualität
- high surface quality / reamer quality
- hohe Fluchtungsgenauigkeit / high alignment accuracy
- Toleranz H7 / tolerance H7

EIGENSCHAFTEN · PROPERTIES

HSS-XE Stahl

Gefertigt aus hochlegiertem Spezialstahl "XE" für wesentlich höhere Standzeiten gegenüber HSS-Stähle.

Zum Senken in folgende Materialien:

- Edelstähle (V2A)
- Stahl
- Guss
- Bunt- und Leichtmetalle

Bohr- und Senkstufe sind jeweils mit eigenen Span-Nuten und Führungsfasen gefertigt. Dadurch mehrmaliges Nachschleifen möglich.

HSS-XE steel

Made of high-alloyed special steel „XE“ for considerably longer service life than HSS-steel.

For countersinking in materials:

- High-alloyed chromium steel such as stainless (V2A)
- Steel
- Cast iron
- Non ferrous metals

Drill and counterbore each with its own chip flutes and guide chamfers. This means it can be reground many times.

40 1010

HSS-XE Mehrfasen-Stufenbohrer, DIN 8374, 90°, Gütegrad fein für Durchgangsloch
HSS-XE subland drill, DIN 8374, 90°, fine grade for through holes

Verwendung: Gewindekernloch und Ansenkung werden genau fluchtend zueinander in einem Arbeitsgang gefertigt. Für Gewinde-Kernloch-Bohrungen nach DIN 336 Blatt 1 mit Ansenkungen 90° (ähnlich DIN 69, Gütegrad mittel).

Use: Tapping hole and countersink are produced in one operation. For drilling tapping holes to DIN 336 sheet 1 with 90° countersinking (similar DIN 69, medium grade).

Bohr- und Senkstufe sind jeweils mit eigenen Span-Nuten und Führungsfasen gefertigt. Dadurch mehrmaliges Nachschleifen möglich.
 Drill and counterbore each with its own chip flutes and guide chamfers. This means it can be reground many times.

EIGENSCHAFTEN · PROPERTIES

HSS-XE Stahl + TITAN-TEC beschichtet
 Gefertigt aus hochlegiertem Spezialstahl „XE“ für wesentlich höhere Standzeiten gegenüber HSS-Stähle.
 TITAN-TEC Beschichtung für eine nochmalige wesentliche Erhöhung der Standzeit auch bei Trockenbearbeitung (ohne/wenig Kühlung)

- Zum Senken in folgende Materialien:**
- Edelstähle (V2A / V4A)
 - Stahl
 - Guss
 - Bunt- und Leichtmetalle

HSS-XE steel + TITAN-TEC coated
 Made of high-alloyed special steel „XE“ for considerably longer service life than HSS-steel.
 TITAN-TEC coating for a further substantial increase in service life also when machining dry (no/less cooling)

- For countersinking in materials:**
- High-alloyed chromium steel such as stainless (V2A / V4A)
 - Acid resistant steel
 - Steel
 - Cast iron
 - Non ferrous metals

HSS-XE + TITAN-TEC Mehrfasen-Stufenbohrer, DIN 8374, 90°, Gütegrad fein für Durchgangsloch
HSS-XE + TITAN-TEC subland drill, DIN 8374, 90°, fine grade for through holes

Verwendung: Besonders geeignet für NC-Maschinen, da hohe Positionsgenauigkeit, beste Zentriereigenschaft und sehr stabil. Das vorherige Zentrieren kann deshalb oft entfallen. Sehr stabile und enge Rundlauf-toleranzen zwischen Bohr- und Senkdurchmesser garantieren exakte Fluchtung. Für Schrauben-Durchgangslöcher nach DIN-ISO 273 und Senkungen nach DIN 74, Blatt 1, Form A, Gütegrad fein. Für Schrauben nach ISO 2009, 2010, 7046, 7047 (DIN 963, 964, 965, 966).

Use: Particular suitable for NC machines due to high positional accuracy, excellent centering properties and great sturdiness. The preceding centering operation can thus often be omitted. Very sturdy and tight concentricity tolerances between drill Ø and counterbore Ø guarantee exact alignment. For through holes for screws to DIN-ISO 273 and counter-sinks to DIN 74, sheet 1 form A fine grade. For screws to ISO 2009, 2010, 7046, 7047 (DIN 963, 964, 965, 966).

Verwendung: Bohrung und Senkung werden in einem Arbeitsgang genau fluchtend zueinander gefertigt. Daher sehr stabile und enge Rundlauf toleranzen.

Besonders geeignet für NC-Maschinen, da hohe Positionsgenauigkeit, beste Zentriereigenschaft und sehr stabil. Das vorherige Zentrieren kann deshalb oft entfallen. Für Gewindekernlochbohrungen nach DIN 336 Blatt 1 mit Ansenkung 90°. Der nachfolgende Gewindebohrer schneidet dadurch nicht an der scharfen Bohrkante an.

Use: Hole and countersink are produced in one operation and precisely aligned. Therefore very sturdy and tight concentricity tolerances. Particular suitable for NC machines due to high positional accuracy, excellent centering properties and great sturdiness. The preceding centering operation can thus often be omitted. For thread tapping drill holes to DIN 336 sheet 1 with 90° countersink. In the following operation, the tap therefore does not have to cut into the sharp edge of the hole

Verwendung: Für Schrauben- und Durchgangslöcher nach DIN-ISO 273 und Senkungen nach DIN 74 Blatt 1 Form A, Ausführung mittel. Für Schrauben nach ISO 2009, 2010, 7046, 7047 (DIN 963, 964, 966). Besonders geeignet für Bohrungen mit gleichzeitiger Ansenkung in Profilmaterial.

Use: For through holes for screws DIN-ISO 273 and countersinks to DIN 74, sheet 1 form A, medium grade. For screws to ISO 2009, 2010, 7047 (DIN 963, 964, 966). Especially suitable for holes with simultaneous countersinking in profile material.

Durchgangsloch mit Senkung für Schraubenkopf in einem Arbeitsgang gebohrt.

Through hole with counterbore for screw head drilled in one operation.

| < 900 N | < 900 N | | > 10% Si | | |

EIGENSCHAFTEN · PROPERTIES

HSS-XE Stahl + TITAN-TEC beschichtet
 Gefertigt aus hochlegiertem Spezialstahl „XE“ für wesentlich höhere Standzeiten gegenüber HSS-Stähle.
 TITAN-TEC Beschichtung für eine nochmalige wesentliche Erhöhung der Standzeit auch bei Trockenbearbeitung (ohne/wenig Kühlung)

- Zum Senken in folgende Materialien:**
- Edelstähle (V2A / V4A)
 - Stahl
 - Guss
 - Bunt- und Leichtmetalle

HSS-XE steel + TITAN-TEC coated
 Made of high-alloyed special steel „XE“ for considerably longer service life than HSS-steel.
 TITAN-TEC coating for a further substantial increase in service life also when machining dry (no/less cooling)

- For countersinking in materials:**
- High-alloyed chromium steel such as stainless (V2A / V4A)
 - Acid resistant steel
 - Steel
 - Cast iron
 - Non ferrous metals

HSS-XE + TITAN-TEC Kurzstufenbohrer für Kernloch, 90° Ansenkung
HSS-XE + TITAN-TEC stub jobber drills for tapping holes, 90° countersink

40 2060

Verwendung: Bohrung und Senkung werden in einem Arbeitsgang genau fluchtend zueinander gefertigt. Daher sehr stabile und enge Rundlauf toleranzen.

Besonders geeignet für NC-Maschinen, da hohe Positionsgenauigkeit, beste Zentriereigenschaft und sehr stabil. Das vorherige Zentrieren kann deshalb oft entfallen. Für Gewindekernlochbohrungen nach DIN 336 Blatt 1 mit Ansenkung 90°. Der nachfolgende Gewindebohrer schneidet dadurch nicht an der scharfen Bohrkante an.

Use: Hole and countersink are produced in one operation and precisely aligned. Therefore very sturdy and tight concentricity tolerances. Particular suitable for NC machines due to high positional accuracy, excellent centering properties and great sturdiness. The preceding operation can thus often be omitted. For thread tapping drill holes to DIN 336 sheet 1 with 90° countersink. In the following operation, the tap therefore does not have to cut into the sharp edge of the hole

HSS-XE + TITAN-TEC Kurzstufenbohrer mit langer Bohrstufe für Durchgangsloch 90°
HSS-XE + TITAN-TEC stub subland drill with long drilling step for through holes 90°

High-Precision-Werkzeuge aus dem Hause Karnasch

High-Precision-Tools from Karnasch

Metallverarbeitende Unternehmen brauchen die absolute Gewissheit, mit hochwertigen, leistungsstarken und prozesssicheren Werkzeugen zu arbeiten. Karnasch Professional Tools bietet das, worauf es ankommt!

Wir sind ein weltweit agierendes Unternehmen mit Hauptsitz im badischen Heddeshheim sowie in Görsdorf (Brandenburg), das

- Hochleistungswerkzeuge zur Metallverarbeitung von herausragender Qualität produziert und vertreibt,
- seit 1961 auf dem Markt tätig ist und dementsprechend über große Erfahrung, umfassendes Know-how sowie überdurchschnittliche Kundenorientierung verfügt,
- durch intelligente Lagerhaltung jederzeit die sofortige Lieferbarkeit seiner Produkte garantiert,
- in vielen Regionen der Welt Vertriebspartner hat, damit auch für Ihre Auslandsniederlassungen eine permanente Versorgung und begleitender Service gewährleistet ist,
- Support groß schreibt und diesen Anspruch u.a. durch eine Service-Hotline auch erfüllt,
- mit der Eröffnung einer Niederlassung in Görsdorf (Brandenburg) bereits im Jahr 1992 auf gesamtdeutsche Präsenz gesetzt hat.

Weltweit zählen Kunden aus folgenden Bereichen auf Karnasch Professional Tools:

- Werkzeug- und Formenbau,
- Luft- und Raumfahrt,
- Automobilindustrie,
- Schiff- und Eisenbahnbau,
- Hoch-, Stahl- und Brückenbau,
- Dental.

Metal working companies require absolute certainty to work with high-quality, high-performance and reliable tools. Karnasch Professional Tools offers all that matters!

We are a family-run business that is actively involved on a worldwide scale, with our head office in Heddeshheim in Baden and Görsdorf (Brandenburg), which

- produces and distributes excellent quality, high performance tools for metal working,
- has been active in the market since 1961 and has accordingly obtained invaluable experience, comprehensive know-how and above average customer orientation,
- guarantees immediate availability of our products at any time thanks to intelligent stock-keeping,
- has sales partners in many regions of the world, and can thus also ensure a continuous and accompanying service for your overseas branches.
- places an emphasis on support and fulfils this claim via, amongst other things, a service hotline.
- cemented our presence throughout Germany with the opening of a branch in Görsdorf (Brandenburg) in 1992.

Our customers predominantly come from the following sectors:

- Tool and mould making,
- Aviation and astronautics,
- The automotive industry,
- Shipbuilding and railway construction,
- Structural engineering, steel construction and bridge building,
- Dental.

- Paste haftet am Werkzeug.
- Kein Tropfen und Umherspritzen.

Ideal zum Arbeiten in Zwangslagen wie z.B. „Überkopfeinsatz“ und bei Maschinen ohne Kühlmittleinrichtung.

Verwendung: Erhöht signifikant die Standzeiten und Oberflächengüte beim: Sägen, Fräsen, Gewindeschneiden, Reiben, Bohren, Drehen. Zum Zerspanen aller Stähle sowie schwierigster Materialien wie Titan-, Mangan-, Stahlguss-, Chrom-Nickel oder Molybdän-Stählen. Hervorragend auch für alle Nichteisenmetalle wie Alu, Kupfer, Messing.

- The paste sticks to the tool.
- No dripping or splashing

Ideal for working under difficult circumstances e.g. "Overhead use" and for machines without cooling device.

Application: Increases tool life and surface finish significantly when: sawing, milling, tapping, grinding, drilling.

For machining all kind of steels. Also excellent for extremely difficult materials such as titanium-, manganese-, cast steel-, chrome-nickel or molybdenum steels. Also excellent for all non-ferrous metals such as aluminum, copper, brass.

MULTIDIREKTIONAL

Chaotische Ausrichtung des Faserverlaufs
 Chaotic alignment of fibre progress

A Delamination und Gratbildung mit konventionellen Bohrern.
B Sauberer Bohrungsaustritt durch optimierte Führungsfase des Bohrwerkzeuges.

Diamantbeschichtete VHM-Hochleistungsbohrer für CFK/GFK – multidirektional – mit 90° Spitzwinkel vermeidet Delamination
 Diamond-coated solid-carbide drill for CFRP/GFRP – multidirectional – with 90° tip angle, prevents delamination

Durch 2 Führungsphasen ist eine sehr hohe Präzision der Bohrungen möglich, bei gleichzeitiger Vermeidung von Delamination.

With 2 guide chamfer is a very high precision of the holes possible, by avoiding of delamination.

ROBO-Stack-Drill, VHM-Hochleistungsbohrer mit Innenkühlung CFK/TITAN – TITAN/CFK
Solid carbide ROBO-Stack-drill with interior cooling for CFRP/GFRP-Titan – Titan-CFRP/GFRP

 **29 0260**

-  CFK/GFK - CFRP/GFRP
-  Titan - Titanium
-  Titan - Titanium
-  CFK/GFK - CFRP/GFRP

WARUM SPATENBOHRER · WHY SPADE DRILLS

Reduzieren Sie Ihre Kosten pro Bohrung durch Karnasch Spatenbohrer

Spatenbohrer sind das Hauptprodukt von Karnasch im Bereich Bohrer mit auswechselbaren Schneidköpfen. Spatenbohrer sind hocheffiziente Bohrwerkzeuge mit herausragenden Leistungsparametern. Spatenbohrer ersetzen die veraltete Bohrtechnik der komplett aus HSS / HSS-Co Kobalt / Pulverstahl bestehenden Bohrwerkzeuge. Spatenbohrer sind eine hervorragende Ergänzung für den Bereich Vollhartmetallbohrer. Spatenbohrer bestehen aus 2 Teilen – Halter und Schneideinsätze.

Die Vorteile sind:

- 1 Es werden nur 14 Halter benötigt um den Durchmesserbereich Ø 9,5 – 114 mm abzudecken.
- 2 Innere Kühlmittelzufuhr für hervorragende Spanabfuhr auch bei tiefen Bohrungen.
- 3 Die hochpräzise Verbindung zwischen Halter und Schneideinsatz gewährleistet engste Toleranzen und leicht zu wechselnde Schneideinsätze.
- 4 Die Schneideinsätze sind aus Pulverstahl oder Hartmetall gefertigt, in Toleranz h8. Zusätzlich erhalten alle Schneideinsätze eine auf Ihren Einsatzzweck optimierte Beschichtung. Aus dieser Kombination resultieren wesentlich höhere Schnittleistungen / Standzeiten als bei konventionellen Bohrwerkzeugen. (Einsatzparameter siehe Seite 1304-1311)
- 5 Durch schnellen Austausch der Schneideinsätze ist der Spatenbohrer sofort wieder einsatzbereit. Nicht nötig (wie bei konventionellen Vollstahl-Bohrern) den kompletten Bohrer zur Aufarbeitung / Schärfen zu schicken.
- 6 Die optimierte XR-Schneidkante an den Schneideinsätzen reduziert erheblich die Zerspanungskräfte.
- 7 Unter anderem verfügen alle Schneideinsätze über eine „Spanbrecher-Funktion“ welche nochmals die Stabilität während des Bohrvorgangs erhöht.

Reduce your drilling cost by using KARNASCH spade drill

Spade drill is one of the main interchangeable insert drill from KARNASCH. It is a high efficient drilling tool with superior performance, designing to substitute those traditional hole drilling products with low efficiency and inconvenient usage. It consists of two parts – holder and inserts.

Its advantages are:

- 1 Only 14 holders can meet the demand for drilling holes from Ø 9.5 to Ø 114 mm.
- 2 Inner cooling design of holder enable excellent chip removal and good cooling when drilling deep holes.
- 3 High accuracy of the connections between the inserts and holders ensures high clamping accuracy, and easy to replace inserts.
- 4 Inserts are made of powder high speed steel or carbide, in tolerance h8, combined with various coatings. This improves extremely the tool life and drilling speed in comparison to normal twist drills (see cutting data page 1304-1311).
- 5 Replaceable structure, which is more convenient. No need of regrinding drill on the scene.
- 6 New type XR edge reduce the cutting resistance greatly.
- 7 Inserts have the function of chip-breaker, which improves the stability of holes drilling.

WARUM SPATENBOHRER · WHY SPADE DRILLS

Spatenbohrer sind das ideale Bohrwerkzeug für alle modernen CNC-Maschinen wie zum Beispiel:

- Numerisch gesteuerte Säulenbohrmaschinen / Radialbohrmaschinen
- Numerisch gesteuerte Drehmaschinen
- Bearbeitungszentren

Vorzugsweise werden hier Hartmetall-Einsätze angewendet

Spade drill is the perfect drilling tool match all kinds of modern CNC machines such as:

- Numerically controlled planar drill
- Numerically controlled lathe
- Machining centers

Preferably carbide insert are applied

Spatenbohrer sind das ideale Bohrwerkzeug für alle traditionellen / manuellen Bohrmaschinen wie zum Beispiel:

- Säulenbohrmaschinen
- Radialbohrmaschinen
- Alle Arten von vertikalen Bohrmaschinen
- Nicht numerisch gesteuerte Drehmaschinen

Vorzugsweise werden hier Pulverstahl-Einsätze angewendet

Spade drill is the perfect drilling tool match all kinds of traditional / manual drilling machines such as:

- Pillar drilling machines
- Radial drilling machines
- Vertical driller
- Non numerically controlled lathe

Preferably powder steel insert are applied

BESCHREIBUNG DES EINSATZES · DESCRIPTION OF INSERT MODEL

Spanbrecher

- Durch Spanbrecher bessere Spanabfuhr sowie weniger Schnittkräfte.

Chip breaker

- Chip breaking, better chip removal
- Reduce drilling torque

Beschichtung

Alle Einsätze erhalten spezielle Beschichtungen

Coating

All inserts receives special coatings

Spanteilerrillen

- Reduziert die Spanlänge.
- Dadurch bessere Spanabfuhr sowie reduzierte Schnittkräfte.

Chip dividing groove

- Reduce cutting width
- Better chip removal
- Reduce drilling torque

Durchmesser-Fase

- Verbessert die Stabilität des Schneideinsatzes.
- Reduziert den Verschleiß des Außendurchmessers am Schneideinsatz.
- Verbessert die Oberfläche am Werkstück.

Diameter chamferer

- Increase the strength of insert
- Reduce the wear & tear of outer diameter
- Improve the smoothness on the surface of workpiece

Bohrerspitze

- Durch ausgespitzte Zentrumsschneiden werden die axialen Kräfte bis zu 20% gegenüber konventionellen Bohrern reduziert.

Core drilling

- Thinner core drilling, which reduce 20% axial resistance compared with normal drilling products.
- Better self-centering

XR-Querschneid-Schliff

- Verbessert die Stabilität der Schneidkanten.
- Verbessert im Allgemeinen nochmals die Stabilität des gesamten Schneideinsatzes.

Zwei Rückenflankenflächen

- Reduziert die Reibung mit dem Werkstück.
- Verbessert die Selbstzentrierung.
- Reduziert die axialen Kräfte.

Two back flank surfaces

- Reduce the friction with the workpiece
- Better self-centering
- Reduce the axial resistance

Fix screw holes

- Safe and reliable clamping
- Ensure the stability during drilling

Location groove

- Ensure the accuracy of the radial direction

Befestigungsbohrungen

- Sichere und zuverlässige Befestigung der Schneideinsätze für höchste Stabilität während des Bohrvorgangs.

Positionierungs-Nut

- Gewährleistet die akkurate Positionierung der Schneideinsätze bei der radialen Drehbewegung.

Bei Morsekonus 2+3 ist eine axiale Kühlung ohne Kühlmittelring möglich.
 Hierzu muss das Gewinde des Kühlmittelringes (G) mit einer Schraube geschlossen werden.
 With morse cone 2+3, axial cooling without coolant ring is possible.
 For this, the thread of the coolant ring (G) must be closed with a screw.

- Schraube für MK 2 / Screw for MT 2 = RC 1/16" **22 1030 0231 802 € 0,30**
- Schraube für MK 3 / Screw for MT 3 = RC 1/8" **22 1030 0231 803 € 0,30**

Halter werden **ohne** Einsätze, inklusive 2x TORX Befestigungsschrauben und 1x TORX Schlüssel geliefert.
Holders are delivered **without** inserts including 2x TORX-screws and 1x TORX wrench.

Für Maschinen ohne axiale/radiale Kühlmittelzufuhr kann ein Kühlmittelring auf den Halter montiert werden. Details siehe Seite 356
For machines without radial/axial coolant supply a oil ring can be mounted on the holder. Details see page 356

Halter werden **ohne** Einsätze, inklusive 2× TORX Befestigungsschrauben und 1× TORX Schlüssel geliefert.
Holders are delivered **without** inserts including 2× TORX-screws and 1× TORX wrench.

Für Maschinen ohne axiale/radiale Kühlmittelzufuhr kann ein Kühlmittelring auf den Halter montiert werden. Details siehe Seite 356
For machines without radial/axial coolant supply a oil ring can be mounted on the holder. Details see page 356

MK 2+3 mit axialer Kühlung
MT 2+3 with axial cooling

Bei Morsekonus 2+3 ist eine axiale Kühlung ohne Kühlmittelring möglich.
Hierzu muss das Gewinde des Kühlmittelringes (G) mit einer Schraube geschlossen werden.

With morse cone 2+3, axial cooling without coolant ring is possible.
For this, the thread of the coolant ring (G) must be closed with a screw.

Schraube für MK 2 / Screw for MT 2 = RC 1/16" **22 1030 0231 802** € 0,30

Schraube für MK 3 / Screw for MT 3 = RC 1/8" **22 1030 0231 803** € 0,30

Bei Morsekonus 2+3 ist eine axiale Kühlung ohne Kühlmittelring möglich. Hierzu muss das Gewinde des Kühlmittelringes (G) mit einer Schraube geschlossen werden.

With morse cone 2+3, axial cooling without coolant ring is possible. For this, the thread of the coolant ring (G) must be closed with a screw.

Schraube für MK 2 / Screw for MT 2 = RC 1/16" **22 1030 0231 802 € 0,30**

Schraube für MK 3 / Screw for MT 3 = RC 1/8" **22 1030 0231 803 € 0,30**

Bei Morsekonus 2+3 ist eine axiale Kühlung ohne Kühlmittellring möglich.
Hierzu muss das Gewinde des Kühlmittellringes (G) mit einer Schraube geschlossen werden.

With morse cone 2+3, axial cooling without coolant ring is possible.
For this, the thread of the coolant ring (G) must be closed with a screw.

- Schraube für MK 2 / Screw for MT 2 = RC 1/16" **22 1030 0231 802 € 0,30**
- Schraube für MK 3 / Screw for MT 3 = RC 1/8" **22 1030 0231 803 € 0,30**

Halter werden **ohne** Einsätze, inklusive 2x TORX Befestigungsschrauben und 1x TORX Schlüssel geliefert.
Holders are delivered **without** inserts including 2x TORX-screws and 1x TORX wrench.

Für Maschinen ohne axiale/radiale Kühlmittelzufuhr kann ein Kühlmittelring auf den Halter montiert werden. Details siehe Seite 356
For machines without radial/axial coolant supply a oil ring can be mounted on the holder. Details see page 356

Halter werden **ohne** Einsätze, inklusive 2x TORX Befestigungsschrauben und 1x TORX Schlüssel geliefert.
Holders are delivered **without** inserts including 2x TORX-screws and 1x TORX wrench.

Für Maschinen ohne axiale/radiale Kühlmittelzufuhr kann ein Kühlmittelring auf den Halter montiert werden. Details siehe Seite 356
For machines without radial/axial coolant supply a oil ring can be mounted on the holder. Details see page 356

Halter werden **ohne** Einsätze, inklusive 2x TORX Befestigungsschrauben und 1x TORX Schlüssel geliefert.
Holders are delivered **without** inserts including 2x TORX-screws and 1x TORX wrench.

Für Maschinen ohne axiale/radiale Kühlmittelzufuhr kann ein Kühlmittelring auf den Halter montiert werden. Details siehe Seite 356
For machines without radial/axial coolant supply a oil ring can be mounted on the holder. Details see page 356

Halter werden **ohne** Einsätze, inklusive 2x TORX Befestigungsschrauben und 1x TORX Schlüssel geliefert.
Holders are delivered **without** inserts including 2x TORX-screws and 1x TORX wrench.

Für Maschinen ohne axiale/radiale Kühlmittelzufuhr kann ein Kühlmittelring auf den Halter montiert werden. Details siehe Seite 356
For machines without radial/axial coolant supply a oil ring can be mounted on the holder. Details see page 356

EIGENSCHAFTEN · PROPERTIES

ASP-Pulverstahl Bohrer mit Innenkühlung + BLUE-TEC Beschichtung

Gefertigt aus pulvermetallurgischen Schnellarbeitsstahl für:

- Hohe Warmhärte
- Hohe Druckbelastbarkeit
- Hohe Verschleißfestigkeit

Mit BLUE-TEC Beschichtung für eine nochmalige wesentliche Erhöhung der Standzeit auch bei Trockenbearbeitung (ohne/wenig Kühlung)

Zum Bohren in:

- Alle Sorten von Baustähle, Guss und Leichtmetallen.
- Edeltähle (V2A / V4A)
- Rost- und Säurebeständige Stähle
- Titan- und Titanlegierungen

Diese Bohrer sind bis zu 10-mal nachschleifbar und haben somit ein hervorragendes Preis-Leistungs-Verhältnis.

ASP-Powder steel twist drills with internal cooling supply + BLUE-TEC coating

Made of powder metallurgy high speed steel which results to:

- good thermal curing
- high pressure resistance
- high wear resistance

With BLUE-TEC coating for a further substantial increase in service life also when machining dry (no/little cooling)

For drilling in:

- All kinds of structural steel, cast iron, non ferrous metals.
- High-alloyed chromium steel such as stainless (V2A / V4A)
- Acid resistant steel
- Titanium and titanium alloys

The drills can be resharpended up to 10 times and thus have an excellent cost - performance ratio.

Die Kombination Kernbohrer mit Säge-Bohranlagen ist nicht für die Serienproduktion gedacht, ist aber eine hervorragende Möglichkeit sehr preiswert große Bohrungen zu fertigen.

The combination saw-drilling machines with annular cutters is not intended for mass production, it represents an excellent way to produce very inexpensive large holes.

HARTMETALL-BESTÜCKTE KERNBOHRER CARBIDE-TIPPED ANNULAR CUTTERS

HARD-LINE

Der beste Kernbohrer ist grundsätzlich Hartmetall-bestückt.

Nur diese Bohrer bieten das optimale Preis-Leistungs-Verhältnis für nahezu alle Materialien. Neben der höchsten Standzeit in allen Stählen bieten nur Hartmetall-bestückte Kernbohrer:

- Bohren in Stähle bis 40 Rockwell (HRC)
- Bohren in alle Edelstähle
- Bohren in schwierigste Legierungen (Hardox/Inconel/Titan)
- Bohren hervorragend auch in weiche Werkstoffe wie Alu, Kupfer, Messing u.ä.

Mit Durchmessern von 12-150 mm in Schnitttiefen von 40 mm, 55 mm, 80 mm, 110 mm steht Ihnen weltweit das umfangreichste Lagerprogramm zur Verfügung.

The fact is: The best annular cutters are carbide tipped.

Only these drills offer the best value for money for almost all materials. Besides maximum cutting capacity in all kind of steels provide only carbide tipped annular cutters:

- Drilling in hardened steel up to 40 Rockwell (HRC)
- Drilling in all sorts of stainless steel
- Drilling in most difficult alloys (Hardox/Inconel/Titan)
- Drilling also excellent in all non-ferrous metals such as alu, copper, brass

Available in diameter 12-150 mm. Available in drill depths 40 mm, 55 mm, 80 mm and 110 mm. Simply the world's largest stock range of carbide tipped annular cutter.

EIGENSCHAFTEN · PROPERTIES

Karnasch Hartmetall-bestückte Kernbohrer (HARD-LINE) werden mit konischer Spirale gefertigt für: Sauberen Spanfluss und höchste Zerspanleistung auch bei schwierigen Materialien.

Karnasch carbide tipped annular cutters (HARD-LINE) are made with a conical helix for: clean chip flow and highest cutting ability even with difficult materials.

Karnasch Hartmetall-bestückte Kernbohrer (HARD-LINE) werden ausschließlich mit Sandvik Hartmetallzähnen bestückt. Wir meinen: Nur das beste Hartmetall ist gut genug für Karnasch Kernbohrer.

Karnasch carbide tipped annular cutters (HARD-LINE) are exclusively equipped with Sandvik carbide teeth. Our opinion is: Only the best carbide is good enough for Karnasch annular cutters.

Karnasch Hartmetall-bestückte Kernbohrer (HARD-LINE) sind in einer aufwendigen Vor-Mittel-Nachsneider-Geometrie gefertigt. Dies ergibt: ratterfreies, ruhiges und leichtes Zerspanen mit höchsten Standzeiten.

Karnasch carbide tipped annular cutters (HARD-LINE) are made in an elaborate pre-/intermediate-/after-cutting geometry. This results in: clatter-free, silent and easy cutting with highest lifetimes.

Packnorm 2 Stk. · Packaging unit 2 pcs.

Packnorm 2 Stk. · Packaging unit 2 pcs.

ANWENDUNG AUSWERFERSTIFTE 2-TEILIG
APPLICATION EJECTOR PINS 2-PIECE

Anwendung:

Teil 1 in den Schaft des Kernbohrers einführen. Teil 2 auf Teil 1 schieben. Bohren Sie bis ca. 50 mm Schnitttiefe. Danach Teil 2 entfernen und weiter bohren.

Application:

Insert piece 1 into the annular cutter shank. Push piece 2 onto part 1. Drill as deep as 50 mm cutting depth. Then remove piece 2 and continue drilling.

* Warum 2-teilige Auswerferstifte? In der Regel haben Standard Morsekonus-Aufnahmehalter eine Schnitttiefenkapazität von 50 mm. Wenn keine extra langen Aufnahmehalter verwendet werden (wie auf Seite 522–523 Art. 20 1842, 20 1291, 20 1843, 20 1845, 20 1846), müssen bei Schnitttiefen über 50 mm 2-teilige Auswerferstifte verwendet werden.

* Why use 2-part ejector pins? Usually, standard Morse taper holders have a cutting depth capacity of 50 mm. If no extra-long holders are used (e.g. as on page 522–523 Art. 20 1842, 20 1291, 20 1843, 20 1845, 20 1846), you need for drill depths above 50 mm 2-part ejector pins.

Einteilige Auswerferstifte siehe nächste Seite · One-piece ejector pins see next page

Packnorm 2 Stk. · Packaging unit 2 pcs.

ANWENDUNG AUSWERFERSTIFTE 2-TEILIG APPLICATION EJECTOR PINS 2-PIECE

Anwendung:

Teil 1 in den Schaft des Kernbohrers einführen. Teil 2 auf Teil 1 schieben. Bohren Sie bis ca. 50 mm Schnitttiefe. Danach Teil 2 entfernen und weiter bohren.

Application:

Insert piece 1 into the annular cutter shank. Push piece 2 onto part 1. Drill as deep as 50 mm cutting depth. Then remove piece 2 and continue drilling.

* Warum 2-teilige Auswerferstifte? In der Regel haben Standard Morsekonus-Aufnahmehalter eine Schnitttiefenkapazität von 50 mm. Wenn keine extra langen Aufnahmehalter verwendet werden (wie auf Seite 522–523 Art. 20 1842, 20 1291, 20 1843, 20 1845, 20 1846), müssen bei Schnitttiefen über 50 mm 2-teilige Auswerferstifte verwendet werden.

* Why use 2-part ejector pins? Usually, standard morse taper holders have a cutting depth capacity of 50 mm. If no extra-long holders are used (e.g. as on page 522–523 Art. 20 1842, 20 1291, 20 1843, 20 1845, 20 1846), you need for drill depths above 50 mm 2-part ejector pins.

Einteilige Auswerferstifte siehe nächste Seite · One-piece ejector pins see next page

**ANWENDUNG AUSWERFERSTIFTE 1-TEILIG Ø 18-19 mm
APPLICATION EJECTOR PINS 1-PIECE Ø 18-19 mm**

Verwenden Sie Auswerferstifte Art. 20 1429 und bohren Sie bis ca. 80 mm Tiefe

Mount pin Art. 20 1429 into the cutter and drill up to 80 mm cutting depth

Entfernen Sie den Kernbohrer aus der Maschine und wechseln Sie auf Auswerferstift Art. 20 1399 und bohren Sie bis zu 150 mm Tiefe weiter.

Take off the cutter and use pin Art. 20 1399 and continue drilling up to 150 mm cutting depth.

**ANWENDUNG AUSWERFERSTIFTE 2-TEILIG
APPLICATION EJECTOR PINS 2-PIECE**

Anwendung:

Teil 1 in den Schaft des Kernbohrers einführen. Teil 2 auf Teil 1 schieben. Bohren Sie bis ca. 80 mm Schnitttiefe. Danach Teil 2 entfernen und weiter bohren bis zu 150 mm Schnitttiefe.

Application:

Insert piece 1 into the annular cutter shank. Push piece 2 onto part 1. Drill as deep as 80 mm cutting depth. Then remove piece 2 and continue drilling up to cutting depth 150 mm.

ACHTUNG: Die Anwendung dieser 1+2-teiligen Auswerferstifte funktioniert nur mit extra langen Aufnahmen mit Morsekegel siehe Art. 20 1842, 20 1291, 20 1843, 20 1845, 20 1846 Seite 522/523

ATTENTION: The use of these 1+2-part ejector pins works only with extra long morse taper holders see Art. 20 1842, 20 1291, 20 1843, 20 1845, 20 1846 page 522/523

AUSWERFERSTIFTE 1-TEILIG · EJECTOR PINS 1-PIECE

20 1439
€ 13,05

1-teilig / 1 piece

Packnorm 2 Stk. · Packaging unit 2 pcs.

Zusammen mit Aufnahmehalter 20 1842, 20 1291, 20 1843, 20 1845, 20 1846 (siehe Seite 522–523) kann dieser einteilige Auswerferstift verwendet werden. Es kann ohne Umstecken bis 110 mm Schnitttiefe in einem Arbeitsgang gebohrt werden. Robust und einfach.

It is possible to use this one-piece ejector pin in combination with tool holder article 20 1842, 20 1291, 20 1843, 20 1845, 20 1846 (see page 522–523). You can drill as deep as 110 mm in one working process without changing. Robust and easy.

AUSWERFERSTIFTE 2-TEILIG EJECTOR PINS 2-PIECE

20 1427
€ 22,10

2-teilig / 2 piece

Packnorm 2 Stk. · Packaging unit 2 pcs.

ANWENDUNG AUSWERFERSTIFTE 2-TEILIG APPLICATION EJECTOR PINS 2-PIECE

Anwendung:

Teil 1 in den Schaft des Kernbohrers einführen. Teil 2 auf Teil 1 schieben. Bohren Sie bis ca. 50 mm Schnitttiefe. Danach Teil 2 entfernen und weiter bohren.

Application:

Insert piece 1 into the annular cutter shank. Push piece 2 onto part 1. Drill as deep as 50 mm cutting depth. Then remove piece 2 and continue drilling.

• **Warum 2-teilige Auswerferstifte?** In der Regel haben Standard Morsekonus-Aufnahmehalter eine Schnitttiefenkapazität von 50 mm. Wenn **keine extra langen** Aufnahmehalter verwendet werden (wie auf Seite 522–523 Art. 20 1842, 20 1291, 20 1843, 20 1845, 20 1846), müssen bei Schnitttiefen über 50 mm 2-teilige Auswerferstifte verwendet werden.

• **Why use 2-part ejector pins?** Usually, standard morse taper holders have a cutting depth capacity of 50 mm. If **no extra-long** holders are used (e.g. as on page 522–523 Art. 20 1842, 20 1291, 20 1843, 20 1845, 20 1846), you need for drill depths above 50 mm 2-part ejector pins.

HARDOX / HARTE STÄHLE KERNBOHRER HARDOX / HARD STEEL ANNULAR CUTTER

HARDOX-LINE

Der beste Kernbohrer zum Bohren in:

- Hardox 400, 450, 500
- Harte Stähle ab 30 HRC bis 50 HRC

Speziell entwickeltes Hartmetall sowie optimierte Geometrie ergeben exzellente Ergebnisse beim Bohren von HARDOX / HARTE STÄHLE (unbedingt Schnittparameter beachten).

The best annular cutter for drilling in:

- Hardox 400, 450, 500
- Hard steels from 30 HRC up to 50 HRC

Specially developed carbide as well as optimized geometry results in excellent performance for drilling in HARDOX / HARD STEEL (absolutely observe cutting parameters).

EIGENSCHAFTEN · PROPERTIES

Karnasch HARDOX-LINE Kernbohrer werden mit konischer Spirale gefertigt für sauberen Spanfluss und höchste Zerspanleistung.

Karnasch HARDOX-LINE annular cutters are made with a conical helix for clean chip flow and highest cutting ability.

Karnasch HARDOX-LINE Kernbohrer kommen mit optimiertem Hartmetall zum Bohren in HARDOX und HARTE STÄHLE.

Karnasch HARDOX-LINE annular cutters come with optimized carbide tipped teeth material for excellent results drilling in HARDOX and HARD STEEL.

Karnasch HARDOX-LINE Kernbohrer sind in einer aufwendigen Vor-/Mittel-/Nachschneider-Geometrie gefertigt. Dies ergibt: ratterfreies, ruhiges und leichtes Zerspanen mit höchsten Standzeiten.

Karnasch HARDOX-LINE annular cutters are made in an elaborate pre-/intermediate-/after-cutting geometry. This results in: clatter-free, silent and easy cutting with highest lifetimes.

PULVERSTAHL + DURABLU- BESCHICHTETE KERNBOHRER POWDER STEEL + DURABLU-COATED ANNULAR CUTTERS

BLUE-DRILL LINE PRO

Neben Hartmetall-bestückten Kernbohrern bieten beschichtete Pulverstahl-Kernbohrer ein hervorragendes Preis-Leistungs-Verhältnis.

Im harten Einsatz kann nur in den seltensten Fällen auf optimale Drehzahlen und Kühlung Rücksicht genommen werden. Die Karnasch DURABLU-Beschichtung macht den Kernbohrer somit entscheidend widerstandsfähiger. Letztendlich wird dadurch die Lebensdauer des Bohrers wesentlich erhöht.

BLUE-DRILL LINE PRO Kernbohrer sind der Problemlöser für schwierigste Zerspanungsprobleme. (Als beschichtete Standardkernbohrer empfehlen wir unsere BLUE-DRILL LINE Versionen siehe Seite 395)

Besides carbide tipped annular cutter provide coated powder steel cutters an excellent price-performance ratio.

Under hard field conditions only in the rarest cases optimum speed and cooling can be considered. The Karnasch DURABLU-coating makes the annular cutter decisively more resistant. This results finally to an extraordinary increase of lifetime.

BLUE-DRILL LINE PRO annular cutters are the right choice for most difficult materials (As standard coated annular cutters do we recommend our BLUE-DRILL LINE range see page 395)

EIGENSCHAFTEN · PROPERTIES

Gefertigt aus ASP Pulverstahl zum Bohren auch schwierigster Materialien wie Eisenbahnschienen, Edelstähle, exotische Legierungen. Immer dort einsetzbar wo höchste Verschleißfestigkeit und Standzeit benötigt wird.

Made of ASP powder steel for drilling of difficult materials like railway tracks, stainless steels, exotic alloys. Applicable wherever a high wear resistance and lifetime are required.

Unsere hochwertigsten Kernbohrer erhalten die einzigartige und patentierte DURABLU-Beschichtung. Extreme Oberflächenhärte- und -glätte ergeben extreme Standzeiten auch unter nicht optimalen Arbeitsbedingungen wie „Über Kopf arbeiten“, Trockenbohrungen, u.s.w.

Our first-class annular cutters are equipped with the unique and patented DURABLU-coating. Extreme surface hardness and sleekness yield extreme lifetimes even under non-optimum conditions like "overhead work", dry drilling, etc.

Nur wenige Hersteller sind in der Lage in Stufen gehärtete Kernbohrer zu fertigen. Für uns ist dies „Standard“. Dadurch erreichen wir extrem harte Zahnschneiden (68 HRC) und dennoch einen flexiblen Kernbohrer.

Only few manufacturers are capable of producing step-hardened annular cutters. For Karnasch this is "standard". Only this makes us produce extremely hard tooth tips (68 HRC) and yet a flexible annular cutter.

HSS-XE + DURABLU-ESCHICHTETE KERNBOHRER

HSS-XE + DURABLU-COATED ANNULAR CUTTERS

BLUE-DRILL LINE

Neben Hartmetall-bestückten Kernbohrern bieten beschichtete HSS-XE Kernbohrer das optimale Preis-Leistungs-Verhältnis.

Im harten Einsatz kann nur in den seltensten Fällen auf optimale Drehzahlen und Kühlung Rücksicht genommen werden. Die Karnasch DURABLU-Beschichtung macht den Kernbohrer somit entscheidend widerstandsfähiger. Letztendlich wird dadurch die Lebensdauer des Bohrers wesentlich erhöht.

BLUE-DRILL LINE ist der am häufigsten verwendete Karnasch Kernbohrer. Der HSS-XE Bohrer mit dem besten Preis-Leistungs-Verhältnis für alle Stähle bis 1100 N Festigkeit, sowie Edelstahl.

Besides carbide tipped annular cutters provide coated HSS-XE cutters the optimal price-performance ratio.

Under hard field conditions only in the rarest cases optimum speed and cooling can be considered. The Karnasch DURABLU-coating makes the annular cutter decisively more resistant. This results finally to an extraordinary increase of lifetime.

BLUE-DRILL LINE annular cutters are the most commonly used Karnasch cutters. These HSS-XE cutters offers the best price-performance ratio for all steels up to a strength of 1100 N and stainless steels.

EIGENSCHAFTEN · PROPERTIES

Gefertigt aus hochlegiertem HSS-XE Spezialstahl. Für extreme Härte an den Zahnsitzen (bis 68 HRC). Somit hohe Verschleißfestigkeit und Standzeit.

Made of high-alloyed HSS-XE special steel. For extreme hardness at the tip of the tooth (up to 68 HRC). A high wear resistance and lifetime.

Unsere hochwertigsten Kernbohrer erhalten die einzigartige und patentierte DURABLU-Beschichtung. Extreme Oberflächenhärte- und -glätte ergeben extreme Standzeiten auch unter nicht optimalen Arbeitsbedingungen wie „Über Kopf arbeiten“, Trockenbohrungen, u.s.w.

Our first-class annular cutters are equipped with the unique and patented DURABLU-coating. Extreme surface hardness and sleekness yield extreme lifetimes even under non-optimum conditions like "overhead work", dry drilling, etc.

Nur wenige Hersteller sind in der Lage in Stufen gehärtete Kernbohrer zu fertigen. Für uns ist dies „Standard“. Dadurch erreichen wir extrem harte Zahnsitzen (68 HRC) und dennoch einen flexiblen Kernbohrer.

Only few manufacturers are capable of producing step-hardened annular cutters. For Karnasch this is "standard". Only this makes us produce extremely hard tooth tips (68 HRC) and yet a flexible annular cutter.

Aus dem vollen Material komplett geschliffen. Dieser Feinschliff erhöht die Zerspanleistung bei gleichzeitiger Reduzierung der Reibung. Für ein Mehr an Standzeit.

Completely made "FULLY GROUND". This refining rises the cutting ability with reducing friction at the same time. For an exceeded lifetime.

BLUE-DRILL LINE / 80

ZUBEHÖR · ACCESSORIES

AUSWERFERSTIFTE 1-TEILIG · EJECTOR PINS 1-PIECE

1-teilig / 1 piece

Packnorm 2 Stk. · Packaging unit 2 pcs.

20 1439
€ 13,05

Zusammen mit Aufnahmehalter 20 1842, 20 1291, 20 1843, 20 1845, 20 1846 (siehe Seite 522–523) kann dieser einteilige Auswerferstift verwendet werden. Es kann ohne Umstecken bis 110 mm Schnitttiefe in einem Arbeitsgang gebohrt werden. Robust und einfach.

It is possible to use this one-piece ejector pin in combination with tool holder article 20 1842, 20 1291, 20 1843, 20 1845, 20 1846 (see page 522–523). You can drill as deep as 110 mm in one working process without changing. Robust and easy.

AUSWERFERSTIFTE 2-TEILIG · EJECTOR PINS 2-PIECE

2-teilig / 2 piece

Packnorm 2 Stk. · Packaging unit 2 pcs.

20 1427
€ 22,10

ANWENDUNG AUSWERFERSTIFTE 2-TEILIG · APPLICATION EJECTOR PINS 2-PIECE

Anwendung:

Teil 1 in den Schaft des Kernbohrers einführen. Teil 2 auf Teil 1 schieben. Bohren Sie bis ca. 50 mm Schnitttiefe. Danach Teil 2 entfernen und weiter bohren.

Application:

Insert piece 1 into the annular cutter shank. Push piece 2 onto part 1. Drill as deep as 50 mm cutting depth. Then remove piece 2 and continue drilling.

⚡ **Warum 2-teilige Auswerferstifte?** In der Regel haben Standard Morsekonus-Aufnahmehalter eine Schnitttiefenkapazität von 50 mm. Wenn **keine extra langen** Aufnahmehalter verwendet werden (wie auf Seite 522–523 Art. 20 1842, 20 1291, 20 1843, 20 1845, 20 1846), müssen bei Schnitttiefen über 50 mm 2-teilige Auswerferstifte verwendet werden.

⚡ **Why use 2-part ejector pins?** Usually, standard morse taper holders have a cutting depth capacity of 50 mm. If **no extra-long** holders are used (e.g. as on page 522–523 Art. 20 1842, 20 1291, 20 1843, 20 1845, 20 1846), you need for drill depths above 50 mm 2-part ejector pins.

ZUBEHÖR · ACCESSORIES

AUSWERFERSTIFTE 1-TEILIG · EJECTOR PINS 1-PIECE

7,98 x 160 mm
1-teilig / 1 piece

Art. 20 1399
€ 14,30

Packnorm 2 Stk. · Packaging unit 2 pcs.

Zusammen mit Aufnahmehalter 20 1842, 20 1291, 20 1843, 20 1845, 20 1846 (siehe Seite 522-523) kann dieser einteilige Auswerferstift verwendet werden. Es kann ohne Umstecken bis 110 mm Schnitttiefe in einem Arbeitsgang gebohrt werden. Robust und einfach.

It is possible to use this one-piece ejector pin in combination with tool holder article 20 1842, 20 1291, 20 1843, 20 1845, 20 1846 (see page 522-523). You can drill as deep as 110 mm in one working process without changing. Robust and easy.

AUSWERFERSTIFTE 2-TEILIG · EJECTOR PINS 2-PIECE

7,98 x 157 mm
2-teilig / 2 piece

Art. 20 1428
€ 24,80

Packnorm 2 Stk. · Packaging unit 2 pcs.

ANWENDUNG AUSWERFERSTIFTE 2-TEILIG · APPLICATION EJECTOR PINS 2-PIECE

Anwendung:

Teil 1 in den Schaft des Kernbohrers einführen. Teil 2 auf Teil 1 schieben. Bohren Sie bis ca. 50 mm Schnitttiefe. Danach Teil 2 entfernen und weiter bohren.

Application:

Insert piece 1 into the annular cutter shank. Push piece 2 onto part 1. Drill as deep as 50 mm cutting depth. Then remove piece 2 and continue drilling.

* **Warum 2-teilige Auswerferstifte?** In der Regel haben Standard Morsekonus-Aufnahmehalter eine Schnitttiefenkapazität von 50 mm. Wenn **keine extra langen** Aufnahmehalter verwendet werden (wie auf Seite 522-523 Art. 20 1842, 20 1291, 20 1843, 20 1845, 20 1846), müssen bei Schnitttiefen über 50 mm 2-teilige Auswerferstifte verwendet werden.

* **Why use 2-part ejector pins?** Usually, standard morse taper holders have a cutting depth capacity of 50 mm. If **no extra-long** holders are used (e.g. as on page 522-523 Art. 20 1842, 20 1291, 20 1843, 20 1845, 20 1846), you need for drill depths above 50 mm 2-part ejector pins.

HSS-XE KERNBOHRER HSS-XE ANNULAR CUTTERS

GOLD-DRILL LINE

Karnasch GOLD-DRILL LINE Kernbohrer sind die am meisten verwendeten nicht beschichteten HSS-XE Kernbohrer.

Durch spezial GOLD-TECH Oberflächenbehandlung + Vollschliff + HSS-XE Spezialstahl hervorragend zum Bohren in Stähle bis 900 N und sogar geeignet für Edelstähle.

Karnasch GOLD-DRILL LINE annular cutters are the most commonly used non-coated HSS-XE annular cutter.

By special surface treatment GOLD-TECH + FULLY GROUND + special steel HSS-XE ideal for drilling in steel up to a strength of 900 N and even suitable for stainless steels.

EIGENSCHAFTEN · PROPERTIES

Gefertigt aus hochlegiertem HSS-XE Spezialstahl. Für extreme Härte an den Zahnspitzen (bis 68 HRC). Somit hohe Verschleißfestigkeit und Standzeit.

Made of high-alloyed HSS-XE special steel. For extreme hardness at the tip of the tooth (up to 68 HRC). A high wear resistance and lifetime.

Gold-Tech Oberflächenbehandlung. Die Spezialbehandlung für höhere Standzeiten

Gold-Tech surface treatment. The special treatment for higher lifetimes.

Nur wenige Hersteller sind in der Lage in Stufen gehärtete Kernbohrer zu fertigen. Für uns ist dies „Standard“. Dadurch erreichen wir extrem harte Zahnspitzen (68 HRC) und dennoch einen flexiblen Kernbohrer.

Only few manufacturers are capable of producing step-hardened annular cutters. For Karnasch this is "standard". Only this makes us produce extremely hard tooth tips (68 HRC) and yet a flexible annular cutter.

Aus dem vollen Material komplett geschliffen. Dieser Feinschliff erhöht die Zerspanleistung bei gleichzeitiger Reduzierung der Reibung. Für ein Mehr an Standzeit.

Completely made "FULLY GROUND". This refining rises the cutting ability with reducing friction at the same time. For an exceeded lifetime.

AUSWERFERSTIFTE 1-TEILIG · EJECTOR PINS 1-PIECE

1-teilig / 1 piece

Packnorm 2 Stk. · Packaging unit 2 pcs.

20 1439
€ 13,05

Zusammen mit Aufnahmehalter 20 1842, 20 1291, 20 1843, 20 1845, 20 1846 (siehe Seite 522–523) kann dieser einteilige Auswerferstift verwendet werden. Es kann ohne Umstecken bis 110 mm Schnitttiefe in einem Arbeitsgang gebohrt werden. Robust und einfach.

It is possible to use this one-piece ejector pin in combination with tool holder article 20 1842, 20 1291, 20 1843, 20 1845, 20 1846 (see page 522–523). You can drill as deep as 110 mm in one working process without changing. Robust and easy.

AUSWERFERSTIFTE 2-TEILIG EJECTOR PINS 2-PIECE

2-teilig / 2 piece

Packnorm 2 Stk. · Packaging unit 2 pcs.

20 1427
€ 22,10

ANWENDUNG AUSWERFERSTIFTE 2-TEILIG APPLICATION EJECTOR PINS 2-PIECE

Anwendung:

Teil 1 in den Schaft des Kernbohrers einführen. Teil 2 auf Teil 1 schieben. Bohren Sie bis ca. 50 mm Schnitttiefe. Danach Teil 2 entfernen und weiter bohren.

Application:

Insert piece 1 into the annular cutter shank. Push piece 2 onto part 1. Drill as deep as 50 mm cutting depth. Then remove piece 2 and continue drilling.

* **Warum 2-teilige Auswerferstifte?** In der Regel haben Standard Morsekonus-Aufnahmehalter eine Schnitttiefenkapazität von 50 mm. Wenn **keine extra langen** Aufnahmehalter verwendet werden (wie auf Seite 522–523 Art. 20 1842, 20 1291, 20 1843, 20 1845, 20 1846), müssen bei Schnitttiefen über 50 mm 2-teilige Auswerferstifte verwendet werden.

* **Why use 2-part ejector pins?** Usually, standard morse taper holders have a cutting depth capacity of 50 mm. If **no extra-long** holders are used (e.g. as on page 522–523 Art. 20 1842, 20 1291, 20 1843, 20 1845, 20 1846), you need for drill depths above 50 mm 2-part ejector pins.

ZUBEHÖR · ACCESSORIES

AUSWERFERSTIFTE 1-TEILIG · EJECTOR PINS 1-PIECE

20 1439
€ 13,05

1-teilig / 1 piece

Packnorm 2 Stk. · Packaging unit 2 pcs.

Zusammen mit Aufnahmehalter 20 1842, 20 1291, 20 1843, 20 1845, 20 1846 (siehe Seite 522–523) kann dieser einteilige Auswerferstift verwendet werden. Es kann ohne Umstecken bis 110 mm Schnitttiefe in einem Arbeitsgang gebohrt werden. Robust und einfach.

It is possible to use this one-piece ejector pin in combination with tool holder article 20 1842, 20 1291, 20 1843, 20 1845, 20 1846 (see page 522–523). You can drill as deep as 110 mm in one working process without changing. Robust and easy.

AUSWERFERSTIFTE 2-TEILIG EJECTOR PINS 2-PIECE

20 1427
€ 22,10

2-teilig / 2 piece

Packnorm 2 Stk. · Packaging unit 2 pcs.

ANWENDUNG AUSWERFERSTIFTE 2-TEILIG APPLICATION EJECTOR PINS 2-PIECE

Anwendung:

Teil 1 in den Schaft des Kernbohrers einführen. Teil 2 auf Teil 1 schieben. Bohren Sie bis ca. 50 mm Schnitttiefe. Danach Teil 2 entfernen und weiter bohren.

Application:

Insert piece 1 into the annular cutter shank. Push piece 2 onto part 1. Drill as deep as 50 mm cutting depth. Then remove piece 2 and continue drilling.

* **Warum 2-teilige Auswerferstifte?** In der Regel haben Standard Morsekonus-Aufnahmehalter eine Schnitttiefenkapazität von 50 mm. Wenn **keine extra langen** Aufnahmehalter verwendet werden (wie auf Seite 522–523 Art. 20 1842, 20 1291, 20 1843, 20 1845, 20 1846), müssen bei Schnitttiefen über 50 mm 2-teilige Auswerferstifte verwendet werden.

* **Why use 2-part ejector pins?** Usually, standard morse taper holders have a cutting depth capacity of 50 mm. If **no extra-long** holders are used (e.g. as on page 522–523 Art. 20 1842, 20 1291, 20 1843, 20 1845, 20 1846), you need for drill depths above 50 mm 2-part ejector pins.

HSS-XE KERNBOHRER HSS-XE ANNULAR CUTTERS

SILVER-DRILL LINE

Karnasch SILVER-DRILL LINE Kernbohrer ist ein hervorragender Universalbohrer.

HSS-XE Spezialstahl + Stufenhärtung + bis zu 7 verschiedene Schneidgeometrien geeignet zum Bohren aller Baustähle bis 750 N.

Karnasch SILVER-DRILL LINE annular cutter is an excellent UNIVERSAL DRILL.

HSS-XE special steel + Step hardened + up to 7 different cutting geometries suitable for drilling of all mild steels up to a strength of 750 N.

EIGENSCHAFTEN · PROPERTIES

Gefertigt aus hochlegiertem HSS-XE Spezialstahl. Für extreme Härte an den Zahnspitzen (bis 68 HRC). Somit hohe Verschleißfestigkeit und Standzeit.

Made of high-alloyed HSS-XE special steel. For extreme hardness at the tip of the tooth (up to 68 HRC). A high wear resistance and lifetime.

Nur wenige Hersteller sind in der Lage in Stufen gehärtete Kernbohrer zu fertigen. Für uns ist dies „Standard“. Dadurch erreichen wir extrem harte Zahnspitzen (68 HRC) und dennoch einen flexiblen Kernbohrer.

Only few manufacturers are capable of producing step-hardened annular cutters. For Karnasch this is "standard". Only this makes us produce extremely hard tooth tips (68 HRC) and yet a flexible annular cutter.

Sieben verschiedene Schneidgeometrien optimiert je nach Durchmesser und Schnitttiefe des Kernbohrers, ergeben höchste Zerspanleistung.

Seven different cutting geometries optimally adapted to the different diameter and drill depths leads to high performance cutting results.

EIGENSCHAFTEN · PROPERTIES

HSS-XE Stahl Kernbohrer / Lochsägen Kombination in Leichtlauf Ausführung für handgeführte Maschinen, Kernbohrmaschinen, Stationäre Maschinen.

Das ideale Bohrwerkzeug für:

- Elektriker
- Sanitär- und Heizungsbauer
- Blechbearbeitung
- Wartungsinstallationen
- Automobil-Blecharbeiten und vieles mehr...

Durch dünne Schnittbreite von nur 2,8 mm:

- Sehr wenig Schnittdruck für lange Lebensdauer bei Arbeiten mit Akku-Bohrmaschinen.
- Schnelles und leichtgängiges Bohren aller Durchmesser
- Exzellente Führung und Kontrolle während des Bohrvorgangs.

Schnitttiefen:

Bis zu 8 mm möglich bei Stahl/Edelstahl. Bis zu 8 mm möglich bei NE-Metallen (Alu), Kunststoffen, Sandwich-Material.

Anwendungshinweis:

Verwenden Sie bei allen Metallen gutes Schneidöl (siehe ab Seite 1143)

HSS-XE steel annular cutter / hole saw combination for handeld machines, core drilling machines, stationary machines.

The ideal drilling tool for:

- Electrical
- Piping
- Conduit work
- Sheet metal fabrication
- Maintenance installation
- HVAC & PHCC
- Automotive aftermarket and many other industries.

Because of thin cutting width of only 2,8 mm:

- Very little cutting pressure for long battery life if using cordless drilling machines.
- Fast and smooth running drilling of all diameters.
- Excellent guidance and control during drilling.

Drill depths:

Up to 8 mm possible in steel/stainless steel. Up to 8 mm possible in non ferrous metal (Alu), plastics, sandwich material.

Application note:

Use only good cutting oil. For metal (see from page 1143)

FUNKTIONSWEISE · OPERATING MODE

- a. Das Werkstück ankören. Es ist wichtig mit dem Körner einen starken Körnerpunkt zu setzen (speziell bei Handmaschinen).
- b. Setzen Sie den Auswerferstift 1 genau in die Mitte des starken Körnerpunktes an. Zu Beginn des Bohrprozesses wenig Druck (Vorschub) verwenden, bis der Bohrer zirka 0,5 mm Schnitttiefe erreicht hat. Der Bohrer hat sich nun selbst zentriert. Der Vorschub kann erhöht werden.
- c. Eine Auswurfeder im Schaft 2 erzeugt Druck auf den Auswerferstift 1.
- d. Der Auswerferstift wirft den Kern 3 nach dem Durchbohren aus.

- a. Center punch the work piece. It is important to set a strong center mark (especially if using handheld machines).
- b. Place the ejector pin 1 exactly in the middle of the strong center mark. Use little pressure (feed-rate) until you reach approximately 0,5 mm cutting depth. The drill is self-centered now. You can increase feed rate.
- c. An ejection spring 2 which is installed in the shank puts pressure on the ejector pin 1.
- d. The ejector pin ejects the core 3 after drilling process.

PULVERSTAHL + DURABLUE-BESCHICHTETE SPIRALBOHRER POWDER STEEL + DURABLUE-COATED TWIST DRILLS

DRILL-LINE PRO

Im harten Einsatz kann nur in den seltensten Fällen auf optimale Drehzahlen und Kühlung Rücksicht genommen werden. Die Karnasch DURABLUE-Beschichtung macht den Kernbohrer somit entscheidend widerstandsfähiger. Letztendlich wird dadurch die Lebensdauer des Bohrers wesentlich erhöht.

DRILL-LINE PRO Spiralbohrer sind der Problemlöser für schwierigste Zerspanungsprobleme. Für weniger schwierige Zerspanung siehe Art. 20 1710 Seite 432, Art. 20 1840 Seite 433

Under hard field conditions only in the rarest cases optimum speed and cooling can be considered. The Karnasch DURABLUE-coating makes the annular cutter decisively more resistant. This results finally to an extraordinary increase of lifetime.

DRILL-LINE PRO twist drill are the right choice for most difficult materials. For less difficult materials see Art. 20 1710 page 432, Art. 20 1840 page 433

EIGENSCHAFTEN · PROPERTIES

Gefertigt aus ASP Pulverstahl zum Bohren auch schwierigster Materialien wie Eisenbahnschienen, Edelstähle, exotische Legierungen. Immer dort einsetzbar wo höchste Verschleißfestigkeit und Standzeit benötigt wird.

Made of ASP powder steel for drilling of difficult materials like railway tracks, stainless steels, exotic alloys. Applicable wherever a high wear resistance and lifetime are required.

Karnasch Spiralbohrer werden mit einer Hochleistungsgeometrie gefertigt für: Sofortiges Selbstzentrieren, leichteres Zerspanen, höchste Standzeiten.

Karnasch twist drills are produced in a heavy-duty geometry for immediate self-centering, easy cutting, highest lifetimes.

Unsere hochwertigsten Spiralbohrer erhalten die einzigartige und patentierte DURABLUE-Beschichtung. Extreme Oberflächenhärte- und -glätte ergeben extreme Standzeiten auch unter nicht optimalen Arbeitsbedingungen wie „Über Kopf arbeiten“, Trockenbohrungen, u.s.w.

Our first-class twist drills are equipped with the unique and patented DURABLUE-coating. Extreme surface hardness and sleekness yield extreme lifetimes even under non-optimum conditions like "overhead work", dry drilling, etc.

Gefertigt aus hochlegiertem HSS-XE Spezialstahl. Für extreme Härte an den Zahnsitzen (bis 68 HRC). Somit hohe Verschleißfestigkeit und Standzeit.

Karnasch Spiralbohrer werden mit einer Hochleistungsgeometrie gefertigt für: Sofortiges Selbstzentrieren, leichteres Zerspanen, höchste Standzeiten.

Made of high-alloyed HSS-XE special steel. For extreme hardness at the tip of the tooth (up to 68 HRC). Thus guaranteeing a high wear resistance and lifetime.

Karnasch twist drills are produced in a heavy-duty geometry for immediate self-centering, easy cutting, highest lifetimes.

HSS-XE Spiralbohrer mit Innenkühlung, Nutzlänge 30 mm, Weldonschaft

HSS-XE Spiralbohrer twist drill with internal cooling supply, drill depth 30 mm | 1", Weldon shank

HARTMETALL-BESTÜCKTE KERNBOHRER CARBIDE-TIPPED ANNULAR CUTTERS

HARD-LINE

Der beste Kernbohrer ist grundsätzlich Hartmetall-bestückt.

Nur diese Bohrer bieten das optimale Preis-Leistungs-Verhältnis für nahezu alle Materialien. Neben der höchsten Standzeit in allen Stählen bieten nur Hartmetall-bestückte Kernbohrer:

- Bohren in Stähle bis 40 Rockwell (HRC)
- Bohren in alle Edelstähle
- Bohren in schwierigste Legierungen (Hardox/Inconel/Titan)
- Bohren hervorragend auch in weiche Werkstoffe wie Alu, Kupfer, Messing u.ä.

Mit Durchmessern von 12-150 mm in Schnitttiefen von 40, 55, 80, 110 mm steht Ihnen weltweit das umfangreichste Lagerprogramm zur Verfügung.

The fact is: The best annular cutters are carbide tipped.

Only these drills offer the best value for money for almost all materials. Besides maximum cutting capacity in all kind of steels provide only carbide tipped annular cutters:

- Drilling in hardened steel up to 40 Rockwell (HRC)
- Drilling in all sorts of stainless steel
- Drilling in most difficult alloys (Hardox/Inconel/Titan)
- Drilling also excellent in all non-ferrous metals such as alu, copper, brass

Available in diameter 12-150 mm. Available in drill depths 40 mm, 55 mm, 80 mm and 110 mm. Simply the world's largest stock range of carbide tipped annular cutter.

EIGENSCHAFTEN · PROPERTIES

Karnasch Hartmetall-bestückte Kernbohrer (HARD-LINE) werden mit konischer Spirale gefertigt für: Sauberen Spanfluss und höchste Zerspanleistung auch bei schwierigen Materialien.

Karnasch carbide tipped annular cutters (HARD-LINE) are made with a conical helix for: clean chip flow and highest cutting ability even with difficult materials.

Karnasch Hartmetall-bestückte Kernbohrer (HARD-LINE) werden ausschließlich mit Sandvik Hartmetallzähnen bestückt. Wir meinen: Nur das beste Hartmetall ist gut genug für Karnasch Kernbohrer.

Karnasch carbide tipped annular cutters (HARD-LINE) are exclusively equipped with Sandvik carbide teeth. Our opinion is: Only the best carbide is good enough for Karnasch annular cutters.

Karnasch Hartmetall-bestückte Kernbohrer (HARD-LINE) sind in einer aufwendigen Vor-Mittel-Nachsneider-Geometrie gefertigt. Dies ergibt: ratterfreies, ruhiges und leichtes Zerspanen mit höchsten Standzeiten.

Karnasch carbide tipped annular cutters (HARD-LINE) are made in an elaborate pre-/intermediate-/after-cutting geometry. This results in: clatter-free, silent and easy cutting with highest lifetimes.

€ 22,10

2-teilig / 2 piece

Packnorm 2 Stk. · Packaging unit 2 pcs.

ANWENDUNG AUSWERFERSTIFTE 2-TEILIG APPLICATION EJECTOR PINS 2-PIECE

Anwendung:
Teil 1 in den Schaft des Kernbohrers einführen. Teil 2 auf Teil 1 schieben. Bohren Sie bis ca. 50 mm Schnitttiefe. Danach Teil 2 entfernen und weiter bohren.

Application:
Insert piece 1 into the annular cutter shank. Push piece 2 onto part 1. Drill as deep as 50 mm cutting depth. Then remove piece 2 and continue drilling.

* **Warum 2-teilige Auswerferstifte?** In der Regel haben Standard Morsekonus-Aufnahmehalter eine Schnitttiefenkapazität von 50 mm. Wenn **keine extra langen** Aufnahmehalter verwendet werden (wie auf Seite 522–523 Art. 20 1842, 20 1291, 20 1843, 20 1845, 20 1846), müssen bei Schnitttiefen über 50 mm 2-teilige Auswerferstifte verwendet werden.

* **Why use 2-part ejector pins?** Usually, standard morse taper holders have a cutting depth capacity of 50 mm. If **no extra-long** holders are used (e.g. as on page 522–523 Art. 20 1842, 20 1291, 20 1843, 20 1845, 20 1846), you need for drill depths above 50 mm 2-part ejector pins.

**ANWENDUNG AUSWERFERSTIFTE 2-TEILIG
APPLICATION EJECTOR PINS 2-PIECE**

Anwendung:
Teil 1 in den Schaft des Kernbohrers einführen. Teil 2 auf Teil 1 schieben. Bohren Sie bis ca. 50 mm Schnitttiefe. Danach Teil 2 entfernen und weiter bohren.

Application:
Insert piece 1 into the annular cutter shank. Push piece 2 onto part 1. Drill as deep as 50 mm cutting depth. Then remove piece 2 and continue drilling.

* **Warum 2-teilige Auswerferstifte?** In der Regel haben Standard Morsekonus-Aufnahmehalter eine Schnitttiefenkapazität von 50 mm. Wenn **keine extra langen** Aufnahmehalter verwendet werden (wie auf Seite 522-523 Art. 20 1842, 20 1291, 20 1843, 20 1845, 20 1846), müssen bei Schnitttiefen über 50 mm 2-teilige Auswerferstifte verwendet werden.

* **Why use 2-part ejector pins?** Usually, standard morse taper holders have a cutting depth capacity of 50 mm. If **no extra-long** holders are used (e.g. as on page 522-523 Art. 20 1842, 20 1291, 20 1843, 20 1845, 20 1846), you need for drill depths above 50 mm 2-part ejector pins.

ZUBEHÖR · ACCESSORIES

AUSWERFERSTIFTE 1-TEILIG · EJECTOR PINS 1-PIECE

20 1439
€ 13,05

1-teilig / 1 piece

Packnorm 2 Stk. · Packaging unit 2 pcs.

Zusammen mit Aufnahmehalter 20 1842, 20 1291, 20 1843, 20 1845, 20 1846 (siehe Seite 522–523) kann dieser einteilige Auswerferstift verwendet werden. Es kann ohne Umstecken bis 110 mm Schnitttiefe in einem Arbeitsgang gebohrt werden. Robust und einfach.

It is possible to use this one-piece ejector pin in combination with tool holder article 20 1842, 20 1291, 20 1843, 20 1845, 20 1846 (see page 522–523). You can drill as deep as 110 mm in one working process without changing. Robust and easy.

AUSWERFERSTIFTE 2-TEILIG EJECTOR PINS 2-PIECE

20 1427
€ 22,10

2-teilig / 2 piece

Packnorm 2 Stk. · Packaging unit 2 pcs.

ANWENDUNG AUSWERFERSTIFTE 2-TEILIG APPLICATION EJECTOR PINS 2-PIECE

Anwendung:

Teil 1 in den Schaft des Kernbohrers einführen. Teil 2 auf Teil 1 schieben. Bohren Sie bis ca. 50 mm Schnitttiefe. Danach Teil 2 entfernen und weiter bohren.

Application:

Insert piece 1 into the annular cutter shank. Push piece 2 onto part 1. Drill as deep as 50 mm cutting depth. Then remove piece 2 and continue drilling.

• **Warum 2-teilige Auswerferstifte?** In der Regel haben Standard Morsekonus-Aufnahmehalter eine Schnitttiefenkapazität von 50 mm. Wenn **keine extra langen** Aufnahmehalter verwendet werden (wie auf Seite 522–523 Art. 20 1842, 20 1291, 20 1843, 20 1845, 20 1846), müssen bei Schnitttiefen über 50 mm 2-teilige Auswerferstifte verwendet werden.

• **Why use 2-part ejector pins?** Usually, standard morse taper holders have a cutting depth capacity of 50 mm. If **no extra-long** holders are used (e.g. as on page 522–523 Art. 20 1842, 20 1291, 20 1843, 20 1845, 20 1846), you need for drill depths above 50 mm 2-part ejector pins.

HSS-XE + DURABLUE BESCHICHTETE KERNBOHRER

HSS-XE + DURABLUE-COATED ANNULAR CUTTERS

BLUE-DRILL LINE

Neben Hartmetall-bestückten Kernbohrern bieten beschichtete HSS-XE Kernbohrer das optimale Preis-Leistungs-Verhältnis.

Im harten Einsatz kann nur in den seltensten Fällen auf optimale Drehzahlen und Kühlung Rücksicht genommen werden. Die Karnasch DURABLUE-Beschichtung macht den Kernbohrer somit entscheidend widerstandsfähiger. Letztendlich wird dadurch die Lebensdauer des Bohrers wesentlich erhöht.

BLUE-DRILL LINE ist der am häufigsten verwendete Karnasch Kernbohrer. Der HSS-XE Bohrer mit dem besten Preis-Leistungs-Verhältnis für alle Stähle bis 1100 N Festigkeit sowie Edelstähle.

Besides carbide tipped annular cutters provide coated HSS-XE cutters the optimal price-performance ratio.

Under hard field conditions only in the rarest cases optimum speed and cooling can be considered. The Karnasch DURABLUE-coating makes the annular cutter decisively more resistant. This results finally to an extraordinary increase of lifetime.

BLUE-DRILL LINE annular cutters are the most commonly used Karnasch cutters. These HSS-XE cutters offers the best price-performance ratio for all steels up to a strength of 1100 N and stainless steel.

EIGENSCHAFTEN · PROPERTIES

Gefertigt aus hochlegiertem HSS-XE Spezialstahl. Für extreme Härte an den Zahnsitzen (bis 68 HRC). Somit hohe Verschleißfestigkeit und Standzeit.

Made of high-alloyed HSS-XE special steel. For extreme hardness at the tip of the tooth (up to 68 HRC). A high wear resistance and lifetime.

Unsere hochwertigsten Kernbohrer erhalten die einzigartige und patentierte DURABLUE-Beschichtung. Extreme Oberflächenhärte- und -glätte ergeben extreme Standzeiten auch unter nicht optimalen Arbeitsbedingungen wie „Über Kopf arbeiten“, Trockenbohrungen, u.s.w.

Our first-class annular cutters are equipped with the unique and patented DURABLUE-coating. Extreme surface hardness and sleekness yield extreme lifetimes even under non-optimum conditions like "overhead work", dry drilling, etc.

Nur wenige Hersteller sind in der Lage in Stufen gehärtete Kernbohrer zu fertigen. Für uns ist dies „Standard“. Dadurch erreichen wir extrem harte Zahnsitzen (68 HRC) und dennoch einen flexiblen Kernbohrer.

Only few manufacturers are capable of producing step-hardened annular cutters. For us this is "standard". Only this makes us produce extremely hard tooth tips (68 HRC) and yet a flexible annular cutter.

Aus dem vollen Material komplett geschliffen. Dieser Feinschliff erhöht die Zerspanleistung bei gleichzeitiger Reduzierung der Reibung. Für ein Mehr an Standzeit.

Completely made "FULLY GROUND". This refining rises the cutting ability with reducing friction at the same time. For an exceeded lifetime.

ZUBEHÖR · ACCESSORIES

AUSWERFERSTIFTE 1-TEILIG · EJECTOR PINS 1-PIECE

☒ 20 1439
• € 13,05

Zusammen mit Aufnahmehalter 20 1842, 20 1291, 20 1843, 20 1845, 20 1846 (siehe Seite 522–523) kann dieser einteilige Auswerferstift verwendet werden. Es kann ohne Umstecken bis 110 mm Schnitttiefe in einem Arbeitsgang gebohrt werden. Robust und einfach.

It is possible to use this one-piece ejector pin in combination with tool holder article 20 1842, 20 1291, 20 1843, 20 1845, 20 1846 (see page 522–523). You can drill as deep as 110 mm in one working process without changing. Robust and easy.

Packnorm 2 Stk. · Packaging unit 2 pcs.

AUSWERFERSTIFTE 2-TEILIG · EJECTOR PINS 2-PIECE

☒ 20 1427
• € 22,10

ANWENDUNG AUSWERFERSTIFTE 2-TEILIG · APPLICATION EJECTOR PINS 2-PIECE

Anwendung:

Teil 1 in den Schaft des Kernbohrers einführen. Teil 2 auf Teil 1 schieben. Bohren Sie bis ca. 50 mm Schnitttiefe. Danach Teil 2 entfernen und weiter bohren.

Application:

Insert piece 1 into the annular cutter shank. Push piece 2 onto part 1. Drill as deep as 50 mm cutting depth. Then remove piece 2 and continue drilling.

Packnorm 2 Stk. · Packaging unit 2 pcs.

☒ **Warum 2-teilige Auswerferstifte?** In der Regel haben Standard Morsekonus-Aufnahmehalter eine Schnitttiefenkapazität von 50 mm. Wenn **keine extra langen** Aufnahmehalter verwendet werden (wie auf Seite 522–523 Art. 20 1842, 20 1291, 20 1843, 20 1845, 20 1846), müssen bei Schnitttiefen über 50 mm 2-teilige Auswerferstifte verwendet werden.

☒ **Why use 2-part ejector pins?** Usually, standard morse taper holders have a cutting depth capacity of 50 mm. If **no extra-long** holders are used (e.g. as on page 522–523 Art. 20 1842, 20 1291, 20 1843, 20 1845, 20 1846), you need for drill depths above 50 mm 2-part ejector pins.

☞ **Warum 2-teilige Auswerferstifte?** In der Regel haben Standard Morsekonus-Aufnahmehalter eine Schnitttiefenkapazität von 50 mm. Wenn **keine extra langen** Aufnahmehalter verwendet werden (wie auf Seite 522–523 Art. 20 1842, 20 1291, 20 1843, 20 1845, 20 1846), müssen bei Schnitttiefen über 50 mm 2-teilige Auswerferstifte verwendet werden.

☞ **Why use 2-part ejector pins?** Usually, standard morse taper holders have a cutting depth capacity of 50 mm. If **no extra-long** holders are used (e.g. as on page 522–523 Art. 20 1842, 20 1291, 20 1843, 20 1845, 20 1846), you need for drill depths above 50 mm 2-part ejector pins.

AUSWERFERSTIFTE 1-TEILIG · EJECTOR PINS 1-PIECE

☞ **20 1439**
€ 13,05

1-teilig / 1 piece

Packnorm 2 Stk. · Packaging unit 2 pcs.

Zusammen mit Aufnahmehalter 20 1842, 20 1291, 20 1843, 20 1845, 20 1846 (siehe Seite 522–523) kann dieser einteilige Auswerferstift verwendet werden. Es kann ohne Umstecken bis 110 mm Schnitttiefe in einem Arbeitsgang gebohrt werden. Robust und einfach.

It is possible to use this one-piece ejector pin in combination with tool holder article 20 1842, 20 1291, 20 1843, 20 1845, 20 1846 (see page 522–523). You can drill as deep as 110 mm in one working process without changing. Robust and easy.

AUSWERFERSTIFTE 2-TEILIG EJECTOR PINS 2-PIECE

☞ **20 1427**
€ 22,10

2-teilig / 2 piece

Packnorm 2 Stk. · Packaging unit 2 pcs.

ANWENDUNG AUSWERFERSTIFTE 2-TEILIG APPLICATION EJECTOR PINS 2-PIECE

Anwendung:

Teil 1 in den Schaft des Kernbohrers einführen. Teil 2 auf Teil 1 schieben. Bohren Sie bis ca. 50 mm Schnitttiefe. Danach Teil 2 entfernen und weiter bohren.

Application:

Insert piece 1 into the annular cutter shank. Push piece 2 onto part 1. Drill as deep as 50 mm cutting depth. Then remove piece 2 and continue drilling.

☞ **Warum 2-teilige Auswerferstifte?** In der Regel haben Standard Morsekonus-Aufnahmehalter eine Schnitttiefenkapazität von 50 mm. Wenn **keine extra langen** Aufnahmehalter verwendet werden (wie auf Seite 522–523 Art. 20 1842, 20 1291, 20 1843, 20 1845, 20 1846), müssen bei Schnitttiefen über 50 mm 2-teilige Auswerferstifte verwendet werden.

☞ **Why use 2-part ejector pins?** Usually, standard morse taper holders have a cutting depth capacity of 50 mm. If **no extra-long** holders are used (e.g. as on page 522–523 Art. 20 1842, 20 1291, 20 1843, 20 1845, 20 1846), you need for drill depths above 50 mm 2-part ejector pins.

HSS-XE KERNBOHRER

HSS-XE ANNULAR CUTTERS

GOLD-DRILL LINE

Karnasch GOLD-DRILL LINE Kernbohrer sind die am meisten verwendeten nicht beschichteten HSS-XE Kernbohrer.

Durch spezial GOLD-TECH Oberflächenbehandlung + Vollschliff + HSS-XE Spezialstahl hervorragend zum Bohren in Stähle bis 900 N und sogar geeignet für Edelstähle.

Karnasch GOLD-DRILL LINE annular cutters are the most commonly used non-coated HSS-XE annular cutter.

By special surface treatment GOLD-TECH + FULLY GROUND + special steel HSS-XE ideal for drilling in steel up to a strength of 900 N and even suitable for stainless steels.

EIGENSCHAFTEN · PROPERTIES

Gefertigt aus hochlegiertem HSS-XE Spezialstahl. Für extreme Härte an den Zahnschneiden (bis 68 HRC). Somit hohe Verschleißfestigkeit und Standzeit.

Made of high-alloyed HSS-XE special steel. For extreme hardness at the tip of the tooth (up to 68 HRC). A high wear resistance and lifetime.

Gold-Tech Oberflächenbehandlung. Die Spezialbehandlung für höhere Standzeiten

Gold-Tech surface treatment. The special treatment for higher lifetimes.

Nur wenige Hersteller sind in der Lage in Stufen gehärtete Kernbohrer zu fertigen. Für uns ist dies „Standard“. Dadurch erreichen wir extrem harte Zahnschneiden (68 HRC) und dennoch einen flexiblen Kernbohrer.

Only few manufacturers are capable of producing step-hardened annular cutters. For Karnasch this is "standard". Only this makes us produce extremely hard tooth tips (68 HRC) and yet a flexible annular cutter.

Aus dem vollen Material komplett geschliffen. Dieser Feinschliff erhöht die Zerspanleistung bei gleichzeitiger Reduzierung der Reibung. Für ein Mehr an Standzeit.

Completely made "FULLY GROUND". This refining rises the cutting ability with reducing friction at the same time. For an exceeded lifetime.

EJECTOR PINS 2-PIECE

20 1427
€ 22,10

ANWENDUNG AUSWERFERSTIFTE 2-TEILIG
APPLICATION EJECTOR PINS 2-PIECE

Anwendung:
Teil 1 in den Schaft des Kernbohrers einführen. Teil 2 auf Teil 1 schieben. Bohren Sie bis ca. 50 mm Schnitttiefe. Danach Teil 2 entfernen und weiter bohren.

Application:
Insert piece 1 into the annular cutter shank. Push piece 2 onto part 1. Drill as deep as 50 mm cutting depth. Then remove piece 2 and continue drilling.

Packnorm 2 Stk. · Packaging unit 2 pcs.

- ☛ Warum 2-teilige Auswerferstifte? In der Regel haben Standard Morsekonus-Aufnahmehalter eine Schnitttiefenkapazität von 50 mm. Wenn keine extra langen Aufnahmehalter verwendet werden (wie auf Seite 522–523 Art. 20 1842, 20 1291, 20 1843, 20 1845, 20 1846), müssen bei Schnitttiefen über 50 mm 2-teilige Auswerferstifte verwendet werden.
- ☛ Why use 2-part ejector pins? Usually, standard morse taper holders have a cutting depth capacity of 50 mm. If no extra-long holders are used (e.g. as on page 522–523 Art. 20 1842, 20 1291, 20 1843, 20 1845, 20 1846), you need for drill depths above 50 mm 2-part ejector pins.

AUSWERFERSTIFTE 1-TEILIG · EJECTOR PINS 1-PIECE

20 1439
€ 13,05

1-teilig / 1 piece

Packnorm 2 Stk. · Packaging unit 2 pcs.

Zusammen mit Aufnahmehalter 20 1842, 20 1291, 20 1843, 20 1845, 20 1846 (siehe Seite 522–523) kann dieser einteilige Auswerferstift verwendet werden. Es kann ohne Umstecken bis 110 mm Schnitttiefe in einem Arbeitsgang gebohrt werden. Robust und einfach.

It is possible to use this one-piece ejector pin in combination with tool holder article 20 1842, 20 1291, 20 1843, 20 1845, 20 1846 (see page 522–523). You can drill as deep as 110 mm in one working process without changing. Robust and easy.

AUSWERFERSTIFTE 2-TEILIG
EJECTOR PINS 2-PIECE

20 1427
€ 22,10

2-teilig / 2 piece

Packnorm 2 Stk. · Packaging unit 2 pcs.

ANWENDUNG AUSWERFERSTIFTE 2-TEILIG
APPLICATION EJECTOR PINS 2-PIECE

Anwendung:

Teil 1 in den Schaft des Kernbohrers einführen. Teil 2 auf Teil 1 schieben. Bohren Sie bis ca. 50 mm Schnitttiefe. Danach Teil 2 entfernen und weiter bohren.

Application:

Insert piece 1 into the annular cutter shank. Push piece 2 onto part 1. Drill as deep as 50 mm cutting depth. Then remove piece 2 and continue drilling.

* **Warum 2-teilige Auswerferstifte?** In der Regel haben Standard Morsekonus-Aufnahmehalter eine Schnitttiefenkapazität von 50 mm. Wenn **keine extra langen** Aufnahmehalter verwendet werden (wie auf Seite 522–523 Art. 20 1842, 20 1291, 20 1843, 20 1845, 20 1846), müssen bei Schnitttiefen über 50 mm 2-teilige Auswerferstifte verwendet werden.

* **Why use 2-part ejector pins?** Usually, standard morse taper holders have a cutting depth capacity of 50 mm. If **no extra-long** holders are used (e.g. as on page 522–523 Art. 20 1842, 20 1291, 20 1843, 20 1845, 20 1846), you need for drill depths above 50 mm 2-part ejector pins.

HARTMETALL-BESTÜCKTE KERNBOHRER CARBIDE-TIPPED ANNULAR CUTTERS

HARD-LINE

Der beste Kernbohrer ist grundsätzlich Hartmetall-bestückt.

Nur diese Bohrer bieten das optimale Preis-Leistungs-Verhältnis für nahezu alle Materialien. Neben der höchsten Standzeit in allen Stählen bieten nur Hartmetall-bestückte Kernbohrer:

- Bohren in Stähle bis 40 Rockwell (HRC)
- Bohren in alle Edelstähle
- Bohren in schwierigste Legierungen (Hardox/Inconel/Titan)
- Bohren hervorragend auch in weiche Werkstoffe wie Alu, Kupfer, Messing u.ä.

Mit Durchmessern von 12-150 mm in Schnitttiefen von 40, 55, 80, 110 mm steht Ihnen weltweit das umfangreichste Lagerprogramm zur Verfügung.

The fact is: The best annular cutters are carbide tipped.

Only these drills offer the best value for money for almost all materials. Besides maximum cutting capacity in all kind of steels provide only carbide tipped annular cutters:

- Drilling in hardened steel up to 40 Rockwell (HRC)
- Drilling in all sorts of stainless steel
- Drilling in most difficult alloys (Hardox/Inconel/Titan)
- Drilling also excellent in all non-ferrous metals such as alu, copper, brass

Available in diameter 12-150 mm. Available in drill depths 40 mm, 55 mm, 80 mm and 110 mm. Simply the world's largest stock range of carbide tipped annular cutter.

EIGENSCHAFTEN · PROPERTIES

Karnasch Hartmetall-bestückte Kernbohrer (HARD-LINE) werden mit konischer Spirale gefertigt für: Sauberen Spanfluss und höchste Zerspanleistung auch bei schwierigen Materialien.

Karnasch carbide tipped annular cutters (HARD-LINE) are made with a conical helix for: clean chip flow and highest cutting ability even with difficult materials.

Karnasch Hartmetall-bestückte Kernbohrer (HARD-LINE) werden ausschließlich mit Sandvik Hartmetallzähnen bestückt. Wir meinen: Nur das beste Hartmetall ist gut genug für Karnasch Kernbohrer.

Karnasch carbide tipped annular cutters (HARD-LINE) are exclusively equipped with Sandvik carbide teeth. Our opinion is: Only the best carbide is good enough for Karnasch annular cutters.

Karnasch Hartmetall-bestückte Kernbohrer (HARD-LINE) sind in einer aufwendigen Vor-Mittel-Nachsneider-Geometrie gefertigt. Dies ergibt: ratterfreies, ruhiges und leichtes Zerspanen mit höchsten Standzeiten.

Karnasch carbide tipped annular cutters (HARD-LINE) are made in an elaborate pre-/intermediate-/after-cutting geometry. This results in: clatter-free, silent and easy cutting with highest lifetimes.

HINWEISE · NOTES

Sie benötigen größere Schnittiefen wie z. B. 80 mm oder 110 mm?

Arbeiten Sie mit Fein Adapter + Weldon Kernbohrer.
Siehe Art. 20 1650 (Schnittiefe 80 mm) Seite 370
Siehe Art. 20 1660 (Schnittiefe 110 mm) Seite 372

You need larger drill depths such as 80 mm or 110 mm?

Work with adapter Fein + Weldon annular cutters.
See Art. 20 1650 (cutting depth 80 mm) page 370
See Art. 20 1660 (cutting depth 110 mm) page 372

Packnorm 2 Stk.
Packaging unit 2 pcs.

Sie benötigen größere Durchmesser bis 100 mm?

Arbeiten Sie mit Fein Quick-In und Fein Quick-In Max Adaptern + Power-Max Lochsagen siehe Seite 564

You need larger diameter up to 100 mm?

Work with adapter Fein Quick-In or Fein Quick-In Max + our Power-Max hole saws see page 564

FEIN QUICK-IN 18 mm

HSS-XE + DURABLU E BESCHICHTETE KERNBOHRER

HSS-XE + DURABLU E-COATED ANNULAR CUTTERS

BLUE-DRILL LINE

Neben Hartmetall-bestückten Kernbohrern bieten beschichtete HSS-XE Kernbohrer das optimale Preis-Leistungs-Verhältnis.

Im harten Einsatz kann nur in den seltensten Fällen auf optimale Drehzahlen und Kühlung Rücksicht genommen werden. Die Karnasch DURABLU E-Beschichtung macht den Kernbohrer „Fehlerresistent“.

BLUE-DRILL LINE ist der am häufigsten verwendete Karnasch Kernbohrer. Der HSS-XE Bohrer mit dem besten Preis-Leistungs-Verhältnis für alle Stähle bis 1100 N Festigkeit sowie Edelstähle.

Besides carbide tipped annular cutters provide coated HSS-XE cutters the optimal price-performance ratio.

Under hard field conditions only in the rarest cases optimum speed and cooling can be considered. The Karnasch DURABLU E-coating makes the annular cutter "error-resistant".

BLUE-DRILL LINE annular cutters are the most commonly used Karnasch cutters. This HSS-XE cutter is offering the best price-performance ratio for all steels up to a strength of 1100 N and stainless steel.

EIGENSCHAFTEN · PROPERTIES

Gefertigt aus hochlegiertem HSS-XE Spezialstahl. Für extreme Härte an den Zahnsitzen (bis 68 HRC). Somit hohe Verschleißfestigkeit und Standzeit.

Made of high-alloyed HSS-XE special steel. For extreme hardness at the tip of the tooth (up to 68 HRC). A high wear resistance and lifetime.

Unsere hochwertigsten Kernbohrer erhalten die einzigartige und patentierte DURABLU E-Beschichtung. Extreme Oberflächenhärte- und -glätte ergeben extreme Standzeiten auch unter nicht optimalen Arbeitsbedingungen wie „Über Kopf arbeiten“, Trockenbohrungen, u.s.w.

Our first-class annular cutters are equipped with the unique and patented DURABLU E-coating. Extreme surface hardness and sleekness yield extreme lifetimes even under non-optimum conditions like "overhead work", dry drilling, etc.

Nur wenige Hersteller sind in der Lage in Stufen gehärtete Kernbohrer zu fertigen. Für uns ist dies „Standard“. Dadurch erreichen wir extrem harte Zahnsitzen (68 HRC) und dennoch einen flexiblen Kernbohrer.

Only few manufacturers are capable of producing step-hardened annular cutters. For us this is "standard". Only this makes us produce extremely hard tooth tips (68 HRC) and yet a flexible annular cutter.

Aus dem vollen Material komplett geschliffen. Dieser Feinschliff erhöht die Zerspanleistung bei gleichzeitiger Reduzierung der Reibung. Für ein Mehr an Standzeit.

Completely made "FULLY GROUND". This refining rises the cutting ability with reducing friction at the same time. For an exceeded lifetime.

RAIL-LINE 30

Hartmetall-bestückter Kernbohrer, Weldonschaft, Nutzlänge 30 mm
Carbide-tipped annular cutter, Weldon shank, drill depth 30 mm | 1"

ANWENDUNG · APPLICATION

Für alle Schienentypen bis 1100 N (UIC 60).
Mehr als 100 Bohrungen in UIC 60 Schienen möglich.

Schienen

For all rail types up to 1100 N (UIC 60).

Rails

More than 100 holes in UIC 60 rails possible.

EIGENSCHAFTEN · PROPERTIES

Karnasch Hartmetall-bestückte Kernbohrer (HARD-LINE) werden mit konischer Spirale gefertigt für: Sauberen Spanfluss und höchste Zerspanleistung auch bei schwierigen Materialien.

Karnasch carbide tipped annular cutters (HARD-LINE) are made with a conical helix for: clean chip flow and highest cutting ability even with difficult materials.

Karnasch Hartmetall-bestückte Kernbohrer (HARD-LINE) werden ausschließlich mit Sandvik Hartmetallzähnen bestückt. Wir meinen: Nur das beste Hartmetall ist gut genug für Karnasch Kernbohrer.

Karnasch carbide tipped annular cutters (HARD-LINE) are exclusively equipped with Sandvik carbide teeth. Our opinion is: Only the best carbide is good enough for Karnasch annular cutters.

Karnasch Hartmetall-bestückte Kernbohrer (HARD-LINE) sind in einer aufwendigen Vor-Mittel-Nachsneider-Geometrie gefertigt. Dies ergibt: ratterfreies, ruhiges und leichtes Zerspanen mit höchsten Standzeiten. **Die Schnittwinkel sind zum Bohren von Schienen optimiert.**

Karnasch carbide tipped annular cutters (HARD-LINE) are made in an elaborate pre-/intermediate-/after-cutting geometry. This results in: clatter-free, silent and easy cutting with highest lifetimes. **The cutting angles are optimized for drilling in rails.**

Packnorm 2 Stk. · Packaging unit 2 pcs.

EIGENSCHAFTEN · PROPERTIES

Gefertigt aus ASP Pulverstahl zum Bohren auch schwierigster Materialien wie Eisenbahnschienen, Edelstähle, exotische Legierungen. Immer dort einsetzbar wo höchste Verschleißfestigkeit und Standzeit benötigt wird.

Made of ASP powder steel for drilling of difficult materials like railway tracks, stainless steels, exotic alloys. Applicable wherever a high wear resistance and lifetime are required.

Nur wenige Hersteller sind in der Lage in Stufen gehärtete Kernbohrer zu fertigen. Für uns ist dies „Standard“. Dadurch erreichen wir extrem harte Zahnspitzen (68 HRC) und dennoch einen flexiblen Kernbohrer.

Only few manufacturers are capable of producing step-hardened annular cutters. For Karnasch this is "standard". Only this makes us produce extremely hard tooth tips (68 HRC) and yet a flexible annular cutter.

Sieben verschiedene Schneidgeometrien je nach Durchmesser und Schnitttiefe des Kernbohrers optimiert ergeben höchste Zerspanleistung.

Seven different cutting geometries optimally adapted to the different diameter and drill depths leads to high performance cutting results.

Unsere hochwertigsten Kernbohrer erhalten die einzigartige und patentierte DURABLU-Beschichtung. Extreme Oberflächenhärte- und -glätte ergeben extreme Standzeiten auch unter nicht optimalen Arbeitsbedingungen wie „Über Kopf arbeiten“, Trockenbohrungen, u.s.w.

Our first-class annular cutters are equipped with the unique and patented DURABLU-coating. Extreme surface hardness and sleekness yield extreme lifetimes even under non-optimum circumstances like "overhead work", dry drilling, etc.

Aus dem vollen Material komplett geschliffen. Dieser Feinschliff erhöht die Zerspanleistung bei gleichzeitiger Reduzierung der Reibung. Für ein Mehr an Standzeit.

Completely made "FULLY GROUND". This refining rises the cutting ability with reducing friction at the same time. For an exceeded lifetime.

€ 7,65

Packnorm 2 Stk. · Packaging unit 2 pcs.

EIGENSCHAFTEN · PROPERTIES

Gefertigt aus ASP Pulverstahl zum Bohren auch schwierigster Materialien wie Eisenbahnschienen, Edelstähle, exotische Legierungen. Immer dort einsetzbar wo höchste Verschleißfestigkeit und Standzeit benötigt wird.

Made of ASP powder steel for drilling of difficult materials like railway tracks, stainless steels, exotic alloys. Applicable wherever a high wear resistance and lifetime are required.

Nur wenige Hersteller sind in der Lage in Stufen gehärtete Kernbohrer zu fertigen. Für uns ist dies „Standard“. Dadurch erreichen wir extrem harte Zahnspitzen (68 HRC) und dennoch einen flexiblen Kernbohrer.

Only few manufacturers are capable of producing step-hardened annular cutters. For Karnasch this is "standard". Only this makes us produce extremely hard tooth tips (68 HRC) and yet a flexible annular cutter.

Sieben verschiedene Schneidgeometrien je nach Durchmesser und Schnitttiefe des Kernbohrers optimiert ergeben höchste Zerspanleistung.

Seven different cutting geometries optimally adapted to the different diameter and drill depths leads to high performance cutting results.

Unsere hochwertigsten Kernbohrer erhalten die einzigartige und patentierte DURABLU-Beschichtung. Extreme Oberflächenhärte- und -glätte ergeben extreme Standzeiten auch unter nicht optimalen Arbeitsbedingungen wie „Über Kopf arbeiten“, Trockenbohrungen, u.s.w.

Our first-class annular cutters are equipped with the unique and patented DURABLU-coating. Extreme surface hardness and sleekness yield extreme lifetimes even under non-optimum circumstances like "overhead work", dry drilling, etc.

Aus dem vollen Material komplett geschliffen. Dieser Feinschliff erhöht die Zerspanleistung bei gleichzeitiger Reduzierung der Reibung. Für ein Mehr an Standzeit.

Completely made "FULLY GROUND". This refining rises the cutting ability with reducing friction at the same time. For an exceeded lifetime.

Pulverstahl + DURABLU-beschichteter Spiralbohrer mit Innenkühlung, Nutzlänge 50 mm, Weldonschaft
 Powder steel + DURABLU-coated twist drill with internal cooling supply, drill depth 50 mm | 2", Weldon shank

DRILL-LINE **RAIL** **50** **PRO** **20 1465**

ANWENDUNG · APPLICATION

Für alle Schienentypen bis 1100 N (UIC 60).
 Mehr als 100 Bohrungen in UIC 60 Schienen möglich.

Schienen
 Rails

For all rail types up to 1100 N (UIC 60).
 More than 100 holes in UIC 60 rails possible.

Mit Innenkühlung
 With internal cooling supply

Wird ohne Bolzen zum Öffnen der Kühlmittelzufuhr geliefert (wenn benötigt siehe Zubehör).
 Will be delivered without pin for opening the cooling supply (see accessories if required).

Gefertigt aus ASP Pulverstahl zum Bohren auch schwierigster Materialien wie Eisenbahnschienen, Edelstähle, exotische Legierungen. Immer dort einsetzbar wo höchste Verschleißfestigkeit und Standzeit benötigt wird.

Made of ASP powder steel for drilling of difficult materials like railway tracks, stainless steels, exotic alloys. Applicable wherever a high wear resistance and lifetime are required.

Karnasch Spiralbohrer werden mit einer Hochleistungsgeometrie gefertigt für: Sofortiges Selbstzentrieren, leichteres Zerspanen, höchste Standzeiten.

Karnasch twist drills are produced in a heavy-duty geometry for immediate self-centering, easy cutting, highest lifetimes.

Unsere hochwertigsten Spiralbohrer erhalten die einzigartige und patentierte DURABLU-Beschichtung. Extreme Oberflächenhärte- und -glätte ergeben extreme Standzeiten auch unter nicht optimalen Arbeitsbedingungen wie „Über Kopf arbeiten“, Trockenbohrungen, u.s.w.

Our first-class twist drills are equipped with the unique and patented DURABLU-coating. Extreme surface hardness and sleekness yield extreme lifetimes even under non-optimum conditions like "overhead work", dry drilling, etc.

Sekundenschneller Kernbohrwechsel ohne Werkzeug. Passend für alle Kernbohrer mit Weldon + Nitto / Universalschaft 19 mm (3/4").

- Für alle HSS-XE-Kernbohrer bis max. Ø 60 mm sowie max. Schnitttiefe 55 mm
- Für alle HM-Kernbohrer bis max. Ø 50 mm sowie max. Schnitttiefe 55 mm

Alle Schnellwechsel Aufnahmen sind komplett verchromt und somit Schmutz- und Rostbeständig. Selbstverständlich kommen alle Aufnahmen, mit Innenkühlung, mit dem bewährten Schnellwechsel-Kühlmittelschlauchsystem.

Verwenden Sie Karnasch **QUICK-CHANGE** -Halter nur mit Original Karnasch Kernbohrern. Die einwandfreie Funktion des Karnasch **QUICK-CHANGE** -Halters mit anderen Fabrikaten können wir nicht garantieren.

Changing annular cutters in a matter of seconds without tools. Suitable for all annular cutters with Weldon shank / Universal + Weldon shank 19 mm (3/4").

- All HSS-XE annular cutters up to a diameter of 60 mm. Cutting depth 55 mm.
- All carbide tipped annular cutters up to a diameter of 50 mm. Cutting depth 55 mm.

All Quick-Change holders are fully chromed and thus dirt and rust resistant. Additionally comes all Quick-Change holders, with internal cooling, with the proven Quick-change coolant hose system.

Use Karnasch **QUICK-CHANGE** holders only with original Karnasch annular cutters. We cannot guarantee a faultless operation of the Karnasch **QUICK-CHANGE** holder in combination with other products.

EIGENSCHAFTEN · PROPERTIES

HSS-XE Stahl

20 1295

Gefertigt aus hochlegierten Spezialstahl "XE" für wesentlich höhere Standzeiten gegenüber HSS-Stähle.

Ideal zum Senken in:

- Stahl
- Guss
- Bunt- und Leichtmetalle

HSS-XE Stahl + BLUE-TEC beschichtet

20 1195

Gefertigt aus hochlegierten Spezialstahl "XE" für wesentlich höhere Standzeit gegenüber HSS-Stähle. BLUE-TEC Beschichtung für eine nochmalige wesentliche Erhöhung der Standzeit auch bei Trockenbearbeitung (ohne/wenig Kühlung).

Zum Senken in:

- Edelmstähle (V2A / V4A)
- Stahl
- Guss
- Bunt- und Leichtmetalle

HSS-XE steel

Made of high-alloyed special steel „XE“ for considerably longer service life than HSS-steel.

Excellent for countersinking in:

- Steel
- Cast iron
- Non ferrous metals

HSS-XE steel + BLUE-TEC coated

Made of high-alloyed special steel „XE“ for considerably longer service life than HSS-steel. BLUE-TEC coating for a further substantial increase in service life also when machining dry (no/little cooling).

Excellent for countersinking in:

- High-alloyed chromium steel such as stainless (V2A / V4A)
- Acid resistant steel
- Steel
- Cast iron
- Non ferrous metals

EIGENSCHAFTEN · PROPERTIES

Hartmetall-bestückt für höchste Standzeiten
auch bei schwierigsten Materialien.

Ideal zum Senken in:

- Abrasive und harte Stähle über 1000 N/mm²
- Grauguss (GG) über 240 HB
- Rost- und säurebeständige Stähle
- Titan- und Titanlegierungen
- Alle weiteren Stähle, Guss und Leichtmetalle wo höchste Standzeiten erwünscht sind.

Tungsten Carbide tipped for maximum tool
life, even in most difficult materials.

For countersinking in:

- Abrasive and hard steel with a strength of over 1000 N/mm²
- Grey cast iron over 240 HB
- High-alloyed chromium steel such as stainless (V2A / V4A)
- Acid resistant steel
- Titanium and titanium alloys
- All further steel sorts, cast iron, non ferrous metals where maximum tool life are desired.

Die Führungsstifte ergeben hervorragende Stabilität und Genauigkeit.
Sollte ohne Führungsbohrer gearbeitet werden, bitte den Kegelsenker
100% mittig zur Bohrung ausrichten.

The pilots gives great stability and accuracy. If drilling without pilots,
please take care, that the countersink is adjusted absolutely centrally
to the drilled hole.

Dieser Kegelsenker wird geliefert mit:

- 4 Stück Hartmetall-Einsätze beschichtet inkl. 4 TORX Befestigungsschrauben sowie 1 TORX Befestigungsschlüssel komplett montiert.
- Die dreieckigen Einsätze sind drehbar. Somit sind alle 3 Schneidflächen einsetzbar für 3-fache Standzeit.
- **Passende Führungsstifte siehe unten.**

These countersinks comes inclusive:

- 4 pieces carbide inserts coated incl. 4 TORX mounting screws and 1 TORX wrench. Fully assembled.
- The triangular inserts are rotatable. This means that all 3 cutting surfaces can be used for 3 times more lifetime.
- **Suitable pilots pins see below.**

 Cutting data

EIGENSCHAFTEN · PROPERTIES

Hartmetall-bestückt für höchste Standzeiten auch bei schwierigsten Materialien.

Ideal zum Senken in:

- Abrasive und harte Stähle über 1000 N/mm²
- Grauguss (GG) über 240 HB
- Rost- und säurebeständige Stähle
- Titan- und Titanlegierungen
- Alle weiteren Stähle, Guss und Leichtmetalle wo höchste Standzeiten erwünscht sind.

Tungsten carbide tipped for maximum tool life, even in the most difficult materials.

For countersinking in:

- Abrasive and hard steel with a strength of over 1000 N/mm²
- Grey cast iron over 240 HB
- High-alloyed chromium steel such as stainless (V2A / V4A)
- Acid resistant steel
- Titanium and titanium alloys
- All further steel sorts, cast iron, non ferrous metals where maximum tool life are desired.

Die Führungsstifte ergeben hervorragende Stabilität und Genauigkeit. Sollte ohne Führungsbohrer gearbeitet werden, bitte den Kegelsenker 100% mittig zur Bohrung ausrichten.

The pilots gives great stability and accuracy. If drilling without pilots, please take care, that the countersink is adjusted absolutely centrally to the drilled hole.

Dieser Kegelsenker wird geliefert mit:

- 4 Stück Hartmetall-Einsätze beschichtet inkl. 4 TORX Befestigungsschrauben sowie 1 TORX Befestigungsschlüssel komplett montiert.
- Die dreieckigen Einsätze sind drehbar. Somit sind alle 3 Schneidflächen einsetzbar für 3-fache Standzeit.
- **Passende Führungsstifte siehe unten.**

These countersinks comes inclusive:

- 4 pieces carbide inserts coated incl. 4 TORX mounting screws and 1 TORX wrench. Fully assembled.
- The triangular inserts are rotatable. This means that all 3 cutting surfaces can be used for 3 times more lifetime.
- **Suitable pilots pins see below.**

KÜHLMITTEL-DRUCKFLASCHEN · COOLING PRESSURE BOTTLES

Zum Anschluss an alle Aufnahmehalter mit automatischer Innenkühlung (siehe Seite 521-523). Zusätzlich bieten wir eine Sprühnebeldüse an, welche ideal zum äußeren Kühlen geeignet ist.

- Nur wenige Pumpstöße nötig zum idealen Aufbau des Drucks
- Dank großvolumiger 1,5/3,0 Liter-Flasche wird der Druck auch bei vielen Bohrungen gehalten.
- Durch Feinjustierung, sparsamste Dosierung möglich ①
- Auch ideal zum äußeren Kühlen durch neue Sprühnebeldüse Art. 21 0025!
- Wir empfehlen Karnasch Hochleistungsschneidöl Mecutoil 100 (siehe ab Seite 1143).

For connection to all tool holders with automatic internal cooling (see page 521-523). In addition we offer an atomized nozzle, which is ideal for external cooling.

- You only need to use the pump a few times for obtaining an ideal pressure build-up
- Thanks to the large-volume 1.5/3.0 litre bottle the pressure will be maintained even in case of many borings.
- Best dosing economy thanks to fine adjustment ①
- Also ideal for external cooling due to the new atomized nozzle Art. 21 0025!
- We recommend Karnasch heavy-duty cutting oil Mecutoil 100 (see from page 1143).
